

Volume 15: Solar Inverters and Electrical Balance of System

Powering Business Worldwide

Electrical Balance of System for Residential Installations

Our roots in the electrical business run deep. Eaton is a global technology leader in electrical components and systems for power quality, distribution and control. Our industry leading products and services are designed to deliver:

- Reliability
- Efficiency
- Safety

Powering Business Worldwide

Eaton Solar

One-stop BOS shopping

We can assemble a package of Balance of System (BOS) equipment that is ready to be installed. You will have one vendor, one purchase order, one delivery schedule and a single point of accountability.

- We can customize our solutions to the physical dimensions of your home
- Our BOS solutions will work with many photovoltaic (PV) panel manufacturers
- We offer a wide range of solar power solutions

Eaton product solutions combine:

- DC switching (UL98 and UL98B)
- Robust inverter technology – same reliable technology that is used in our UPS systems (UL1741)
- AC switching and protection

EATON'S ELECTRICAL BALANCE OF SYSTEM

- A** DC combiners and switches (600 Vdc)
- B** Solar inverters (600 Vdc)
- C** AC meter breakers, loadcenters and switches
- D** Electric vehicle charging
- Eaton Certified Contractor Network

Electrical Balance of System for Residential Installations

A DC combiners and switches (600 Vdc)

Eaton's solutions for protecting and switching DC current are designed and tested to meet UL1741, UL98 and UL98B requirements for solar electrical balance of system equipment.

B Solar inverters (600 Vdc)

Eaton's solar inverters use the same robust, reliable technology we put in our uninterruptible power systems (UPS). Solar inverters are designed and tested to meet UL1741 standards.

C AC meter breakers, load centers and switches

Eaton's AC switching and protection solutions are designed to meet 2008 NEC® Article 690.64(B)(2) sizing requirements for solar photovoltaic systems.

D Electric vehicle charging

Eaton is uniquely positioned to create a safe and reliable infrastructure that supports the use of electric vehicles. Our family of charging solutions is the most robust, flexible offering on the market.

DC combiner boxes

- Combines input photovoltaic strings forming a single output
- Options include string monitoring and surge protection

Solar inverters: 3.8 kW - 7 kW

- CEC rated for 97% efficiency
- Integral AC/DC switching with four-string combiner

Solar-ready meter breaker

- Complete family of circuit breakers for all applications

EV charging station

DC disconnect switches

- Isolates photovoltaic source
- Provides rooftop disconnect required by fire departments

Solar-ready loadcenter

AC disconnect switches

- Isolates utility feed

Eaton Certified Contractor Network

Electrical Balance of System for Commercial Installations

As your single-source supplier for a solar balance of system package, Eaton can help you build a solar system tailored to the needs of a retail, commercial or institutional site with a focus on:

- Reliability
- Efficiency
- Safety

We know space is always at a premium. That's why we offer totally integrated power control and management solutions like inverters and solar switchboards. These space-savings lineups house the system's DC switching equipment, solar inverter and AC switching equipment. The equipment is pre-configured for easy installation, saving space, time and cost.

We can also help you customize your electrical system package to the requirements of your facility, including the physical dimensions of your building or installation. In addition, our regional satellites and service centers are knowledgeable about local electrical codes and regulations in your area, which allows us to customize your solutions accordingly.

Eaton product solutions combine:

- DC switching (UL98 and UL98B)
- DC combiners (UL1741)
- Robust inverter technology
- AC switching and protection
- Integrated metering
- Customized packaging and pre-configuration

EATON'S ELECTRICAL BALANCE OF SYSTEM

- A** DC combiners, switches and switched combiners (600 Vdc)
- B** Solar inverters (600 Vdc) and solar transformers
- C** AC switchgear
- D** Monitoring and metering
- E** Electric vehicle charging
- F** Electrical solar services

Electrical Balance of System for Utility Installations

Our roots in the electrical industry run deep. As a bankable partner with 100 years of innovation, we are your single source supplier of electrical balance of system solutions to help improve:

- Reliability
- Efficiency
- Safety

Eaton provides complete electrical balance of system solutions from the combiners, to the inverter, to the medium voltage interconnection to the grid.

Our NEMA 3R enclosures and outdoor electrical houses help protect equipment from the elements and keep it operating.

Eaton can also help support solar farms once they are operating. We offer an extensive selection of operations training for electrical power systems equipment, and we are a leader in electrical safety training. We can even help monitor and manage solar system performance with our remote performance monitoring services.

Eaton product solutions combine:

- DC switching (UL98 and UL98B)
- DC combiners (UL1741)
- Robust inverter technology – same reliable technology that is used in our battery storage inverters
- AC switchgear
- Integrated metering
- Customized packaging and pre-configuration

Commercial and Utility Electrical Solar Services

Eaton's Electrical Services and Systems engineers can help manage the power of the sun. We offer the convenience of turnkey project teams who can design, build and support your solar power system.

Powering Business Worldwide

Design

Pre-installation services

Eaton's Electrical Services and Systems (EESS) team can help you choose a solar system that makes technical and financial sense. Our comprehensive solar site assessment service evaluates topics like optimal panel placement, estimated revenues and projected maintenance costs. And our experienced power system engineers can design a solar system that will always operate at peak performance.

Build

Installation services

Our field service engineers can install, start up and commission any manufacturer's solar power equipment quickly using our efficient, standardized processes. Your solar system will be up and running safely and reliably.

Support

Post-installation services

Eaton's remote performance monitoring services track solar power outputs and identify trends over time. That makes it easier to spot performance trends.

Additional services

Eaton offers many additional services that help keep workers safe and clean, reliable power flowing.

- Arc flash hazard analysis and solutions
- Power reliability studies
- LEED certification audits

Design

- Solar site assessments including technical and financial analysis
- Solar system design including shading and annual kWh output analysis
- Photovoltaic panel design
- Electrical balance of system design
- Monitoring system design (meters and software)
- Building connection and substation design
- Turnkey construction project management, including design and procurement services

Build

- Turnkey construction projects
- Photovoltaic panel installation
- Electrical balance of system installation
- Monitoring system installation (meters and software)
- Building infrastructure connection
- Substation construction
- Utility grid interconnection, synchronizing and controls
- Solar system commissioning and performance verification

Support

- Remote performance monitoring (metering and data collection)
- Ongoing energy production monitoring and rebate certifications
- Building energy audits
- Site power quality, load shedding and future expansion analysis
- Maintenance
- Operations training for site personnel
- Safety training

Dimensions, Weights and Ratings

Dimensions, weights and ratings given in this catalog **are approximate and should not be used for construction purposes**. Drawings containing exact dimensions are available upon request. All listed product specifications and ratings are subject to change without notice. Photographs are representative of production units.

Terms and Conditions

All prices and discounts are subject to change without notice. When price changes occur, they are published in Eaton's *Price and Availability Digest* (PAD). All orders accepted by Eaton's Electrical Sector are subject to the general terms and conditions as set forth in Appendix 1—Eaton Terms & Conditions.

Technical and Descriptive Publications

This catalog contains brief technical data for proper selection of products. Further information is available in the form of technical information publications and illustrated brochures. If additional product information is required, contact your local Eaton Products Distributor, call **1-800-525-2000** or visit our website at **www.eaton.com**.

Compliance with Nuclear Regulation 10 CFR 21

Eaton products are sold as commercial grade products not intended for application in facilities or activities licensed by the United States Nuclear Regulatory Commission for atomic purposes, under 10 CFR 21. Further certification will be required for use of these products in a safety-related application in any nuclear facility licensed by the U.S. Nuclear Regulatory Commission.

WARNING

The installation and use of Eaton products should be in accordance with the provisions of the U.S. National Electrical Code® and/or other local codes or industry standards that are pertinent to the particular end use. Installation or use not in accordance with these codes and standards could be hazardous to personnel and/or equipment.

These catalog pages do not purport to cover all details or variations in equipment, nor to provide for every possible contingency to be met in connection with installation, operation or maintenance. Should further information be desired or should particular problems arise which are not covered sufficiently for the purchaser's purposes, the matter should be referred to the local Eaton Products Distributor or Sales Office. The contents of this catalog shall not become part of or modify any prior or existing agreement, commitment or relationship. The sales contract contains the entire obligation of Eaton's Electrical Sector. The warranty contained in the contract between the parties is the sole warranty of Eaton. Any statements contained herein do not create new warranties or modify the existing warranty.

Powering Business Worldwide

Eaton is a global leader in power distribution, power quality, control and automation, and monitoring products.

At Eaton, we believe a reliable, efficient and safe power system is the foundation of every successful enterprise. Through innovative technologies, cutting-edge products and our highly skilled services team, we empower businesses around the world to achieve a powerful advantage.

In addition, Eaton is committed to creating and maintaining powerful customer relationships built on a foundation of excellence. From the products we manufacture to our dedicated customer service and support, we know what's important to you.

Solutions

Eaton takes the complexity out of power systems management with a holistic and strategic approach, leveraging our industry-leading technology, solutions and services. We focus on the following three areas in all we do:

- Reliability—maintain the appropriate level of power continuity without disruption or unexpected downtime
- Efficiency—minimize energy usage, operating costs, equipment footprint and environmental impact
- Safety—identify and mitigate electrical hazards to protect what you value most

Using the Eaton Catalog Library

As we grow, it becomes increasingly difficult to include all products in one or two comprehensive catalogs. Knowing that each user has their specific needs, we have created a library of catalogs for our products that when complete, will contain 15 volumes. Since the volumes will continuously be a work in progress and updated, each volume will stand alone. Refer to our volume directory, MZ08100001E, for a quick glance of where to look for the products you need. The 15 volumes include:

- Volume 1—Residential and Light Commercial (CA08100002E)
- Volume 2—Commercial Distribution (CA08100003E)
- Volume 3—Power Distribution and Control Assemblies (CA08100004E)
- Volume 4—Circuit Protection (CA08100005E)
- Volume 5—Motor Control and Protection (CA08100006E)
- Volume 6—Solid-State Motor Control (CA08100007E)
- Volume 7—Logic Control, Operator Interface and Connectivity Solutions (CA08100008E)
- Volume 8—Sensing Solutions (CA08100010E)
- Volume 9—Original Equipment Manufacturer (CA08100011E)
- Volume 10—Enclosed Control (CA08100012E)
- Volume 11—Vehicle and Commercial Controls (CA08100013E)
- Volume 12—Aftermarket, Renewal Parts and Life Extension Solutions (CA08100014E)
- Volume 13—Counters, Timers and Tachometers (CA08100015E)—Available in electronic format only
- Volume 14—Fuses (CA08100016E)—Available in electronic format only
- Volume 15—Solar Inverters and Electrical Balance of System (CA08100018E)

These volumes are not all-inclusive of every product, but they are meant to be an overview of our product lines. For our full range of product solutions and additional product information, consult Eaton.com/electrical and other catalogs and product guides in our literature library. These references include:

- The Consulting Application Guide (CA08104001E)
- The Eaton Power Quality Product Guide (COR01FYA)

If you don't have the volume that contains the product or information that you are looking for, not to worry. You can access every volume of the catalog library at Eaton.com/electrical in the Literature Library.

By installing our Automatic Tab Updater (ATU), you can be sure you always have the most recent version of each volume and tab.

Icons

Green Leaf

Eaton Green Solutions are products, systems or solutions that represent Eaton benchmarks for environmental performance. The green leaf symbol is our promise that the solution has been reviewed and documented as offering exceptional, industry-leading environmental benefits to customers, consumers and our communities. Though all of Eaton's products and solutions are designed to meet or exceed applicable government standards related to protecting the environment, our products with the Green Leaf designation further provide "exceptional environmental benefit."

Learn Online

When you see the Learn Online icon, go to Eaton.com/electrical and search for the product or training page. There you will find 100-level training courses, podcasts, webcasts or games and puzzles to learn more.

Drawings Online

When you see the Drawings Online icon, go to Eaton.com/electrical and find the products page. There you will find a tab that includes helpful product drawings and illustrations.

Contact Us

If you need additional help, you can find contact information under the Customer Care heading of Eaton.com/electrical.

Eaton Grid-Tied Solar Inverter (3.8–7 kW)

Product Overview

The Eaton Grid-Tied Solar Inverter’s breakthrough technology and features deliver maximum return on investment for consumers. Eaton solar inverter units offer the highest efficiency and voltage operating ranges available in order to maximize energy yield.

Installation time and costs are greatly reduced through packaging the combiner box, AC/DC disconnects and wire raceway with the inverter. The design also simplifies service on the unit through a two-piece modular configuration, which allows the wiring box to remain connected and mounted if the need ever arises to replace the power module.

Features and Benefits

Ratings

- 3800W, 4000W, 5000W, 6000W, 7000W

Maximum Energy Harvest

- 97% CEC efficiency
- Broad voltage operating range (105–500 Vdc) for superior performance in low light and high temperature environments
- Transformerless design

Saves Installation Time and Cost

- Integrated PV system AC/DC disconnect switch
- Four branch circuit-rated negative and positive fused inputs
- Integrated NEC®-compliant wire raceway

and Specifications

Page

V15-T1-3

Versatility in Installation

- Field-selectable voltage output: 208/240/277 Vac
- LCD display with side pushbutton for nighttime monitoring
- NEMA® 3R enclosure
- Two-piece modular design

Eaton Value

- A global leader in inverter technology
- Complete balance of system provider
- Eaton reputation for quality, support, and service
- Installation certification via Eaton Certified Contractor Network (ECCN)

Application Description

Available in four individual sizes: 4 kW, 5 kW, 6 kW and 7 kW respectively. The 4 kW unit has the ability to be field-converted to output 3.8 kW to accommodate lower rated AC loadcenters. This inverter family is to be used in grid-tied applications only, thus having the ability to feed power to the utility grid. The design focus of these residential/light commercial inverters was on maximizing energy harvest and minimizing installation time and cost. The inverters boast an extremely high efficiency and a wide DC voltage operating range, while fully integrating the complete balance of system into the unit, including a four-string DC combiner, a DC disconnect switch, an AC disconnect switch and a wire raceway.

Standards and Certifications

- ETL Listed (in compliance with UL® Std 1741)
- CSA® Listed (Std C22.2 No. 107.1)
- CEC Listed

Solar Power Center Loadcenters and Meter Breakers

Product Description

Eaton’s Solar Power Centers combine both utility power and solar photovoltaic (PV) power into one enclosure. Solar Power Centers can be applied as a component of a complete PV electrical system. Eaton offers the most complete line of Balance of System (BOS) products in the industry, along with a wide variety of configurations including loadcenters and meter breakers.

The Solar Power Centers feature industry-exclusive factory-installed permanent markings, which help to ensure National Electrical Code® (NEC) compliance. Required by the NEC, these markings enable quick and easy identification of product ratings and location of the parallel energy source disconnect. Prior to installation, contact your local utility to confirm approval.

Product Types

Loadcenters are enclosures specifically designed to house the branch circuit breakers and wiring required to distribute power to individual circuits. They contain either a main breaker when used at the service entrance point or a main lug when used as a sub-panel to add circuits to existing service. The main breaker protects the entire panel and can be used as a service disconnect. The branch breakers protect the wires leading to individual electrical loads such as fixtures and outlets.

Meter breakers are service entrance equipment that consist of a single meter socket and loadcenter (circuit breaker distribution section) or meter socket and main breaker combined in one enclosure. Sometimes called Combos, All-in-Ones, Meter Centers or Meter Mains, these units are increasing in popularity as the socket and loadcenter or main breaker are located in one location, thus providing the contractor with a labor and material savings when installing.

