## 911 Locator Switch

## Application

The 911 Locator should be used in place of a standard single-pole switch to turn outdoor house or porch lights ON and OFF. In the 911 "flashing" position, the light becomes a house locator for police, medical personnel, emergency utility service, foul weather deliveries, etc.

- Illuminated toggle when switch is off.
- Toggle and attached load flashes when toggle in center position (in 911 mode).

## Helps Emergency Personnel Locate Address

Used in conjunction with your call for assistance, the 911 Locator solves the problem of night time house identification for emergency personnel. After you have placed your call for help, simply flick the switch toggle to the "911" position and your outdoor light will flash on and off continuously, cutting response time to insure effective action.

## Features

- Functions as a standard ON/OFF switch.
- Installs in minutes. Replaces any standard single-pole switch.
- 5" pre-stripped wire leads.
- All wire nuts and mounting hardware included.
- Transparent wall plate sticker included.
- UL20 Listed.