Meter breakers are most often sold in the western, southwestern and southeastern United States. The popularity of meter breakers is continuing to increase as more utilities deregulate and pass the responsibility of supplying watt-hour meter sockets on to the electrical contractor.

Application Description

How to Size a Solar-Ready Loadcenter or a Meter Breaker for your Solar Application

The National Electrical Code (2008) Section 690.64(B)(2)/ (2011) Section 705.12(D)(2) states: "The sum of the ampere ratings of overcurrent devices in circuits supplying power to a busbar or conductor shall not exceed 120 percent of the rating of the busbar or conductor."

For example: A 200A main breaker loadcenter + a backfed 70A PV breaker = 270A = 120% of the 225A busbar rating. In 2014, 120% was extended to 125% of the conductor rating.

Note: Check with local utility for exact requirements.

Panel Main Breaker Ampere Rating	Standard Bus Ampere Rating	Maximum Total Ampere Rating of all PV Backfed Mains	Maximum Ampere Rating of Panel Mains + PV Mains
100	100	20	120
100	125	50	150
125	125	25	150
200	200	40	240
200	225	70	270
225	225	45	270
400	400	80	480

Features and Benefits

Solar Power Center

- Up to 225A rated copper bussing maximizes solar source up to 70A for standard units
- 100A, 125A and 200A main breakers available factory installed, which provides additional flexibility in PV sizing
- Main breaker and PV backfed main are located at opposite ends of the distribution panel
- Single-phase, three-wire 120/240 Vac
- Overhead and underground feed applications
- Padlocking provisions
- Surface and flush designs available
- Top or bottom exit of load wiring
- Limited lifetime warranty for Type CH and 10-year warranty for Type BR

Loadcenters

- Type CH features plug-on neutral loadcenters and breakers that enable the contractor to connect the breaker directly to the neutral bar, eliminating the need for wiring a pigtail
- Type CH features unique stab design, which provides a tight connection to the bus
- Top or bottom feed
 - Straight-in wiring saves labor and material
 - Only one panel for either application—no modifications necessary
- Extra 1.50-inch (38.1 mm) knockout for bundling enables easier installation
- Drywall marking on enclosure indicates proper mounting depth for flush applications
- Unique sandalwood finish is aesthetically appealing with scratch-resistant powder coating
- Silver flash plated copper bus provides superior conductivity

Meter Breakers

- Meter socket and distribution section are located in one enclosure, which provides labor and material savings
- EUSERC / West Coast and Non-EUSERC designs
- Ring, ringless and lever bypass designs
- 7-inch-deep designs available, which is ideal for stucco homes
- Endwall knockouts are easily accessible for future wiring without damaging stucco

Standards and Certifications

- Complies with NEC (2008) Section 690.64(B) / (2011) Section 705.12(D), which identifies the acceptable installation and marking requirements for utility interactive solar inverters
- UL Listed
- Non-EUSERC
- EUSERC/West Coast

Charging Stations

Product Description

Eaton's established excellence in both the automotive and electrical distribution/control industries have created a perfect platform for all electrical vehicle charging needs. Whether it's a residential system, a commercial endeavor or a system to support fleet electric vehicles, Eaton has the products and the depth of experience to support, install and service electric vehicle chargers.

Features

- Eaton has been managing power systems (electrical, fluid, and air) for over 100 years
- Eaton is a Tier 1 Automotive Supplier. This connectivity with the major automotives enables Eaton to be on the forefront of emerging vehicle technologies
- Turnkey installation solutions through Eaton Engineering Services (EES) and Eaton Certified Contractor Network (ECCN) throughout the United States and Canada
- Eaton is the only provider of a full family of electric vehicle charging products
- Eaton provides a one stop solution for all your electrical distribution needs
- Restricted accessibility options such as credit card and radio frequency identification (RFID)

Level 1 Universal Receptacle

Product Description

Eaton's 120 Vac Level 1 Universal Receptacle Charging Station provides a safe, reliable means for charging up to four vehicles at a time. It is the perfect solution for buildings that require multiple-vehicle charging, such as apartments and offices.

This innovative charging station provides a universal receptacle for up to four EVs. It's perfect for charging electric cars, e-bikes, NEVs, electric service vehicles and golf carts, simultaneously. For applications that require more than four vehicles to be charged, Eaton's Level 1 Universal Receptacle Charging Stations can be connected in a series with optional utility-grade sub-metering.

Features

- Perfect for charging electric vehicles (with their respective cordsets), e-bikes, NEVs, electric service vehicles, and golf carts
- 110/120 Vac
- 20, 40, and 80A units available
- Charge up to four vehicles
- Pedestal and bollard styles available
- Locking provision to prevent cordset theft
- Support hook to prevent unintentional unplugging with heavier EV cordsets

Standards and Certifications

- NEC 625 compliant
- UL Listed to UL 2594 for EV use

- Charging stations can be connected in series
- NEMA 5-20 T-slot receptacles
- Rugged stainless steel construction
- Indoor/outdoor rated
- Optional LED lighting available
- Optional utility grade sub-metering
- Customization available

Product Description

Eaton offers a full family of reliable, responsible electric vehicle (EV) chargers for residential applications. Our established excellence in the automotive and electrical distribution and control industries allows us to provide a wide range of innovative EV charging solutions to suit your individual needs. In addition, the Eaton Certified Contractor Network (ECCN) can provide turnkey services, from design to installation.

This 120 Vac charging station provides an economical and versatile EV charging solution.

Features

- Provides an economical and versatile solution for charging electric vehicles
- 110/120 Vac
- 16A units available
- Wallmount and pedestal styles
- Quick and easy installation
- Rugged stainless steel construction
- Indoor/outdoor rated
- Auto-reset feature

Level 2 Charging Station

Level 2 Charging Station

Product Description

Using an industry standard J1772 30A or 70A connector, the Level 2 charging station will easily fill a depleted all-electric vehicle battery in three to four hours while the owner is working, shopping or sleeping. The Level 2 charging station is ideal for residential or commercial EV charging applications.

Features

- Charge electric vehicles up to 5 times faster than with a vehicle's cordset
- 208/240 Vac
- 16 and 30A units available
- Wallmount and pedestal styles
- Quick and easy installation
- Rugged stainless steel construction
- Indoor/outdoor rated
- Auto-reset feature
- Hardwire connected
- Optional advanced cord management to protect SAE J1772 connector

Electric Vehicle Simulator

Product Description

To ensure correct installation of Electric Vehicle Chargers, Eaton introduces the EVSE Electric Vehicle Simulator. Eaton's EV Simulator allows installers to immediately test the functionality of the EVSE on-site during installation.

Features

- Confirm proper operation of any J1772 compliant EVSE without the need of an actual electric vehicle
- Rugged case is perfect for service personnel
- Easy-to-follow testing instructions printed on unit
- Ready to charge
- Ground fault simulation
- Charging indicator
- Pilot signal test points for oscilloscopes

Electric Vehicle Charging Station Pedestal

Product Description

Plug-in electric vehicles are becoming popular due to rising fuel costs and environmental concerns.

Eaton's EV Charging Station provides a safe and reliable means to quickly power up electric vehicles.

Features

- EV Charging Pedestals ship with EV Chargers mounted and pre-wired
- Single or dual EVSE pedestal options
- Available with Eaton Level 1 and Level 2 charging stations
- Quick and easy installation
- Rugged stainless steel construction
- Indoor/outdoor rated
- Standard 24 foot cord
- Optional utility-grade sub-metering
- Greater flexibility for external installations
- Dual EVSE pedestal option allows for multiple vehicle charging
- Customization available

Power Xpert Solar 250 kW Inverter

Product Description

The Eaton Power Xpert Solar 250 kW Inverter incorporates Eaton’s programmable logic controllers (PLCs), advanced variable frequency drives and protective relays. Every critical component inside the Power Xpert Solar 250 kW Inverter is proven to be reliable based on the known life cycles of high volume industrial and electrical control equipment.

Engineered for ease-of-installation, operation, and maintenance, the Power Xpert Solar 250 kW Inverter contains the intelligence to automate the commissioning, operation, and shut down procedures with minimal physical action. These robust utility-interactive three-phase inverters are based on Eaton’s mature motor-drive assembly featuring Eaton’s Active Front End® (AFE) control technology.

The Power Xpert Solar 250 kW inverter is designed specifically for 480 Vac three-phase utility (grid) applications and 600 Vdc (open circuit) PV systems. It is an excellent choice for either indoor or outdoor installations from a company known for its state-of-the-art electrical products and industry support.

- CEC 96% efficiency
- >99% MPPT efficiency—3rd Party verified
- Earliest startup—latest shutdown with DC excitation and zero load grid sync
- Minimized offline nuisance events with superior fault tolerance of a utility grade electric protection relay

Features and Benefits

Dual-Stage 250 kW inverter with hysteresis, 2 x 125 kW design, provides optimum efficiency in lower irradiance conditions. Offers less stressful power-stage operation for improved inverter longevity. Seamless dual-inverter operation.

Grid Sensor based vector control ensures precise synchronism and fast response to grid dynamics, ensuring a stable operation and an improved solar energy harvesting.

Advanced Proportional Integral Derivative (PID) control enables precise synchronization to the grid, finer current and power limits. Improved temperature limits, better reactive power or power factor control.

DC excitation algorithm and system control Smart PV energy utilization over wasteful utility-based methods of energizing the transformer. Faster morning “wake-up” and power export. Faster mid-day re-connect improves energy harvesting during utility anomalies and outages, minimal-stress “zero-crossing” grid connection process, less part-count for improved solar-system reliability.

Large DC bus capacitors smart, extremely low ripple-current on the PV array makes for a better, trouble-free solar-module operation. Reduced stress on solar modules and wiring control algorithm ensures lower stress on isolation transformer over adverse environmental conditions.

Inverter re-combiner box with DC circuit breaker option available:

- Optional inverter re-combiner box with DC breakers to meet NEC® 2011 requirements for safe DC disconnect, eliminating the need for external DC disconnects
- DC breaker option eliminates the need to replace DC fuses, allowing cost and time savings (lowering O&M costs)
- Current sensing of each DC input is available for array zone monitoring; DC input current is reported to inverter controller, which makes it available via Modbus®

- DC breakers can be individually turned off, allowing isolation of a defective sub-array while allowing other sub-arrays to operate. This feature enhances de-bugging procedures and maximizes fault-tolerance
- DC breakers are available on different configurations and ampacity (90A DC, 100A DC, 125A DC, 150A DC, 175A DC, 200A DC and 225A DC)

Inverter grounding bus

on DC and AC sides allows installation as per NEC 690.47 (C) (1), (2), or (3), should the facility POCC have a bonded equipment-ground to the facility's grounding electrode system.

Maximum power point:

Fast (mSec based) response time with variable step-size control reacts to sudden changes, improved current response for low-irradiance periods, sudden-onset shading and grid outages, superior solar-energy harvesting

Isolation-transformer-based solar inverter which operates with all photovoltaic modules (technologies), negative and positive grounded PV systems.

Eaton Logic Controller (ELC) watch-dog system

that ensures greater system integration and information response for display and stored performance data. It Isolates controls from external interference (anti-hacking)

Rich standard features and options list

- Full-load DC switch disconnect and AC breaker, lockout/tagout compatible
- Lockable display and controls door with window sealed against the elements
- Configurable utility connection
 - Three-wire delta (A/B/C), no neutral required
 - Four-wire wye (A/B/C/N), N-sensing only
- 100 kA surge protection
- 200 kAIC AC breaker
- Large DC and AC conductor gland plates on bottom and immediate sides
- Color, menu-driven display
- Indicator lights (LEDs) and selection switch
- Remote, field-duplicable up-fits
 - Remote indicators (LEDs)
 - Remote OFF (shutdown)
- AC view-window for visible blade disconnect
- Infrared inspection ports for DC and AC cabinets
- CEC approved 2% PBI power meter
- Internal heater for humidity and cold temperature control
- Multiple DC input (combiner) with fuse and breaker options
- SunSpec Alliance compatible monitoring (gateway)

Two-cabinet design Inverter and isolation transformer

that enables integration into electrical rooms, provides better package for roof-top installations, is easier to receive, lift, transport and secure, design category(s) seismic complaint, terminated transformer cables included.

Easy maintenance by Eaton's Electrical Services & Systems (EESS)

- No ladder required to service cooling-system air filters; ground-level access
- Three-door design ensures wide opening for limited-access locations
- Country and worldwide local services

Commissioning support

through country and worldwide local services.

Remote monitoring interface

support via Modbus/TCP with an RJ 45 plug, and a terminal block supplying additional I/O and a 120 Vac power supply for compatibility with third party monitoring applications.

Advanced anti-islanding function, which prevents the operation of the inverter in the event of a utility outage.

AC overcurrent protection and safety inverter

is equipped with a 200 kAIC AC breaker that is operable from the outside of the unit via lockout/tagout-capable handle.

No need for AC fuse replacements, minimizing O&M costs.

Inverter doors are fitted with mechanical interlocks that will safely shut down the inverter if doors are opened.

Human Machine Interface (HMI):

A color touch screen LCD display that represents the status screens during normal operation and additional screens with password protection for access to configuration, troubleshooting, and service.

Standards and Certifications

- UL® 1741 2nd Edition January 2010
- IEEE® 1547
- NFPA 70, National Electrical Code® (NEC)
- CEC Listed (California Energy Commission)
- Seismic qualified to IBC/CBC

AC Output Specifications—Factory Default

Description	Specification
Maximum continuous output power	250 kW
Weighted efficiency (CEC)	96%
Maximum continuous output current	312A
Maximum fault current output	365A for 8ms
Maximum branch overcurrent protection	400A ^①
Nominal operating voltage	Three-phase 480 Vac
Operating voltage range	423–528 Vac
Nominal operating frequency	60 Hz
Operating frequency range	57.0–60.5 Hz
Tare loss	70W
Total harmonic distortion	< 3% THD
Power factor	> 0.99
Utility connection	Delta three-wire (A,B,C); wye four-wire (A,B,C,N) ^②

DC Input Specifications

Description	Specification
DC maximum input voltage	600 Vdc
DC maximum power point tracking range (MPPT)	300–500 Vdc
DC operating range	300–600 Vdc
DC input start	400 Vdc ^③
DC operating current nominal	860A
Maximum DC ISC input	1340A
Factory configured PV array grounding	Positive/negative

Mechanical Specifications

Description	Specification
Operating temperature range without power fold back	–20° to 50°C
Storage temperature range	–30° to 70°C
Enclosure rating	UL Type 3R
Enclosure(s) construction	Polyester powder coated cold rolled steel
Relative humidity	0 to 95% noncondensing
Inverter weight	4000 lbs (1814 kg)
Transformer weight	2850 lbs (1293 kg)
Inverter envelope dimensions in inches (mm) H x W x D	94.00 x 93.00 x 46.00 (2387.6 x 2362.2 x 1168.4)
Transformer dimensions in inches (mm) H x W x D	64.00 x 50.00 x 40.00 (1625.6 x 1270.0 x 1016.0)
Inverter and transformer mounting	Pad mount—not free standing
Isolation transformer—external	Delta/wye
Cooling	Air convection
Max altitude (before potential derating)	3300 ft (1000m)
Air flow/inverter	1700 cfm ^③
Seismic rating successfully evaluated	Seismic qualified to IBC/CBC

Certifications

Description

Power Xpert Solar 1500/1670 kW Inverter

Product Description

The Power Xpert® Solar MW scale inverter is a rugged, robust and reliable solar inverter designed with Eaton engineering’s 100-year tradition of safety and reliability. Designed for utility applications the Power Xpert Solar 1500/1670 is the world’s largest PV inverter and sets the new standard in reliability and performance.

The inverter is outdoor-rated, and no extra shelter (canopy) or environmental protection is needed in order for the equipment to sustain operation in harsh environments (rain, dust, snow and sun). This makes the Power Xpert Solar inverter not only an economical and cost-effective solution but capable of rapid deployment and installation.

Availability is optimized by a complete fault tolerant design. This inverter is composed by three blocks of 500 kW (555 kW), which can be individually isolated in the unlikely event of a fault, allowing the inverter to operate at partial power until field service arrives on site. This provides for higher reliability and availability than using multiple smaller inverters.

The Power Xpert Solar inverter provides the most cost-effective solution in the market for the following reasons:

- Fully outdoor rated enclosure—no extra shelter or environmental protection needed

- Inverter includes:
 - Recombiner box with fuses
 - Load brake rated DC disconnect switches
 - AC circuit breaker for AC disconnection
 - AC and DC surge suppression
 - True MW design— one inverter is needed for 1.5 MW/1.67 MW station providing the lowest cost of installation and operation:
 - Fewer cement pads, less excavation and less cement
 - Reduced field labor for cabling and wiring due to fewer units needed
 - Direct-coupling, throat connection with step-up transformer
- Fault tolerance design— inverter is able to run at partial power (1/3, 2/3 of full power)
- High reliability due to conservatively rated components, film capacitors and liquid cooling
- No active power de-rating for up to ±0.91 power factor support
- SCADA communication via Modbus® TCP

Features and Benefits

- True MW scale inverter allows for maximum cost savings on installation of inverter and transformer. It also enables a skidless solution as there is only one inverter and a simple pad-mount transformer to be installed
- Inverter can be configured as a 1.5 MW or 1.67 MW for maximum output power optimization. Depending on the MPPT range for the array, the inverter output power can be set to 1.5 MW or 1.67 MW
- Power factor support at rated power. The inverter will supply full rate power (1.5 MW or 1.67 MW), and still provide support for up to a ± 0.91 power factor range. This provides cost optimization especially on projects with a power factor support requirement
- Maximum flexibility on grid support. Power Xpert Solar grid and frequency ride through settings are flexible and can be changed to meet local utility or special grid requirements
- Maximum DC/AC ratio (array I_{sc}): Maximum array short-circuit current (I_{sc}) cannot be higher than 4480 ADC. As long as this limit is maintained, the inverter warranty will not be voided
- The inverter voltage and frequency disturbance characteristics are set and controlled by a widely accepted protection relay SEL-751A. This device is well known by utilities and enables one extra protection layer for safe inverter shutdown under abnormal grid conditions
- Direct-coupling throat connection between the inverter and transformer enables cost savings on cables, conduits and pad installation. The throat connection has been implemented using Eaton's vast experience on low voltage switchgear with connection to a step-up transformer
- DC grounding configuration is available as positive and negative schemes
- A recombiner box with maximum flexibility is available. The standard configurations for number of DC inputs, DC fuse current and cable size are shown in the Catalog Number Selection graphic on **Page V15-T2-10**. The DC fuse ratings available are 160 A, 200 A, 250 A, 315 A, 350 A, 355 A and 400 A
- Array Zone monitoring is possible with the option of current sensing on each DC input. This option allows current monitoring of the ungrounded DC polarity inputs. Each DC input current measurement is stored on the internal inverter controller and available to a plant monitoring device via Modbus TCP
- Fiber optics communication connection is available for large plants, where inverter stations are placed at a far distance from the plant central controller or monitoring device
- Optional auxiliary I/O ports provide an effective way of cost-savings when external devices need to be monitored, such as step-up transformer measurements (liquid temperature, pressure and level). The standard offering is 6 digital inputs and 1 analog input. Other options are available, please consult factory
- A revenue grade meter in the low voltage side of the step-up transformer is also present as an option. Please consult an Eaton representative for further information

Standards and Certifications

- The 1500 kW and 1670 kW inverters are certified by Intertek per UL® 1741

600 Vdc Single-Pole Disconnects

Product Description

Eaton’s offering of PV switches have multiple poles factory-wired, and they are approved for NEC Article 690 applications right from the box. Other manufacturers require the contractor to add jumpers to a two- or three-pole switch, add a neutral, and add labels to meet this requirement. For fusible switches, the Eaton PV single-pole switch requires only one fuse per switch—saving the customer at least one fuse on each switch.

Application Description

When photovoltaic panels convert the sun’s energy into electricity, the power generated is direct current (DC). Typically, the systems are designed with DC system voltages in the 400–600V range. This is much higher voltage than typically found in building systems. The higher voltage, when combined with the lack of a current sine wave with zero crossings, creates a number of challenges in wiring, particularly when switching circuits on and off.

DC circuits consist of two wires—a positive and a negative. In most PV systems, one of these wires is grounded (like a neutral in an AC system). Which of the two wires is grounded is specified by the solar panel manufacturer. The more common application is a negative ground, and the location of this bond is usually found at the inverter. Per the National Electrical Code (NEC) Section 690.5(A), only the current-carrying ungrounded conductor should be switched. Thus, in a negative-grounded system, only the positive wire is switched.

Unlike AC systems that possess a current sine wave with zero crossings, the interruption of higher voltage DC circuits requires an increased air gap to safely and quickly interrupt and break the arc. Within this family of switches, the increased gap is accomplished by wiring multiple poles of a single switch in series for safe arc interruption. The UL 98 listing of these products does not permit multiple circuits to be switched by one switch.

2.3

DC Disconnects

600 Vdc Single-Pole Disconnects

2

Features

Standard Features

- All switches are single-pole and suitable for switching one circuit
- Clear polycarbonate deadfront to guard against accidental contact with live parts
- NEC 690.17-compliant labeling warning that the switch terminals may be energized in the open position
- NEC 690.14.(C) 2 required "PV System Disconnect" label included
- Isolated ground terminals (neutral) for grounded conductors
- Ground lug for equipment grounding conductor
- NEMA 3R, 12 and 4X stainless enclosures
- Fusible and non-fusible configurations—Class R fuse clips standard
- Fuse clips are located on the center pole to ensure that both fuse clips are de-energized—meets NEC Article 690.16, which requires isolation of the fuse from all potential supply sources
- Available for Flex Center modifications (windows, pilot lights, 316 grade stainless, and so on)

Standards and Certifications

- UL 98 listed
- Marked as suitable for NEC 690 PV applications up to 600 Vdc
- OSHPD Special Seismic Certification Preapproval (OSP)

600 Vdc Per Pole and 1000 Vdc Disconnects

Product Description

The latest addition to Eaton's solar disconnect family of products is the UL Listed 600 Vdc per pole, bi-directional disconnect. Listed to the UL 98B standard, this design has the capacity to switch multiple circuits of up to 600 Vdc each. Also included in the line are 1000 Vdc disconnects, designed for use in large scale projects where the higher voltage helps drive improved efficiencies.

The use of renewable energy sources is on the rise. Photovoltaic (PV) systems are among the fastest growing of the new green technologies, and they are being installed on a variety of building types and landscapes throughout North America. This results in a growing need for products to meet the requirements of these systems. Eaton's lineup of 600 Vdc per pole and 1000 Vdc switches are tested and listed to the rigorous UL 98B standard, in line with NEC 690 Code requirements for PV installations.

Application Description

Switching devices primarily designed for DC service require design features to increase the total arcing voltage. This can be achieved by designing larger single air gaps and multiple gaps in series, or by using magnetic fields to force arc movement. In this safety switch design, Eaton uses magnetic fields, created with the use of permanent magnets, to stretch the arc. These products are not polarity sensitive, so they can be used on either negative or positive grounded systems, and they provide protection regardless of whether the current flow is in the "normal" direction or is reversed (possible due to miswiring or under a fault condition).

Note: Photos shown above—
Left: 60A, 3 circuit, 600 Vdc per pole, NEMA 3R.
Right: 200A, 4 circuit, 600 Vdc per pole, NEMA 4, w/ isolated grounded return terminals.

Grounded PV systems

A large number of PV systems in North America to date are grounded systems. These systems will be either positive grounded or negative grounded. In a positive grounded system, the disconnect will switch (break) the negative (-) conductor only. Conversely, in a negative grounded system, the disconnect will switch (break) the positive (+) conductor only. It is important that the disconnect applied within a grounded PV system be properly rated for that specific system. Eaton's lineup of switches (600 Vdc and 1000 Vdc) are designed and UL Listed for use in both positive and negative grounded applications—one switch can be used on either system.

Ungrounded PV systems

Somewhat less common today are ungrounded (floating) PV systems. These use transformerless inverters and, relative to the disconnects within the system, both the positive (+) and the negative (-) conductors are switched. Eaton is proud to also offer a series of disconnects (600 Vdc and 1000 Vdc) for ungrounded systems.

Safety

The incorporation of the modified heavy duty safety switch mechanism provides a visible means of disconnect when the switch handle is in the OFF position. Blade disengagement from the stationary contact can be seen when viewing the switch base.

Features

Standard Features

- UL Listed to the UL 98B standard
- Marked as suitable for NEC 690 PV applications per UL 1741 requirements
- Suitable for use on positive and negative grounded systems, not polarity sensitive
- Bi-directional functionality; will break high-energy DC arc regardless of direction of current flow
- Ampacity range—30, 60, 100, 200 and 400A
- Clear polycarbonate deadfront shield
- Equipment ground
- NEMA 3R, 4 and 4X stainless steel enclosures
- Flex Center modification available, such as viewing windows, pilot lights and more

600 Vdc Specific Features

- First UL Listed 600 Vdc per pole, bi-directional solution in the market
- 2-, 3-, 4- and 6-circuit configurations for grounded systems
- 1-, 2- and 3-circuit configurations for ungrounded systems
- Fusible and non-fusible
- Grounded configurations include isolated return terminals. Exceptions include 6-circuit 30, 60, 100A, and 4-circuit 400A
- Suitable for use on a circuit capable of delivering up to 10,000A, 600 Vdc

1000 Vdc Specific Features

- 1-, 2- and 3-circuit configurations for both grounded and ungrounded systems
- Fusible and non-fusible
- Factory-installed jumpers
- Grounded configurations include isolated return terminals. Exceptions include 2-circuit 400A
- Suitable for use on a circuit capable of delivering up to 10,000A, 1000 Vdc

Standards and Certifications

Listed to the UL 98B standard in-line with NEC 690 Code requirements for PV installations.

Catalog Number Selection

DC Disconnects

Note

① Not all configurations for ampere rating and number of circuits are available. All circuit configurations can be found in the product dimension tables.

Pow-R-Line C Distribution Switchboards

Product Description

Eaton’s Pow-R-Line C distribution switchboards combine a space-saving design with modular construction and increased system ratings to provide economical and dependable electrical system distribution and protection.

Application Description

Whether providing access for solar systems to main distribution systems or combining outputs of multiple inverters, Eaton’s Pow-R-Line C switchboards are available for customization for many applications, including backfeed scenarios.

Refer to Eaton’s *Consulting Application Guide*.

Features, Benefits and Functions

Pow-R-Line C designates a family of distribution switchboards, incorporating design concepts that fit the ever-increasing need for applications on high short-circuit systems, while retaining maximum safety and convenience throughout the line.

- 6000A maximum main bus rating
- 600 Vac and below
- 600 Vdc and below
- Front or rear accessible
- Type 1 or Type 3R enclosures
- ANSI-61 gray powder coat paint finish
- Microprocessor-based metering and monitoring devices
- Utility metering provisions
- Surge protective devices (SPD)
- Ground fault protection on mains and distribution devices
- Busway and transformer connections
- Complete protective device accessory capability
- 65 kAIC bus bracing standard; optional 100 or 200 kAIC
- Standard tin-plated aluminum bus; optional copper- or silver-plated copper bus
 - Standard bus ampacities based on UL heat test ratings. Optional density rated bus systems are also available

Main and Individually Mounted Devices

- Magnum® SB insulated case circuit breakers, 800–5000A, fixed or drawout
- Magnum DS power circuit breakers, 800–5000A, fixed or drawout
- Molded case circuit breakers, 400–2500A, fixed mounted
- Bolted pressure switches, 800–5000A
- FDPW fusible switches, 400–1200A

Group-Mounted Distribution Devices

- Molded case circuit breakers, 15–1200A
- FDPW fusible switches, 30–1200A

Front Accessible

Front-accessible switchboards align at the rear, enabling them to be placed against a wall (Pow-R-Line C front accessible). If the main section is deeper than others, due to physical size of the main device, the necessary off-set in line-up will occur in front, and the main section will be accessible from the side as well as from the front. Standard front accessible switchboards will align at the front and rear.

Rear Accessible

Rear-accessible switchboards align at the front and the rear. Bus maintenance and cable entry and exit require rear access.

Standard Switchboard Height

Standard Pow-R-Line C switchboard height is 90 inches (2286.0 mm).

Group Mounting

Group-mounted circuit protective devices are an assembly of units mounted on a panelboard type base (panelboard construction). Units may be molded case breakers, or FDPW fusible switches. Circuit protective devices are accessible from the front.

A main molded case breaker or main FDPW fusible switch, within the sizes listed for panelboard design, can be included in the panel-mounted assembly in lieu of a separate, individually mounted unit.

Space Only for Future Devices Group-Mounted Construction

Where space only for future circuit protective devices is required, the proper space and a blank filler plate will be supplied. Connections and mounting hardware are not included.

Provision for Future Devices

Where provisions for future circuit protective devices are required, space for the device, corresponding vertical bus, device connectors and the necessary mounting hardware will be supplied.

Busbar System

Standard bus in the switchboards is tin-plated aluminum. Silver-plated copper and tin-plated copper are also available.

Main bus and sub-main buses meet UL and NEMA standards for temperature rise on all Pow-R-Line C switchboards. Special bus densities are available.

Overcurrent Devices

To properly select and size overcurrent devices for use in a switchboard, the allowable temperature rise must be taken into account as to its effect on the tripping characteristics of the devices in question.

Accordingly, Article 220 of the NEC requires overcurrent devices to be rated not less than 125% of the continuous load they are protecting. To comply with this, an 80% derating factor must be used with all overcurrent devices such as molded case breakers and FDPW fusible switches unless they are tested and marked as 100% rated devices.

Short-Circuit Rating

Standard bus and connectors on all switchboards are rated for use on systems capable of producing up to 65,000A rms symmetrical short-circuit current at the incoming terminals.

Increased bus short-circuit ratings equal to that of connected switchboard devices, up to 200,000A rms symmetrical, are available in most Pow-R-Line C switchboards when approved main devices are installed. Contact Eaton for more information. UL labeled switchboard sections are marked with their applicable short-circuit rating.

Provision for Busway Entrance and Exit

Busway connections to switchboard sections include cutout and drilling in the top of the switchboard with riser connections from the switchboard device or bus, up to the point where the bus duct enters the switchboard. No connections are furnished external to the switchboard.

Note: In all transactions involving busway attached to switchboards, it is essential that information regarding orientation of the busway with respect to the front of the switchboard be supplied to the coordinating assembly plant.

On Pow-R-Line C switchboards, solid busbar is used to connect the bus duct to the individually mounted main device, main or sub-main switchboard bus, or vertical main bus of panel mounted circuit protective device panels. Busway fed by group-mounted branch devices are cable connected.

Aluminum riser connections are standard. Copper- or silver-plated copper is available as a modification.

Transitions

Transition structures are required for connecting switchboards to the secondary of power center transformer (dry or liquid filled), motor control centers, and for other special switchboard configurations such as “L” or “U” shaped lineups. In some applications, an extra structure complete with connections is required; in others, where switchboard depth and space permit, only the connection conductors are required. Refer to factory for these applications.

Standards and Certifications

- Meets NEMA Standard PB-2 and UL 891
- Seismically qualified

Integrated Facility Switchboard

Product Description

Eaton’s Integrated Facility Switchboards use the modular Pow-R-Line C group-mounted switchboard design to integrate traditionally separate electrical distribution and control equipment into a single space-saving factory assembled and connected package.

The service entrance equipment can be integrated with multiple lighting and appliance branch panelboards into a compact front-accessible group-mounted switchboard. Where multiple panelboards are used in the same electrical room as a conventional distribution switchboard or power panelboards, the integrated design will significantly reduce equipment space requirements, as well as reduce installation time and cost.

Other associated equipment can also be integrated into the assembly, including dry-type distribution transformers, time clock space, lighting control, electronic controls, surge protective devices, metering and energy monitoring devices. Depending upon the application, other user-defined equipment such as a subsystem control package may also be incorporated.

Application Description

Eaton’s Integrated Facility Switchboards are designed to meet specific needs for:

- Solar/alternative energy integration projects
- Retail chain stores
- Commercial offices
- High rise buildings
- Correctional facilities
- Agricultural facilities
- Industrial facilities
- Hospitals/health care facilities
- Educational facilities

Whether the application is a multi-site prototype or single application, integrated switchboards offer time and space-saving features.

For complete application description, refer to Eaton’s *Consulting Application Guide*.

Features, Benefits and Functions

Front Accessible

Integrated Facility Switchboards are front accessible and align at the rear, enabling them to be placed against a wall. Most switchboards align at the front and the rear. If the main section is deeper than others, due to physical size of the main device, the necessary off-set in line-up will occur in front, and the main section will be accessible from the side as well as from the front.

Standard Switchboard Height

Switchboard height is 90 inches (2286.0 mm).

A limited offering of 78-inch (1981.2 mm) high equipment is available. Consult the factory for specific applications.

Switchboard Shipping Splits

The sections can be shipped as specified by the customer to meet specific requirements.

For retrofit applications, single-piece switchboard structures can be shipped to facilitate movement through limited access doorways, etc.

Factory Interconnections

Most sub-panels are fed from the main distribution panel feeder circuit breakers using copper cable sized per the NEC and UL.

Space Savings

The space-saving switchboard installation provides additional usable floor space. For example:

- Retail stores—floor space for sales
- Offices—additional storage, cubicle
- Health care—additional work area
- Retrofits—ability to fit existing rooms

Site Construction Savings

Timely installation of the electrical system typically is a key element on the critical path for any project.

Along with the time to install the equipment, other expenses include the time to handle all of the loose pieces of equipment arriving on a job site and ensuring it reaches the proper trades person. With Eaton's Integrated Facility Switchboards, one piece of equipment is typically shipped to a job site virtually eliminating these issues.

The equipment may also be used for temporary power on job sites, further reducing construction expenses and times.

Standards and Certifications

- Meets NEMA Standard PB-2 and UL 891
- Panelboards mounted inside the sections meet NEMA PB-1 and UL 67
- Other equipment is UL listed as applicable and appropriate

Product Selection

For complete application and pricing information, contact your local Eaton sales office.

Type PRL1a Panelboard

Product Description

Eaton's EZ Box™ and EZ Trim™ represents the first significant change in panelboard box and trim designs in more than a half-century. The EZ Box and EZ Trim have been designed for faster, more secure and safer installations. The new EZ Box and EZ Trim are provided standard for Eaton's Pow-R-Line 1a and Pow-R-Line 2a lighting panelboards, as well as the Pow-R-Line 3a and Pow-R-Line 3E mid-range panelboard.

Flange Detail

Features

- Virtually eliminates sharp edges
- Trim installs in seconds rather than minutes
- Door-in-door is standard
- Ability to adjust flush box to wall irregularities
- Trim installs without the need for tools
- No exposed hardware (because there is none)

The EZ Box flanges are bent and painted, which virtually eliminates the sharp edges associated with traditional boxes. Additionally, all steel panelboard chassis parts are painted. This significantly reduces potential injury for material handlers and installers. Each flange is adjustable outward up to 3/4-inch (19.1 mm). This feature allows the installer to adjust flush box applications to be level and flat with the finished wall after the wall material is installed to help correct wall irregularities. The new box flange also provides the means for attaching the EZ Trim.

Standalone Trim and Bottom Flange Hanger with Notch

Corner Flange Detail

Fast Installation

The EZ Trim incorporates a groundbreaking design that installs in seconds, rather than minutes. The standard trim features include door-in-door construction; no exposed hardware and no tools are required for installation.

Each EZ Trim includes hangers attached on the right side. The bottom trim hanger has a notch in its base. To install, the bottom hanger is inserted into the bottom right side box flange opening, resting the notch on the flange.

Trim Hanger Inserted Into Box Flange

The balance of the hangers are aligned with the other flange openings and pushed in. When all hangers are in the box flange, the trim is lifted up slightly to clear the notch on the bottom hanger, and the trim is self-supported on the EZ Box.

The installation is completed by swinging the trim to the closed position, then lifting and pushing slightly to the right. The trim will drop into place totally secured. The multi-point catches on the left side of the trim will lock into the left side box flange openings.

To prevent the trim from being removed by non-authorized persons, a unique sliding means automatically latches in place when the trim door is closed. Along with a new lock, the EZ Trim offers a high degree of door security.

Standards and Certifications

When used with Eaton's panelboard chassis, EZ Boxes and EZ Trims meet the following applicable industry standards:

- UL 50 listed
- NEMA Standard PB1
- Federal specifications
- National Electrical Code

Product Description

Distribution Panelboards

Eaton's assembled panelboards are designed for sequence phase connection of branch circuit devices. This allows complete flexibility of circuit arrangement (single-, two- or three-pole) to allow balance of the electrical load on each phase.

Sturdy, rigid chassis assembly ensures accurate alignment of interior with panel front; prevents flexing and minimizes possibility of loosening or damage to current carrying parts during and after installation.

Four-point in-and-out adjustment of panel interior is provided to meet critical depth dimensions on flush installations. This compensates for possible misalignment of box at installation.

Main lugs are mechanical solderless type and approved for copper or aluminum conductors.

Enclosures

Boxes are code-gauge galvanized steel, which include a painted box finished in ANSI-61 light gray to match the trim.

Standard panelboard cabinets are designed for indoor use. Alternate types are available for indoor and special purpose applications.

All enclosures are furnished in accordance with Underwriters Laboratories standards and include wiring gutters with proper wire bending space. Special cabinets can be provided at an additional charge.

The box dimensions shown are inside dimensions. For outside dimensions, add 1/4-inch (6.4 mm).

Standard panelboard boxes are supplied without knockouts (blank endwalls).

Fronts

Fronts (trims) for all panelboards are made of code-gauge steel and have a high durability ANSI-61 light gray finish applied by a baked-on polyester powder coating paint system.

The fronts for lighting and appliance branch circuit panelboards and small power distribution panelboards include a door with rounded corners and concealed hinges. A flush-type latch and lock assembly is included. All locks are keyed alike. These trims are available in both surface- and flush-mounted designs.

EZ Trim Features Standard Door-in-Door with No Exposed Hardware or Sharp Edges (no Tools are Required for Installation)

The Three-Piece Trim for Larger Power Distribution Panelboards Provides for Easy Handling and Installation

Fronts for power distribution panelboards utilize a unique breaker front cover design in which each device has a dedicated bolt-on steel cover. The individual covers form a single deadfront for the panelboard that is used in conjunction with two wiring gutter covers to complete the trim. A door is not finished as part of the standard offering on these panelboards but can be provided, for an additional charge, using a deeper than standard box.

Application Description

Whether providing access for solar systems to inverter inputs or combining outputs from multiple inverters, Eaton's Pow-R-Line C panelboards are available for customization for any application, including backfeed scenarios.

Panelboard Selection Factors

In selecting a panelboard, the following factors must be considered:

- Service (voltage and frequency)
- Interrupting capacity (fully or series rated)
- Ampere rating of main
- Ampere ratings of branches
- Environment

Panelboard Short-Circuit Rating

The short-circuit rating of Eaton's assembled panelboards are test verified by, and listed with, Underwriters Laboratories (UL). Generally, these ratings are that of the lowest interrupting rated device in the panel.

Service Entrance Equipment

The National Electrical Code (NEC) requires that:

- A panel used as service entrance equipment must be located near the point where the supply conductors enter the building
- A panelboard having main lugs only shall have a maximum of six service disconnects to de-energize the entire panelboard from the supply conductors. Where more than six disconnects are required, a main service disconnect must be provided
- A disconnectable electrical bond must be provided between the neutral and ground
- A service entrance type UL label must be factory installed
- Ground fault protection of equipment shall be provided for each service disconnect rated 1000A or more if the electrical service is a solidly grounded wye system of more than 150V to ground, but not exceeding 600V phase-to-phase

Note: Service entrance panels must be identified as such on the order.

Panelboard Standards

In 2008, both the National Electrical Code (Article 408) and UL 67 were updated to remove the mandated 42-circuit limitation. Eaton offers panelboards with more than 42 circuits for those jurisdictions that have adopted the 2008 NEC or later.

For jurisdictions that have not adopted the 2008 or later version of the National Electrical Code, the 42-circuit limitation for Lighting and Appliance Branch Panelboards remains in place. Check with your local code officials to determine specific jurisdiction status.

Panelboard Installation

NEC requires that the operating handle of the topmost mounted device be no more than 6 feet 7 inches (2006.6 mm) above the finished floor and should be installed per NEC and manufacturer's instructions.

Additional boxes and fronts are required when the components required for one panelboard exceed the standard box dimensions.

Multi-Section Panelboards

When two or more separate enclosures are required, separate fronts for each box are standard. A common front can be furnished at additional charge.

Interconnecting Multi-Section Panelboards

When a panelboard, for connection to one feeder, must be furnished in more than one section (Box), each section must be furnished with main bus and terminals of the same rating, unless a main overcurrent device is provided in each section.

Sub-feed or through-feed provisions must also be included (and priced) to provide connection capability to the second section.

Note: Sub-feed or through-feed lugs cannot be used on any panelboard that is not protected by a single main overcurrent device either in the panelboard or immediately upstream, i.e., service entrance panelboards with main lugs only using the six disconnect rule.

Sub-Feed Lugs

Sub-feed lugs (see figure below) are one means of interconnecting multi-section panels. The sub-feed (second set of) lugs are mounted directly beside the main lugs. These are required in each section except the last panel in the lineup. The feeder cables are brought into the wiring gutter of the first section and connected to the main lugs. Another set of the same size cables are connected to the sub-feed lugs (Section 1) and are carried over to the main lugs of the adjacent panel. Cross connection cables are not furnished by Eaton. Sub-feed lugs are only available on main lug only panels.

Note: Sub-feed lugs may not be used on main lug only (six disconnect rule) service entrance panels.

Sub-Feed Lugs

Through-Feed Lugs

Through-feed lugs (see figure below) are another method to interconnect multi-section panelboards. The incoming feeder cables are connected to the main lugs or main breaker at the bottom of panel (Section 1). Another set of lugs (through-feed) are located at the opposite end of the main bus. The interconnecting cables are connected to the through-feed lugs in Section 1 and are carried over to the main lugs in Section 2. The connection arrangement could be reversed, i.e., main lugs at top; through-feed lugs at bottom end of panel. Cross cables are not furnished by Eaton.

Note: Through-feed lugs may not be used on main lug only (six disconnect rule) service entrance panels.

Through-Feed Lugs

Multiple Section Panelboard—Flush Mounted

Shown below is the standard method for flush mounting multiple section lighting and distribution panelboards using standard flush trims.

Multiple Section Panelboard Flush Mounted—Dimensions in Inches (mm)

Overcurrent Protection

The following requirements will be found in the NEC:

Each lighting and appliance branch circuit panelboard shall be individually protected on the supply side by not more than two main circuit breakers or two sets of fuses having a combined rating not greater than that on the panelboard.

Ambient Temperatures

The primary function of an overcurrent device is to protect the conductor and its insulation against overheating. In selecting the size of the devices and conductors, consideration should be given to the ambient temperature surrounding the conductors within and external to the panelboard. Cumulative heating within the panelboard may cause premature operation of the overcurrent protective devices.

Underwriters Laboratories test procedures are based, in part, on 80% loading of panelboard branch circuit devices. The NEC limits the loading of overcurrent devices in panelboards to 80% of rating where in normal operation the load will continue for three hours or more. Further derating may be required, depending on such factors as ambient temperature, duty cycle, frequency or altitude.

Exception: There is one exception to this rule in both UL and NEC. It applies to assemblies and overcurrent devices that have been listed for continuous duty at 100% of its rating.

Special Conditions

Standard panelboards, assembled with standard components, are adequate for most applications. However, special consideration should be given to those required for application under special conditions such as:

- Excessive vibration or shock
- Frequencies above 60 cycles
- Altitudes above 6600 feet (2011.7m)
- Damp environment (possible fungus growth)
- Compliance with federal, state and municipal electrical codes and standards

Seismic Considerations

The Uniform Building Code® and the International Building Code, as well as local and state building codes, place an emphasis on seismic building design requirements. Electrical distribution systems are treated as attachments to the building and therefore, fall into this category.

All Eaton panelboards are seismic qualified at the highest possible level, and have been tested in accordance with ANSI C37.81. This standard quantifies actual earthquake conditions, as well as equipment seismic capability.

Harmonic Currents

Standard panelboard neutrals are rated for 100% of the panelboard current. However, since harmonic currents can cause overheated neutrals, an option is provided for neutrals to be rated at 200% (1200A maximum neutral for 600A main bus) of the panelboard phase current.

Panelboards with the 200% rated neutral are UL listed as suitable for use with non-linear loads.

Prior to specifying the 200% rated neutral, Eaton recommends a harmonic survey be conducted of the distribution system, be it new or existing.

Surge Protective Devices

The quality of power feeding sensitive electronic loads is critical to the reliable operation of any facility. In modern offices, hospitals, and manufacturing facilities, the most frequent causes of microprocessor-based equipment downtime and damage are voltage transients and electrical noise.

Electrical loads and microprocessor-based equipment are highly susceptible to both high and low energy transients. High energy transients include lightning induced surges and power company switching. These high energy transients can destroy components instantly.

More frequently the electrical system experiences low energy transients and high frequency noise.

The effects of continual low energy transients and high frequency noise can cause erratic equipment performance or sudden failure of electronic circuit board components.

Eaton can provide protective and diagnostic systems integral to panelboards. The surge protective device (SPD) is integrated into the panelboards using a “zero lead length” direct busbar connection.

Pow-R-Line 4

The SPD protects sensitive electronic equipment from the damaging effects of high and low energy transients, as well as high frequency noise.

Standards and Certifications

Eaton’s panelboards are designed to meet the following applicable industry standards, except where noted:

- Underwriters Laboratories:
 - Panelboards: UL 67
 - Cabinets and Boxes: UL 50

Note: Only panelboards containing UL listed devices can be UL labeled.

- National Electrical Code
- NEMA Standards: PB 1
- Federal Specification W-P-115c:
 - Circuit Breakers—Type I Class I
 - Fusible Switch—Type II Class I

Terminal Wire Ranges, Pressure-Type Al/Cu Terminals Except as Noted

Note: All terminal sizes are based on wire ampacities corresponding to those shown in NEC Table 310.16 under the 75°C insulation columns (75°C wire). The use of smaller size, (in circular mills), regardless of insulation temperature rating, is not permitted.

Where copper-aluminum terminals are supplied on designated panelboard types, best results are obtained if a suitable joint compound is applied when aluminum conductors are used.

Check Eaton's standard terminal sizes versus customer requirements. In particular, 400 and 800A breakers often require nonstandard lugs.

Optional 750 kcmil mechanical screw-type terminals are available upon request. Panelboard dimensions may be affected, refer to Eaton.

Notes

- ① DC ratings apply to substantially non-inductive circuits.
- ② 15 and 20A single-pole switching duty rated for fluorescent applications.
- ③ Single-, two- and three-pole HACR rated.
- ④ DC rated single-pole, 15–70A only.
- ⑤ Two- and three-pole HACR rated.

Type PRL1a

Product Description

- 240 Vac maximum
- Three-phase four-wire, three-phase three-wire, single-phase three-wire, single-phase two-wire
- 400A maximum mains
- 100A maximum branch breakers
- Bolt-on or plug-on branch breakers
- Each branch connector is capable of up to a total of 140A maximum by breaker ampere rating
- Factory assembled
- Refer to **Page V15-T2-29** for additional information

Application Description

- Lighting branch panelboard
- Fully rated or series rated
- Interrupting ratings up to 200 kA symmetrical
- Suitable for use as Service Entrance Equipment, when specified on the order
- See **Pages V15-T2-29** through **V15-T2-36** for additional information

Standards and Certifications

- UL 67, UL 50
- Federal Specification W-P-115c
- Refer to **Page V15-T2-29** for additional information

Notes

- ① Single-pole breakers are rated 120 Vac maximum.
- ② 50A devices are available as two-pole only.
- ③ GFCI for 5 mA personnel protection.
- ④ GFP for 30 mA equipment protection.
- ⑤ Arc fault circuit breaker.
- ⑥ HID (High Intensity Discharge) rated breaker.
- ⑦ Switching Neutral Breaker. single-pole device requires two-pole space, two-pole device requires three-pole space.
- ⑧ Solenoid operated breaker.

Box Sizing and Selection

Approximate Dimensions in Inches (mm)

Assembled Circuit Breaker Panelboards and Lighting Controls

Box size and box and trim catalog numbers for all standard panelboard types are found on **Page V15-T2-40**.

Instructions

- Using description of the required panelboard, select the rating and type of main required.
- Count the total number of branch circuit poles, including provisions, required in the panelboard. Do not count main breaker poles. Convert two- or three-pole branch breaker to single-poles, i.e., three-pole breaker, count as three poles.
- Determine sub-feed breaker or through-feed lug requirements.
- Select the main ampere rating section from table on **Page V15-T2-40**.
- Select panelboard type from first column, main breaker frame, if applicable, from second column, and sub-feed breaker frame, if applicable, from the third column.
- From Step #2, determine the number of branch circuits in Column 4.
- Read box size, box and trim catalog numbers across columns to the right. Specify surface or flush mounting on the order.

Cabinets

Fronts are code-gauge steel, ANSI-61 light gray painted finish.

Boxes are code-gauge galvanized steel without knockouts. Standard depth is 5-3/4 inches (146.1 mm). Standard width is 20 inches (508.0 mm). An optional 28-inch (711.2 mm) wide box is available.

Top and Bottom Gutters

5-1/2 inches (139.7 mm) minimum.

Type PRL2a

Product Description

- 480Y/277 Vac maximum (125 Vdc)
- Three-phase four-wire, three-phase three-wire, single-phase three-wire, single-phase two-wire
- 400A maximum mains
- 100A maximum branch breakers
- Bolt-on branch breakers
- Each branch connector is capable of up to a total of 140A maximum by breaker ampere rating
- Factory assembled
- Refer to **Page V15-T2-20** for additional information

Application Description

- Lighting branch panelboard
- Fully rated or series rated
- Interrupting ratings up to 200 kA symmetrical
- Suitable for use as Service Entrance Equipment, when specified on the order
- See **Pages V15-T2-20** through **V15-T2-36** for additional information

Standards and Certifications

- UL 67, UL 50
- Federal Specification W-P-115c
- Refer to **Page V15-T2-20** for additional information

Notes

- ① Interrupting ratings in this column are applicable to 120 Vac for single-pole breakers.
- ② Must be used on 480Y/277V grounded wye systems only.
- ③ Remote controllable breaker.
- ④ GFP for 30 mA equipment protection. Requires two-pole spaces. 277 Vac only.
- ⑤ HID (High Intensity Discharge) rated breaker.

Box Sizing and Selection

Approximate Dimensions in Inches (mm)

Assembled Circuit Breaker Panelboards and Lighting Controls

Box size and box and trim catalog numbers for all standard panelboard types are found on **Page V15-T2-44**.

Instructions

- Using description of the required panelboard, select the rating and type of main required.
- Count the total number of branch circuit poles, including provisions, required in the panelboard. Do not count main breaker poles. Convert two- or three-pole branch breaker to single-poles, i.e., three-pole breaker, count as three poles.

Determine sub-feed breaker or through-feed lug requirements.

- Select the main ampere rating section from table on **Page V15-T2-44**.
- Select panelboard type from first column, main breaker frame, if applicable, from second column, and sub-feed breaker frame, if applicable, from the third column.
- From Step #2, determine the number of branch circuits in Column 4.
- Read box size, box and trim catalog numbers across columns to the right. Specify surface or flush mounting on the order.

Cabinets

Fronts are code-gauge steel, ANSI-61 light gray painted finish.

Boxes are code-gauge galvanized steel without knockouts. Standard depth is 5-3/4 inches (146.1 mm). Standard width is 20 inches (508.0 mm). An optional 28-inch (711.2 mm) wide box is available.

Top and Bottom Gutters

5-1/2 inches (139.7 mm) minimum.

Type PRL3a

Product Description

- 600 Vac maximum (250 Vdc)
- Three-phase four-wire, three-phase three-wire, single-phase three-wire, single-phase two-wire
- 800A maximum main lugs
- 600A maximum main breaker
- 225A maximum branch breakers
- Bolt-on branch breakers
- Factory assembled
- Refer to **Page V15-T2-29** for additional information

Application Description

- Lighting panelboard or power distribution panelboard
- Fully rated or series rated
- Interrupting ratings up to 200 kA symmetrical
- Suitable for use as Service Entrance Equipment, when specified on the order
- See **Pages V15-T2-29** through **V15-T2-36** for additional information

Standards and Certifications

- UL 67, UL 50

Notes

- ① 800A MLO requires 28-inch (711.2 mm) wide box.
- ② 100,000 based on NEMA test procedure.
- ③ Top feed only.
- ④ Requires 6.50-inch (165.1 mm) deep box. Not available in Type 3R, 12, 4 and 4X enclosures.
- ⑤ 100% rated circuit breaker. Requires copper bus. Not available in Type 12, 4 and 4X enclosures.

Notes

- ⁽¹⁾ 50A devices are available as two-pole only.
- ⁽²⁾ Single-pole breaker rated 120 Vac.
- ⁽³⁾ Two-pole breaker rated 120/240 Vac.
- ⁽⁴⁾ Arc fault circuit breaker.
- ⁽⁵⁾ HID (High Intensity Discharge) rated breaker.
- ⁽⁶⁾ Switching Neutral Breaker. single-pole device requires two-pole space, two-pole device requires three-pole space.
- ⁽⁷⁾ Solenoid operated breaker.
- ⁽⁸⁾ Single-pole breaker rated 277 Vac.
- ⁽⁹⁾ For use on 480Y/277V systems only.
- ⁽¹⁰⁾ AIC rating for two- and three-pole breakers only.
- ⁽¹¹⁾ Maximum of six breakers per panel, 175–225A.

Box Sizing and Selection

Approximate Dimensions in Inches (mm)

2

Panel Layout Instructions

- Select:
 - Required mains (lugs or breaker).
 - Neutral where required.
 - Branch circuits as required.
- Layout panel as shown below, using appropriate “X” dimensions.
- Using total X units (panel height) find box height in inches (mm) and box catalog number from table below. (When total X units come out to an uneven number, use next highest number; i.e., if total X comes out 25X, use 31X.)

Layout—PRL3a

		Poles								
		6 - 3X	BAB, QBHW, QBCAF,							
		12 - 5X	BABRP, BABRSP, QBHCAF							
		18 - 8X	GHQ, GHB, HGHB

		18X	LGE, LGH, LGC							
		21X	LCL, LA-P ⑥							

Notes

- GHB, HGHB and GHQ breakers cannot be mixed on same connector as BAB, QBHW, BABRP and BABRSP.
- Maximum of six breakers per panel.
- Horizontal mounted 15–150A main breakers EHD, FDB, FD, FDE, HFD, HFDE and FDC, will be furnished as branch breaker construction. Branch breakers single-, two- or three-pole as required, may be located opposite these main breakers.
- If optional terminal kit 3TA225FDK is required, use 10X.
- FB-P and LA-P top mounting only.
- LCL or LA-P main breaker requires 6-1/2-inch (165.1 mm) deep box.

Layout Example

- Description of Panel

Type PRL3a three-phase, four-wire, 120/208 Vac flush mounting. Panel to have short-circuit rating of 22,000 symmetrical amperes. Main breaker 400A, three-pole, bottom mounting. Branch circuits bolt-on as follows:

 - 12–200A single-pole QBHW
 - 1–200A three-pole ED
 - 1–225A three-pole ED
- Layout Information from **Layout—PRL3a** table (left):
 - 400A Neutral. = 8X
 - 12-poles of QBHW = 5X
 - Two three-pole ED breakers . . = 6X
 - Main breaker, 400A, Three-pole DK. = 15X
 - Total Height. = 34X
- From **Box Tabulation—PRL3a** table (below):
 - 34X Height (use 40X box)
 - Box Height 72 inches (1828.8 mm)
 - Box Catalog Number. **YS2072** or **EZB2072R**

Box Tabulation—PRL3a

Cabinets

Fronts are code-gauge steel, ANSI-61 light gray painted finish.

Boxes are code-gauge galvanized steel without knockouts. Standard depth is 5-3/4 inches (146.1 mm).

Standard widths are:
 20-inch (508.0 mm)
 100–600A.
 28-inch (711.2 mm)
 800A.

Standard Depth

5-3/4 inches (146.1 mm).

Top and Bottom Gutters

5-1/2 inches (139.7 mm) minimum.

Side Gutters

4 inches (101.6 mm) minimum.

Type PRL4

Product Description

- 600 Vac maximum (600 Vdc)
- Three-phase, four-wire, three-phase three-wire, single-phase three-wire, single-phase two-wire
- PRL4B circuit breaker panelboard
- PRL4F fusible switch panelboard
- 1200A maximum mains
- 1200A maximum branch devices
- Bolt-on branch devices
- Factory assembled
- Refer to **Page V15-T2-29** for additional information

Application Description

- Power distribution panelboard
- Fully rated or series rated
- Interrupting ratings up to 200 kA symmetrical
- Suitable for use as Service Entrance Equipment, when specified on the order
- See **Pages V15-T2-29** through **V15-T2-36** for additional information

Standards and Certifications

- UL 67, UL 50
- Federal Specification
- W-P-115c
- Refer to **Page V15-T2-29** for additional information

Notes

- ① For ground fault protection on main devices, see **Modification 14** on Page V15-T2-63 or **Modification 15** on Page V15-T2-63
- ② For use on DC systems only.
- ③ 100% rated breaker. Requires copper bus. Not available in Type 12, 4 and 4X enclosures.
- ④ Breaker only available in three-pole frame.
- ⑤ Requires 44-inch (1117.6 mm) wide box.
- ⑥ For ground fault protection on main devices, see **Modification 15** on Page V15-T2-63.
- ⑦ Fuses not included. **Specify required fuse clips on all switches.**
- ⑧ Class J Fuse provisions are applicable only to 600V units. When required, use dimensions of 600V units for all voltages 600 and below.
- ⑨ No DC rating on 600, 800 and 1200A switches

Notes

- ⁽¹⁾ 50A devices are available as two-pole only.
- ⁽²⁾ Single-pole breakers rated 120 Vac.
- ⁽³⁾ Two-pole breakers rated 120/240 Vac.
- ⁽⁴⁾ Arc fault circuit breaker.
- ⁽⁵⁾ Single-pole breakers rated 277 Vac.
- ⁽⁶⁾ For use on DC systems only.
- ⁽⁷⁾ At 480V, must be used on 480Y/277V grounded wye systems only.
- ⁽⁸⁾ AIC rating for two- and three-pole breakers only.
- ⁽⁹⁾ 100% rated breaker. Requires copper bus. Not available in Type 12, 4 and 4X enclosures.
- ⁽¹⁰⁾ Breaker only available in three-pole frame.
- ⁽¹¹⁾ Available in single branch mounting only.

FDPW and FDPB Switch Ratings, 240 or 600 Vac

Ampere Rating	Fuse Class Used	Short-Circuit Ratings (kA Symmetrical)
30–100	R, J ⑥	200
200 Single	R, J ⑥	200
200 Twin	R ⑥, J ⑥, T	200
400, 600 ⑦	R ⑦, J ⑥, T	200
800, 1200 ⑦	L	200

Notes

- ① 100 kAIC based on NEMA test procedure.
- ② Fuses not included. **Specify required fuse clips on all switches. (T fuse clips not available for 200/200 twin switches.)**
- ③ When branches of a twin unit are of different ampere ratings, as a 30–60 twin unit, price and layout as a 60–60 twin unit; when a 60–100 twin unit, price and layout as a 100–100 twin unit.
- ④ No DC rating on 600, 800 and 1200A switches.
- ⑤ Class J fuse provisions are applicable to 600V units. When required, use price and dimensions of 600V units for all voltages 600V and below.
- ⑥ Twin 200A switches are not available with Class R fuse clips at 600V.
- ⑦ When shunt trip is required, 400–600A switches used with Class R fuses are rated 100 kAIC.

Box Sizing and Selection—PRL4B

Approximate Dimensions in Inches (mm)

Main Lug Only (MLO), Main Breaker, Neutral, Through-Feed Lug (TFL) and Sub-Feed Lug (SFL) "X" Space Requirements. (For other configurations not shown, refer to Eaton.)

* = Space available for branch devices. For device sizing, see **Page V15-T2-55**.

● = Blank means no bus under cover, to meet NEC cable bending space.

PRL4B Layout

Standard Main Lug, Through-Feed and Sub-Feed Lugs (500 kcmil Maximum)

Main Breaker with Neutral (when required) (500 kcmil Maximum)

800A Vertically Mtd. MDL Main Breaker only in 24-inch (609.6 mm) wide box. Available with 38X and 50X Panel Height only.

Optional Main Lugs, Through-Feed and Sub-Feed Lugs (750 kcmil Maximum)

Note

① Sub-feed lugs are available 250–600A. For 600A, use 1200A "A" space.

2.5

Panelboards—Solar Applications

Pow-R-Line C Panelboards

Approximate Dimensions in Inches (mm)

2

Panel Layout and Dimensions

To determine the dimensions of a given panelboard enclosure, make a layout sketch by fitting together the main, branch and lug modules according to the appropriate tables in the layout guide. Assign “X” units to each module as shown and obtain a total “X” number.

The height of the enclosure is related to the total “X” units in the layout as shown in table on right. Three standard box heights are available to accommodate any and all layout arrangements. “X” unit totals that do not exactly match those in table on right must be rounded off to the next highest standard (26X, 38X, 50X).

If a calculated “X” total for a panel exceeds 50X, the panel must be split into two or more separate sections with “X” space for through-feed lugs figured in for all but one section. If a neutral is required, a separate neutral bar and appropriate “X” space must be included in each section.

Layout Example

- 1–PRL4B panelboard, 480Y/277 volt, three-phase four-wire 65 kA, 800A, main lug, consisting of:
 - 12–20A/single-pole HFD
 - 2–250A/three-pole HJD
 - 1–400A/three-pole HKD

Reference PRL4B Layout Example

1. From layout guide, total “X” height of panel = 26X, (which is a design standard and no rounding off is necessary).
2. From table on right, enclosure height for 26X panel = 57 inches (1447.8 mm).
3. Width = 24 inches (609.6 mm)—directly from layout guide.
4. Enclosure depth = 11.31 inches (287.0 mm)—standard for all PRL4 panelboards.

PRL4B Layout Example

20A/1P	20A/1P	1X
20A/1P	20A/1P	1X
20A/1P	20A/1P	1X
20A/1P	20A/1P	1X
20A/1P	20A/1P	1X
20A/1P	20A/1P	1X
250A/3P		3X
250A/3P		3X
400A/3P		4X
Main Lugs	800A Neutral	10X

Total = 26X

Box Dimensions—PRL4B

“X” Units	Catalog Number	Height	Width	Depth ①
26X	BX2457	57.00 (1447.8)	24.00 (609.6)	11.31 (287.0)
38X	BX2473	73.50 (1866.9)	24.00 (609.6)	11.31 (287.0)
50X	BX2490	90.00 (2286.0)	24.00 (609.6)	11.31 (287.0)
38X	BX3673	73.50 (1866.9)	36.00 (914.4)	11.31 (287.0)
50X	BX3690	90.00 (2286.0)	36.00 (914.4)	11.31 (287.0)
38X	BX4473	73.50 (1866.9)	44.00 (1117.6)	11.31 (287.0)
50X	BX4490	90.00 (2286.0)	44.00 (1117.6)	11.31 (287.0)

Top and Bottom Gutters

10.63-inch (269.9 mm) minimum.

Side Gutters—Minimum

24.00-inch (609.6 mm) wide box—5.00-inch (127.0 mm).
 36.00-inch (914.4 mm) wide box—6.00-inch (152.4 mm).
 44.00-inch (1117.6 mm) wide box—8.00-inch (203.2 mm).

Notes

- ① Box depth is 10.40 inches (264.2 mm), cover adds 0.90 inches (22.9 mm) to depth.
 800A maximum bus size in 24.00-inch (609.6 mm) wide box. Flush trims not available on PRL4B panels.

Layout for Branch and Horizontally Mounted Main Devices Layout—PRL4B

Notes

- ① BAB and QBHW breakers with shunt trips require one additional pole space, i.e., single-pole is two-pole size, two-pole is three-pole size, and three-pole is four-pole size.
- ② If panel contains only BAB or QBHW branch breakers, use a PRL1a panelboard.
- ③ GHB, HGHB or GHQ breakers cannot be mixed on same subchassis as BAB, QBHW.
- ④ If panel contains only GHB, HGHB or GHQ branch breakers, use a PRL2a panelboard.
- ⑤ When only one single-pole breaker of the group is required on either side of chassis, the single-pole breaker space required changes from 1X to 2X.
- ⑥ Minimum 36-inch (914.4 mm) wide box is required if optional #6–300 kcmil lug is required.
- ⑦ MDL main breaker in 24-inch (609.6 mm) wide box, refer to **Page V15-T2-53**.
- ⑧ Optional 750 kcmil terminal requires 44-inch (1117.6 mm) wide box.
- ⑨ For use on DC systems only.

See **Page V15-T2-53** for MLO or Neutral and Vertically Mounted Mains space requirements.

2

Box Sizing and Selection—PRL4F

Approximate Dimensions in Inches (mm)

Main Lug (MLO), Main Switch, Neutral, Through-Feed (TFL) and Sub-Feed Lug (SFL) “X” Space Requirements. (For other configurations not shown, refer to Eaton.)

* = Space available for branch devices. For device sizing, see **Page V15-T2-58**.

● = Blank means no bus under cover, to meet NEC cable bending space.

PRL4F Layout

Standard Main Lug, Through-Feed and Sub-Feed Lugs ① (500 kcmil Maximum)

Main Switch with Neutral (when required) (500 kcmil Maximum)

400A and 600A Vertically Mounted Main Switch

800A and 1200A Vertically Mounted Main Switch ②
36-inch (914.4 mm) or
44-inch (1117.6 mm)
Wide Box

Optional Main Lugs, Through-Feed and Sub-Feed Lugs ① (750 kcmil Maximum)

Notes

① Sub-feed lugs are available 250–600A. For 600A, use 1200A “A” space.

② 800A and 1200A mains available only in vertical mounting.

Approximate Dimensions in Inches (mm)

Panel Layout and Dimensions

To determine the dimensions of a given panelboard enclosure, make a layout sketch by fitting together the main, branch and lug modules according to the appropriate tables in the layout guide. Assign “X” units to each module as shown and obtain a total “X” number.

The height of the enclosure is related to the total “X” units in the layout as shown in table on right. Three standard box heights are available to accommodate any and all layout arrangements. “X” unit totals that do not exactly match those in table on right must be rounded off to the next higher standard (38X, 50X).

If a calculated “X” total for a panel exceeds 50X, the panel must be split into two or more separate sections with “X” space for through-feed lugs figured in for all but one section. If a neutral is required, a separate neutral bar and appropriate “X” space must be included in each section.

Layout Example

- PRL4F, three-phase four-wire, 208Y/120 volt complete with 400A main switch and the following branches:
 - One 200A/three-pole
 - Two 100A/three-pole
 - Two 30A/three-pole

Panel to have short-circuit rating of 100 kA symmetrical.

Reference PRL4F Layout Example

1. From layout guide, total “X” height of panel = 43X.
2. Rounded off to next higher standard = 50X.
3. From table on right, enclosure height for 50X panel = 90 inches (2286.0 mm).
4. Width = 36 inches (914.4 mm).
5. Enclosure depth is standard for all PRL4 panelboards = 11.31 inches (287.0 mm).

Type PRL4F Layout Example

400A Neutral	7X	
30A/3P	30A/3P	4X
100A/3P	100A/3P	4X
200A/3P	6X	
400A three-pole Main Switch (Vertical Mounted)	22X	

Total = 43X

Box Dimensions—PRL4F

“X” Units	Catalog Number	Height	Width	Depth ①
38X	BX3673	73.50 (1866.9)	36.00 (914.4)	11.31 (287.0)
50X	BX3690	90.00 (2286.0)	36.00 (914.4)	11.31 (287.0)
38X	BX4473	73.50 (1866.9)	44.00 (1117.6)	11.31 (287.0)
50X	BX4490	90.00 (2286.0)	44.00 (1117.6)	11.31 (287.0)

Top and Bottom Gutters

10.63 inches (269.9 mm) minimum.

Side Gutters—Minimum

- 36-inch (914.4 mm) wide box:
 - 8-inch (203.2 mm)—200A maximum
 - 6-inch (152.4 mm)—400–1200A maximum
- 44-inch (1117.6 mm) wide box:
 - 10-inch (254.0 mm)—200A maximum
 - 8-inch (203.2 mm)—400–1200A

Notes

- ① Box depth is 10.40-inch (264.2 mm), cover adds 0.90-inch (22.8 mm) to depth. Flush trims not available on PRL4F panels.

1. Ambient Compensating Breakers

For ambient compensating breakers (where available) in lieu of standard breakers, add 10 percent to panelboard branch breaker and to main breaker list prices, if required. (Not UL listed.)

2. Bus Density

Main bus ampere rating is determined by UL listed temperature test. For 750A per square inch aluminum or 1000A per square inch copper, make price addition as follows:

Modification 2

Panel Type	Maximum Amperes
Aluminum—750A per Square Inch	
PRL1a, 2a	100
	225
	400
PRL3a	250
	400
PRL4	400

800	—	—	(3) 500–750 kcmil
1200	—	—	(4) #2–600 kcmil or (4) 500–750 kcmil

Modification 5—Box Height Additions

Main Amperes	PRL1a, PRL2a	PRL3a without Neutral	PRL3a with Neutral
100	0	0X	0X
225	0	—	—
250	—	2X	5X
400	0	0X	0X
600	—	0X	0X

Maximum size for PRL1a and PRL2a panels:
1–750 kcmil per phase, or 2–500 kcmil per phase.
For PRL4 panels, see layout pages.

6. Concealed Trim Clamps—LT Trim

Modification 6

Description

Add per panel PRL1a, PRL2a, PRL3a

7. Conduit Covers

Fabricated sheet metal to cover open conduits above and/or below standard Type 1 box.

Modification 7

Cover Type

Conduit Enclosing Shield (open back)
PRL1a, PRL2a, PRL3a, PRL4—Refer to Eaton

Conduit Enclosure (solid back)
PRL1a, PRL2a, PRL3a, PRL4—Refer to Eaton

Note

① At 600A, PRL3a requires the addition of density rated copper bus for Type 3R or 12 enclosure.

2.5

Panelboards—Solar Applications

Types PRL1a, 2a, 3a and 4 Modifications

2

8. Copper Lugs

Optional copper mechanical main lugs only. (Includes main incoming neutral lug.)

Modification 8

Main Amperes	Wire Range and Number of Lugs Per Phase
100	(1) #14–1/0

9. Copper Main Bus

Modification 9

Available in PRL1a, PRL2a, PRL3a and PRL4

9a. Silver-Plated Copper Main Bus

Modification 9a

Available in PRL1a, PRL2a, PRL3a and PRL4

9b. Tin-Plated Copper Main Bus (PRL1a, 2a, 3a, Only)

Modification 9b

Panel Type

PRL1a, PRL2a, PRL3a

10. Directory Frame—Metal

Modification 10

Frame Type

Metal frame, plastic cover

11. Trim and Door Modifications—Special Fronts and Doors

Modification 11

Description

Door-in-door, one door over interior and one which exposes gutter. (LT Trim) (PRL1a, PRL2a, PRL3a only)

Common trim for two section panels with boxes bolted together. (LT Trim) (PRL1a, PRL2a, PRL3a only)

Standard flush lock with quarter turn fasteners at top and bottom of trim door (LT Trim) (standard on doors 48-inch (1219.2 mm) high and over). (PRL1a, PRL2a, PRL3a only)

To provide a trim with a lockable door for PRL4 panels (door-in-door is standard with this adder). Includes National lock with standard keying. ^①

Add per panel

12. Fungus Proofing

For fungus proofing external portions of circuit breakers and all non-metallic parts, add 10 percent of total panelboard list price. For fungus proofing fusible switches and all non-metallic parts, add 20 percent of total panelboard list price.

13. Ground Bar

Modification 13

	Description	Bar Type
Panel Type		
PRL1a	Aluminum terminal bar for aluminum or copper cable	Standard, insulated/isolated ^②
PRL2a		
PRL3a	Copper terminal bar for copper cable only	Standard, insulated/isolated ^②
PRL4		
Column Type		
In Pull Box	Aluminum terminal bar for aluminum or copper cable	Standard, insulated/isolated ^②
In Gutter		
	Copper terminal bar for copper cable only	Standard, insulated/isolated ^②

Notes

^① Extra depth box is required. Box will be 12.82-inch (325.6 mm) deep.

^② For PRL1a, 2a, 3a and Column Type panelboards. The insulated/isolated ground bar includes a standard ground bar.

14. Electronic Trip Units

Modification 14—Applies to Digitrip 310 and 310+ Trip Units

Description

K-, L- and M-Frame Circuit Breaker (three-pole only)

Digitrip RMS310 LS

Digitrip RMS310 LSI

Digitrip RMS310 LSG ①

Digitrip RMS310 LSIG ①

N-Frame circuit breaker

Digitrip RMS310 LS

Digitrip RMS310 LSI

Digitrip RMS310 LSG ①

Digitrip RMS310 LSIG ①

Digiview Ammeter for 310+ Trip Unit

15. Zero Sequence Ground Fault Protection

For main devices only (circuit breakers or FDPW switch) in PRL4 assembled panels. Available in 250–1200A panels.

Price includes current monitors, ground bar, static sensor, shunt trip, necessary space, mounting and connecting in panelboards. Price does not include circuit breaker or FDPW switch.

Zero sequence ground fault is available with the following family of main devices:

Modification 15

Main Device

JD, KD, LD, MDL, ND, LCL, LA-P, NB-P
FDPW switches
(400–1200A)

16. Circuit Breaker Handle Lockoff Devices

Modification 16

Breaker Types

Non-Padlockable

BAB, QBHV, GHB, EHD, FDB, FD, ED, EDH, EDC, HQP, QPHW

JD, KD, MDL, ND

Padlockable

EHD, FDB, FD, HFD, FDC, ED, EDH, EDC, GHB, BAB, QBHV, HQP, QPHW, EGB, EGS, EGH

JD, KD, LD, MDL, ND, FDE, HFDE

17. Special Hinges—LT Trim

Piano hinges in lieu of standard hinges.

18. Increased Dimensions (PRL1a, PRL2a and PRL3a Only) Type 1 Enclosure Only

Modification 18

Description

Increased End Gutters

4 inch (101.6 mm) Top or Bottom

7 inch (177.8 mm) Top or Bottom

12 inch (304.8 mm) Top or Bottom

Increased Side Gutters

4 inch (101.6 mm) Left or Right

7 inch (177.8 mm) Left or Right

12 inch (304.8 mm) Left or Right

19. Increased Panel Main Bus Rating (Three-Phase Four-Wire, Single-Phase Three-Wire)

Modification 19

Main Bus Ampere Rating Panel Type

100–225/250 PRL1a, PRL2a, PRL3a

225–400

600 (PRL3a)

250–400 PRL4

400–600

600–800

800–1200

20. Interior and Fronts to Fit Existing Boxes

Refer to Eaton.

21. Special Locks

Modification 21

Description

LT Type Trim

Yale 511S with rosette

Yale 4651S (LL803 Key)

Master keying—above locks or standard lock—per panelboard

Corbin 15767 (Cat. #60 Key)

PRL1a, PRL2a, PRL3a

Tee handle and 3-point catch

PRL1a, PRL2a, PRL3a

COMPX metal lock with standard keying

PRL1a, PRL2a, PRL3a

COMPX metal lock with GE75 keyway

PRL1a, PRL2a, PRL3a, PRL4

EZ Type Trim

Standard Lock, Keyed GE75

Standard Lock, Keyed to Corbin TEU-1

Standard Lock, Keyed to Corbin Cat 60

Standard Lock, Keyed to Corbin WEM1

Notes

① Main breaker only.

PRL4 with door includes National lock with standard keying. See **Modification 11**.

2.5

Panelboards—Solar Applications

Types PRL1a, 2a, 3a and 4 Modifications

2

22. Molded Case Switches (Three-Pole, Two-Pole)

Modification 22

Not UL Listed

Breaker Frame	Maximum Volts	Maximum Amperes
EHD	480	100
FD	600	225
JD	600	250
DK	240	400
KD	600	400
LD	600	600
MDL	600	800
ND	600	1200

23. Nameplates, Engraved

Modification 23

Type

Mastic back and installed by purchaser, per nameplate

Fixed to panel trim with two screws or rivets, per nameplate
PRL1a, PRL2a, PRL3a only

24. Neutral Rated 200%

Modification 24

Main Bus Rating	Neutral Rating
100	225
225	450
250	500
400	800
600	1200

Modification 24—Box Height Additions

Main Bus Rating	Neutral Rating	PRL1a, PRL2a	PRL3a	PRL4
100	225	0	0X	—
225	450	0	—	—
250	500	—	3X	0X
400	800	0	3X	0X
600	1200	—	3X	0X

Note: Dimensions based on mechanical lugs. For compression or copper lugs, refer to Eaton.

For 800 and 1200A PRL4 with 200% neutral, refer to Eaton.

25. Painting and Special Coatings

Standard boxes are code-gauge galvanized sheet steel. Standard trims are code-gauge sheet steel with a rust inhibiting phosphatized coating and finished with ANSI-61.

Modification 25

Description

Painted boxes (ANSI-61)

Painted trims or boxes (other than ANSI-61)

26. Permanent Circuit Numbers

Modification 26

Description

To provide permanently attached Micarta Xcircuit numbers.

27. Remote Control Switches—ASCO 920 (Three-Pole, Two-Pole)

Electrically operated, mechanically held remote control switch directly mounted to panelboard bus for total or split bus switching applications.

(For split bus applications, make price addition from **Modification 30**.)

480 Vac maximum short-circuit rating of panelboard is 22 kAIC maximum.

Includes complete installation in the panelboard with a screw cover over the switch compartment.

Pushbuttons or other control devices are not included. For control circuit modifications, refer to Eaton.

Modification 27—Remote Control Switches (PRL3a Only)

Switch Rating Amperes

30, 60, 75, 100, 150, 200, 225

Modification 27—Remote Control Switch Modifications

Description

Two-wire control relay

Three-wire control relay

Control power transformer

To provide hinged cover in place of standard screw cover

28. Service Entrance

To provide a Service Entrance Label as detailed under the “Service Entrance Equipment” in application considerations. Only panelboards meeting these requirements can be labeled as such. The requirement for a Service Entrance Label must be noted on order entry. Includes neutral disconnect link and Service Entrance Equipment Label. (Ground bar not included—see **Modification 13**.)

Modification 28

Panel Type

PRL1a, PRL2a, PRL3a, PRL4

29. Shunt Trip for Main or Branch Circuit Breaker and FDPW Switches

For tripping device from a remote point. Voltage and frequency must be specified. Wiring to terminal blocks is not included. Standard leads extend 18-inches (457.2 mm) out of device.

Factory-installed 120, 240 or 480 Vac shunt trips are available with UL listing as shown in table below. Underwriters Laboratories listing is not available for shunt trip mounted on molded case switches.

Modification 29

Device

BAB, QBHW

Requires one additional pole space, i.e., single-pole is two-pole size, two-pole is three-pole size and three-pole is four-pole size.

GHB (three-pole only)

All other circuit breakers

FDPW switch (400–1200A)

30. Split Bus or Meter Loop (250A Max., 3Ph 4W, 3Ph 3W, 1Ph 3W, 1Ph 2W)

Panel type PRL3a only. For enclosure size, refer to Eaton.

Modification 30

Main Bus Amperes

100–250

31. Metering Devices (PRL4 Only)

IQ digital metering for incoming service. Devices are installed in chassis mounted compartment with hinged door. Standard CTs (1200A maximum) are included with devices. Requires copper bus at 1200A.

Modification 31

Device	Box Height Addition
IQ 130 with CTs and display	13X
IQ 130 with CTs, no display	13X
IQ 140 with CTs and display	13X
IQ 140 with CTs, no display	13X
IQ 150 with CTs and display	13X
IQ 150 with CTs, no display	13X
IQ 210 with CTs	13X
IQ 220 with CTs	13X
IQ 230 with CTs	13X
IQ 230M with CTs	13X
IQ 250 with CTs and display	13X
IQ 250 with CTs, no display	13X
IQ 260 with CTs and display	13X
IQ 260 with CTs, no display	13X
PXM 2250 with CTs and display	13X
PXM 2250 with CTs, no display	13X
PXM 2260 with CTs and display	13X
PXM 2260 with CTs, no display	13X
PXM 2270 with CTs and display	13X
PXM 2270 with CTs, no display	13X

32. Sub-Metering IQ Multi-Point Submeter II (PRL4 Only)

Microprocessor-based breaker-mounted device to monitor power and energy (kW, kWh, kW demand). Device mounts on the load side of three-pole F-, J- and K-Frame feeder breakers. Units are shipped with the interior for field installation. Minimum box width of 36 inches (914.4 mm) is required.

Modification 32

IQ Energy Sentinel

F-Frame three-pole (150A maximum)

J-Frame three-pole

K-Frame three-pole

33. Sub-Feed Breakers

Modification 33—Panel Types PRL1a, PRL2a, PRL3a One Breaker Per Panel

34. Sub-Feed Lugs (3Ph 4W, 3Ph 3W, 1Ph 3W, 1Ph 2W)

Note: Not available on service entrance panels with main lugs only (six disconnect rule).

Mechanical Al/Cu lugs. Compression or copper lugs requires additional price adder from **Modification 5—Compression Lug Data** or **Modification 8** as appropriate.

Available on main lug panels only.

Modification 34

Main Amperes	Box Height Addition
Panel Types PRL1a, PRL2a

37. Time Clock Space Only

Includes box, trim, door and mounting pan.

Modification 37

Enclosure Type

Type 1

PRL1a, PRL2a, PRL3a (24-inch (609.6 mm) space)

PRL1a, PRL2a, PRL3a (36-inch (914.4mm) space)

Type 3R

PRL1a, PRL2a, PRL3a (24-inch (609.6 mm) space)

38. Touchup Paint

Modification 38

Description

12 oz. spray can. ANSI-61 light gray indoor

Case Lot of 12—12 oz. spray cans. ANSI-61 light gray indoor single style

Notes

① Refer to PRL4 layout.

② Refer to panelboard sizing charts.

39. Surge Protective Device (SPD)

Type PRL1a, PRL2a and PRL 3a and Panelboards

Package includes SPD unit connected to the panelboard bus.

Available for all enclosure types.

Sizing:

PRL1a, PRL2a: Add 7 inches (177.8 mm) to the standard box height.

PRL3a: Add 4X for 100–200 kA SPD units.

Type PRL4 and Elevator Control Panelboards

Package includes SPD unit and integral circuit breaker disconnect (30A) connected to the panel bus.

Available for all enclosure types.

The SPD unit and integral circuit breaker disconnect will require 7X of chassis space. (Only available in 36-inches (914.4 mm) or 44-inches (1117.6 mm) wide enclosure.)

Modification 39

Description	kA/Phase

Satellites

A unique concept of facilities close to customer locations, assuring fast delivery of standard- and custom-assembled equipment *when it's needed.*

Located at strategic locations throughout the United States, these facilities manufacture and deliver standard or custom-assembled panelboards, switchboards and enclosed circuit breakers...when and where you need them. And, when you have an emergency, they can have your equipment ready in hours.

Highly trained and experienced personnel will manage your order and ensure that you receive on-time delivery of high quality equipment that meets your specifications.

Special Configurations

The unique capabilities of these plants and people can provide solutions for special products to meet special needs.

Typical examples include special dimensions, retrofit equipment and panelboard interiors to fit existing boxes.

Speedy Delivery

- Panelboards: from one to five days.
- Switchboards: between five and 10 days.
- Assembled Enclosed Circuit Breakers: from one to 10 days.

Save Time and Money

No matter your location, you will save time and money when ordering from a satellite. For more information, contact your Eaton representative or authorized distributor.

Additional Information

For information on reverse feed breaker applications, please see **Consulting Application Guide—Molded-Case Circuit Breakers & Enclosures**, CA08104001E, Tab 27.

Product Group Overview

Eaton has created several key support groups, for the direct purpose of providing the highest quality service available today in the renewable energy market segment. These valued-added support capabilities allow us to provide a level of service above all other manufacturers and regional independent organizations. Below is a description of the groups involved in completing any successful solar photovoltaic turnkey project from design through construction. Equipment startup and system commissioning and even long-term maintenance requirements are part of Eaton’s strengths.

Features

- Feasibility studies
- AC interconnection analysis
- DC and photovoltaic system engineering
- Turnkey construction
- Utility interconnection substations
- Equipment manufacturer
- Equipment and system commissioning
- Monitoring services
- Long term maintenance

Solar Renewable Analysis and Consultation

Product Overview

Eaton’s team can provide a cost-effective review with recommendations that maximizes solar renewable energy production. Eaton’s approach investigates all or some of the following:

- Analysis of solar production potential by applying various methods of fixed, tilt and tracking systems
- Analysis of electrical interconnect feasibility and power usage
- Analysis of term-term maintenance and monitoring options and associated costs
- Development of Life-Cycle-Cost-Analysis (LCCA) for potential solar sites
- Initial analysis via use of Google-Earth photographs if feasible
- If required, specific site visits to further investigate the above
- If required, site visual audit of electrical equipment operating conditions
- Establishing a “Solar Production Index” when evaluating multiple sites
- Identify any potential issues with equipment life expectancy and warranty fulfillment obligations

Our analysis starts with the following premises that have been communicated to us by developers:

- Need to maximize solar energy production with expected 20-year solar variations
- Estimated construction costs identified and technical opinion of project completion from a technical and construction standpoint
- Preliminary review of any potential civil or structural issues involving potential solar sites
- Best practice recommendations for long-term monitoring to ensure maximum uptime and energy production to match the financial model
- Need for experienced analysis of hardware supplied, life expectancy and potential issues with warranty fulfillment obligations
- Recommendations for ongoing maintenance, operations and failure response

Product Description

Eaton’s Electrical Services & Systems Group has extensive experience in electrical power distribution systems design, installation, start-up, commissioning, maintenance, trouble-shooting, life-extension and ongoing monitoring of operating parameters as well as failure indicators. We have added expertise and direct experience in the area of solar renewable energy projects, therefore providing developers and investors a non-biased technical review of potential solar sites.

Terms and Conditions

Eaton can provide the above services in accordance with Eaton Standard Terms and Conditions or other mutually acceptable terms at either a fixed price or a time-and-material basis. If you have any questions or requests, please contact your local Eaton Engineering Services & Systems office today.

Solar Design

Product Overview

Interconnection Analysis Services

Power system analysis services offer a focused and systematic approach to enhance performance and design, validate equipment selection, and simulate response to abnormal conditions. Typical analysis services performed during design of new renewable generation sites include:

- Short-Circuit Analysis— Calculation of the available short-circuit currents at equipment locations throughout the power system. Evaluation of equipment ratings ensures equipment can withstand, and, where applicable, interrupt an electrical fault. Results are critical for proper system design, including specification and selection of equipment
- Protective Device Coordination— Determination of necessary characteristics, ratings, and settings for electrical protective devices
- Arc Flash Analysis— Calculation of arc flash hazards associated with energized work at locations throughout the power system in accordance with NFPA 70E, IEEE1584, National Electric Safety Code, and Z462 requirements
- Load Flow Analysis— Analysis of the system’s capacity to supply electrical energy from the renewable energy source to the utility or customer under steady-state conditions, determination of appropriate continuous ratings for electrical equipment, and optimal placement and characteristics of reactive power compensation equipment
- Harmonic Analysis— Evaluation of harmonic currents on the electrical system introduced by the renewable energy source and application of harmonic mitigation equipment and design techniques

Contents

<i>Description</i>	<i>Page</i>
Product Group Overview	V15-T2-70
Solar Renewable Analysis and Consultation	V15-T2-71
Solar Design	
Product Description	V15-T2-74
Turnkey Services	V15-T2-75
Solar Monitoring	V15-T2-77

- Transient Stability Analysis—Evaluation of dynamic behavior of the renewable source and system voltages during transient conditions such as system faults or start-up
- Switching Transient Analysis—Analysis of system behavior during switching conditions to identify possible damaging voltage transients. Results are used to design and specify mitigation equipment such as snubbers

Electrical Design Services

Eaton’s electrical design services can extend from the point of utility connect to the equipment. Design services are integrated with analysis services, resulting in a complete engineered solution. The level of design detail can be customized from minimal design consultation and advice to a complete design package with specifications and drawings.

Typical design services include:

- Distribution System Design—Design and specification of the electrical distribution system from the point of interconnection to generation equipment
- Substation Design— Complete substation design service is available, including ground grid analysis and design, substation layout, equipment specification, protection, and control
- Protection and Control— Design of advanced electrical protection and control including transmission line protection, system automation, advanced metering and smart grid capabilities

DC Engineering Services

One-line diagram of the power system is critical to support the system evaluation and analysis. The one-line diagram shows the identification and ratings of electrical equipment such as: transformers, cables, circuit breakers, protective relays, fuses, switches, current transformers, potential transformers, surge arresters, and so on. ANSI device numbers identify protective relay types. The one-line diagram is typically provided with each type of power system study. Electrical one-line diagram, showing DC and AC portions of the system, to include the following:

- Solar module manufacturer, type and catalog number; number of module strings, number of modules per string (DC)
- Make, model, DC kW rating of solar panels
- Make, model, AC kW rating of inverter(s)
- Make, model, voltage, and current interrupt rating of all AC and DC disconnect switches
- Make and model of all lightning arrestors and surge suppression equipment
- Make and model of combiner boxes and fuses
- Make, model and rating of all circuit breakers and electrical panels
- Make and model of the utility meter
- Size, insulation rating, and temperature rating of system wiring and nominal voltage present on each line

- Complete electrical circuit back to customer's utility connection. All customer electrical panels related to the PV system shall be shown. Such panels shall be labeled with the make, model, bus rating and customer designation. The main circuit breaker shall also be labeled with the make and rating (if applicable)
- Proper compliance with all authorities having jurisdiction
- Step up transformer, MV switchgear, and point of utility connection

Typical DC connection drawing, showing the following:

- Typical termination for a solar module string
- Typical panel to panel termination
- Typical combiner box termination
- Develop cable routing and interconnection details
- Step up transformer, MV switchgear, point of utility connection equipment
- Grounding plan

Equipment layout drawing(s), showing locations for the following:

- Solar modules
- Combiner boxes
- Disconnect switches
- Inverters
- Conduit routing
- Existing panel, switchboard, or switchgear connection
- Step up transformer, MV switchgear, point of utility connection arrangement

Cable and conduit schedule, to show:

- Cable/conduit ID
- From/To destinations
- Voltages, AC or DC
- Cable and conduit sizing
- Number of conductors/sets per phase
- Insulation type

Power Systems Engineering is an integral part of Eaton's electrical service capabilities. The combined Eaton Electrical Services & Systems team can provide a full scope of design and construction management services to support your project needs:

- Engineering and design
- Multi-vendor equipment supply
- Turnkey projects and construction management
- Installation services
- Power quality and load measurements
- Power quality investigation
- Energy management studies
- Renewable energy applications

Electrical Design Submittals

Eaton can prepare an equipment specification by using an approved single line diagram(s); knowledge of physical environment restrictions; the application of the electrical equipment; the equipment manufacturer's standards and options; the latest manufacturing industry standards; and a thorough knowledge of the latest local and national codes and regulations for installation of the equipment.

Eaton can develop equipment layout or arrangement plans that will identify the location of the equipment based upon the customer's physical restrictions. Once the equipment location has been determined, foundation designs, equipment grounding, and raceway routing designs will be developed and issued for approval.

Eaton can provide the following minimum design elements for the design deliverables:

- Title sheet
- Existing site plan
- PV array layout
- Electrical one-line diagram sheet
- Equipment location plan
- Equipment specifications
- 100% design drawings and other information as needed to enable accurate procurement and installation required to construct the project

Product Description

Eaton's Power System Engineering team is your ally to provide analysis and design for connecting renewable and alternative energy generation to the utility grid. Our experience and North American coverage make Eaton the choice to analyze and design the electrical distribution system and substation for wind and solar farm projects.

Our power system engineers bring extensive skills and expertise to power system analysis and design. Active participation in technical societies such as IEEE and collaboration with a variety of utilities and industries ensures that our engineers are knowledgeable about today's cutting edge engineering techniques.

Turnkey Services

Product Overview

Services for Solar Photovoltaic Power

Pre-installation services

- Solar site assessments including technical and financial analysis
- Solar system design including shading and annual kWh output analysis
- Photovoltaic panel selection
- Electrical balance of system design
- Monitoring system design (meters and software)
- Building connection and substation design

Installation services

- Solar photovoltaic panel installation
- Electrical balance of system installation
- Building infrastructure connection
- Utility grid interconnection up to 345 kV substations, synchronizing and controls
- Solar system commissioning and performance verification

PV System Commissioning

- Eaton can provide start up and commissioning services for the solar array, DC equipment, inverters and all AC equipment up to the point of connection
- Eaton can supply all test equipment and labor to properly test the PV system
- Eaton can complete the required field verification of the solar system components from the PV panels to the electrical AC grid connection. Acceptance will involve several steps starting at factory testing through final site system performance evaluations, with ongoing reporting and evaluation
- Eaton can supply complete close out documentation including final test reports, O&M manuals, training and as built drawings

Post-installation services

- Remote performance monitoring (metering and data collection)
- Ongoing energy production monitoring and rebate certifications

Product Description	V15-T2-76
Solar Monitoring	V15-T2-77

- Site power quality, load shedding and future expansion analysis
- Maintenance
- Operations training for site personnel
- Safety training
- Access to around-the-clock customer support

Other services

- Arc flash hazard analysis and solutions
- Power reliability studies
- LEED certification audits
- Building energy audits

Equipment Solutions for Solar Photovoltaic Power

DC switching and protection

- DC solar disconnect switches
- DC solar integrated disconnect combiner switch
- DC string level and array level monitoring

Inverters

- Solar inverters
- String Inverters, commercial inverters, utility class inverters

AC switching and protection

- AC solar switchboards and panelboards
- AC solar load centers
- AC disconnect switches
- AC circuit breakers
- Low voltage and medium voltage AC switchgear
- Low voltage and medium voltage transformers

Packaging

- Integrated Solar System (ISS)
- Integrated Power Assembly (IPA)

Monitoring and metering

- Metering solutions compatible with Eaton and other manufacturers' equipment
- Customized metering solutions
- Web-enabled data collection and monitoring
- Cellular and satellite communications

Solar Monitoring

Product Overview

PVGard® is a web-based solar monitoring system that can transmit via hard wire land lines or wireless communications from field acquired measurement parameters. Data parameters monitored and displayed can include but not be limited to the following measurements and displays:

Photovoltaic power output performance measurement transducers

- AC current and voltage
- DC current and voltage
- Kilowatt-hour meter

Meteorological data measurements

- Ambient air temperature
- Relative humidity
- Barometric pressure
- Wind speed
- Wind direction
- Rainfall
- Global horizontal irradiance
- Solar cell temperature

Real time data at minimal of 15 minute intervals

- AC current, voltage and kilowatt hours
- Solar plane of array irradiance
- Ambient temperature and wind speed

Calculated parameters

- AC power output
- Sunlight conversion efficiency to AC and DC power
- Inverter DC to AC power conversion efficiency
- Avoided pollutant emissions of CO₂, SO_x, and NO_x gases

Inverter monitored data

- Watt-hour
- AC and DC voltage and current
- AC frequency
- Cumulated watt-hours
- Inverter error codes
- Inverter conversion efficiency
- DC string level and re-combiner current monitoring

Inverter System Sensors—(Enhanced monitoring parameters)

- Internal equipment enclosure temperatures and humidity
- Internal dust/smoke alarm levels within enclosures
- Water intrusion detector (floor water)
- Breaker trip or operation
- Fan and heater circuit operation
- Load current of main circuit breakers
- Transformer monitoring and alarms
- Relay status/health and Inverter error codes alarming
- Safe-solar detection and protection
- Quarterly performance reports to be e-mailed to site personnel
- Alarm conditions will be e-mailed and text-message to site personnel/Eaton
- Alarm and operating conditions will be summarized in quarterly report
- Inverter health index

The monitoring and display software permits customization to incorporate descriptive text, schematic diagrams, and user-specific data.

PVGard also provides the capability to generate the following type of graphs:

- Average plots of irradiance
- Average plots of ambient temperature and module temperature
- Daily value or totals of energy production
- Peak daily power
- Peak daily module temperature
- Peak daily irradiance plot over a specific month
- Monthly values of energy production
- Incident solar irradiance
- Cumulated yearly voided emissions of CO₂, SO_x, and NO_x gases

The displayed data can also incorporate a looping background of pictures from the site, graphic overlays of the solar power generation in watts and watt-hours for each inverter. Other display capabilities:

- Project location on globe coordinates with zoom-in and out capability
- Current weather conditions
- Power generation from the total system and/or the individual solar power arrays
- Historic power generation
- Solar power system environmental impact
- Educational power point presentation (optional)
- Installed solar power electrical system overview and single line diagram

The display system can be capable of being programmed periodically to show additional information related to scheduled maintenance.

Product Description

Eaton's PVGuard Engineered Monitoring system is a web-based system that monitors and proactively manages PV array equipment, inverters, AC equipment and weather parameters. Eaton builds in custom algorithms to track multiple inputs in order to improve and maintain system performance. For example PVGuard alerts users to underperforming panels and can schedule maintenance on inverters when expected production values are shown to be lower than optimal performance.

Direct Current Circuit Breakers

Product Description

DC (direct current) systems and applications are becoming commonplace as alternative energy sources have expanded and the number of DC devices and data centers using DC power has swelled.

Eaton offers molded case circuit breakers and switches to meet circuit protection and switching requirements for a host of different DC end use requirements. Applications include UPS battery supply circuits, solar systems and electric vehicle charging, as well as commercial and industrial distribution.

Current ratings are available from 15 to 2500A, with a full scale of voltage and interrupting ratings to address needs ranging from standard to the highest performance. Optional internal accessories provide remote tripping and indication of breaker status.

The DC breaker family is UL® 489 listed and exceeds the requirements in UL 489 Supplement SC for UPS applications. Eaton breakers may be applied in both ungrounded and select grounded applications, with poles connected in series to operate at the maximum voltages shown on **Page V15-T3-3**. To use DC circuit breakers on 600V grounded systems, three poles in series must be connected on the ungrounded leg.

The HFDDC through HMDLDC DC breakers use the same internal and external accessories as their Series C or Series G AC frame equivalents. NBDC and PBDC use the same internal and external accessories as standard NB and PB breakers.

Many of the Eaton AC molded case circuit breakers carry 250 Vdc ratings for ungrounded systems. Refer to **Volume 4—Circuit Protection**, CA08100005E, Tab 2 for these interrupting tables.

Notes

^① DC ratings apply to substantially non-inductive circuits. Time constants per UL 489.

^② EGEDC through HMDLDC have been tested up to 300 Vdc to allow for battery charging voltages. 750 Vdc is common in transportation applications. HFDDC, four-pole 750 Vdc is available up to 150A maximum. 300 Vdc and 750 Vdc are not UL 489 listed voltage ratings.

^③ Four-pole frame with two-poles connected in parallel.

See **Page V15-T3-14** for series connection diagrams. Use NEC[®] rated cable to connect/short poles in series as shown.

Note

① F-Frame circuit breakers are factory sealed. Underwriters Laboratories requires that internal accessories be installed at the factory. Internal accessories are UL listed for factory installation under E7819. Where local codes and standards permit and UL listing is not required, internal accessories can be field installed. Accessory installation should be done before the circuit breaker is mounted and connected.

One accessory can be mounted per pole, per breaker. Factory installation of accessories is available. Contact Eaton for assistance with part number configuration.

Jumpers

Jumpers must be ordered separately. Priced individually.

Wiring Diagrams

Series Connection Diagrams for DC Application ①②

3

250 Vdc Maximum—Two Poles in Series

Suitable for use on ungrounded systems, or grounded systems that have one end of load (A) connected to grounded terminal, opposite poles in series connection.

Suitable for use on ungrounded systems only.

500 Vdc or 600 Vdc Maximum—Three Poles in Series

Suitable for use on ungrounded systems, or grounded systems that have one end of load (A) connected to grounded terminal, opposite poles in series connection.

Suitable for use on ungrounded systems only.

750 Vdc Maximum—Four Poles in Series

Suitable for use on ungrounded systems, or grounded systems that have one end of load (A) connected to grounded terminal, opposite poles in series connection.

Suitable for use on ungrounded systems only.

Notes

- ① Poles in series connection is customer supplied. Use rated cable per NEC.
- ② For grounded systems, all poles in series must be connected on non-grounded terminal, with load connected to grounded terminal.

PVGard Solar Circuit Breakers—600 Vdc Per-Pole and 1000 Vdc Poles-in-Series

Product Overview

- Two PVGard lineups
 - 600 Vdc per-pole breaker and switch. Each pole rated 600 Vdc
 - 1000 Vdc poles-in-series breaker and switch. Requires poles in series connection
- Both options UL 489B listed for solar photovoltaic circuit protection
- 50°C calibration
- Offers both 100% and 80% rated breakers
- Handle bi-directional current flow

Product Description

Photovoltaic (PV) systems convert the energy of the sun into electrical power that is fed directly into the electric grid. Within the balance of system (BOS), direct current (DC) circuit breakers protect the wiring connected from the PV modules to the combiner or the inverter, while also behaving as a disconnect.

Eaton is a global leader in circuit protection and brings this expertise to bear in the photovoltaic market. PVGard solar circuit breakers are part of a product family that combines a disconnect with circuit protection in a single, compact, resettable device to protect and isolate DC circuits as needed in photovoltaic systems. PVGard breakers can replace fuses, fuse holders and disconnects in combiner box and inverter applications—saving space, streamlining design, purchasing and receiving, and reducing spare parts requirements.

There are two PVGard lineups to choose from: the industry-exclusive, 600 Vdc per-pole breakers and switches designed for residential and light commercial applications and 1000 Vdc poles-in-series breakers and switches for commercial and utility scale applications.

PVGard 600 Vdc Per-Pole Lineup

Only Eaton can offer this breakthrough breaker that will save significant space, time and cost. As a single-circuit-per-pole device, it allows space savings of up to 66% when compared to traditional poles-in-series disconnects, switches and breakers. In addition, it eliminates the need for jumpers for poles-in-series connection—saving on installation time, labor and even inventory.

PVGard 1000 Vdc Poles-in-Series Lineup

This 1000 Vdc poles-in-series lineup provides reliable and safe disconnect means and overcurrent protection in a single, compact device for commercial and utility scale PV systems. This solution does not require jumpers with the breaker/switch to be a UL 489B listed device, providing reliability and flexibility in design without limitation on implementation of the breaker/switch. If needed, cost-effective Eaton jumpers can be included.

Application Description

Photovoltaic (PV) systems convert the energy of the sun into electrical power that is fed directly into the electric grid. PVGard circuit breakers are used to protect the wiring from the modules to the combiner box or inverter from overcurrents, and to provide an isolation mechanism.

Eaton offers a complete line of UL 489 Listed multi-purpose 600 Vdc poles-in-series breakers and switches, as well as protection for the AC side of the inverter.

Features

PVGard breakers are uniquely designed with these features:

- Meets the higher voltage and lower fault current levels of solar systems
- Tested to extreme ambient conditions from -40°C to $+90^{\circ}\text{C}$
- Full complement of accessories for status, signalling, and on/off operation remotely
- Can handle bi-directional flow of current
- Can be applied in grounded, ungrounded or bi-polar systems
- Meets and exceeds the standards of UL 489B for photovoltaic molded case circuit breakers and molded case switches
- Available both standard (80%-rated) and 100%-rated breakers
- 50°C calibration
- Ability to open on signal from DC arc or ground fault detector
- Wide range of current ratings increases options for matching incoming strings
- Eliminates fuse stocking costs and matching issues

Designed specifically for high- and low-temperature demands of PV installations, PVGard circuit breakers undergo extreme ambient cycling tests, and carry a robust operating temperature range. Trip units calibrate at 100% and 80% of nameplate current in a 50°C ambient, ensuring continuous operation in higher temperature environments typical to solar.

Rigorous third-party testing includes limited and standard fault current tests, electrical and mechanical endurance, di-electric voltage withstand and temperature tests. Eaton's PVGard products are stand-alone devices without requiring jumpers to be UL 489B listed devices.

PVGard breakers are available with a full complement of accessories to provide string status, enable remote trip, on/off operation, and can be customized to site requirements.

Standards and Certifications

- Designed to meet UL 489B for solar photovoltaic circuit protection
- UL File E350638, Category Control Number DIUR

Molded Case Switches

Eaton's DC molded case switches (MCS) are used in applications requiring a compact, high capacity disconnect. PVGard 1000 Vdc

MCS are UL 489B listed and have automatic instantaneous current protection. These devices do not provide overload protection.

Molded Case Switches

Notes

① Underwriters Laboratories requires that internal accessories for the FD PV be installed at the factory. Internal accessories are UL listed for factory installation under E7819. Where local codes and standards permit and UL listing is not required, internal accessories can be field installed. Accessory installation should be done before the circuit breaker is mounted and connected.

One accessory can be mounted per pole, per breaker.

Technical Data and Specifications

- Thermal-magnetic circuit breakers
- Designed to meet UL 489B for solar photovoltaic circuit protection
- 100% rated of the continuous current rating
- 50°C calibrated
- Can be applied in grounded, ungrounded or bi-polar systems
- Ability to open on signal from DC arc or ground fault detector
- Two PVGard lineups
 - UL File EE350638, Category Control Number DIUR
 - 600 Vdc per-pole breaker and switch
 - Each pole rated 600 Vdc
 - 1000 Vdc poles-in-series breaker and switch
 - Requires poles in series connection

3

JF PVS, KD PVS—600 Vdc Per-Pole

Suitable for grounded or ungrounded systems.
Suitable for quantity (3) 600 Vdc circuits.

FD PV, KD PV, LG PV—1000 Vdc Maximum—Four Poles-in-Series

Suitable for use on ungrounded systems, or grounded systems that have one end of load (A) connected to grounded terminal, opposite poles in series connection.

Suitable for use on ungrounded systems only.

MDL PV—1000 Vdc Maximum—Three Poles in Series

Suitable for use on ungrounded systems, or grounded systems that have one end of load (A) connected to grounded terminal, opposite poles in series connection.

Suitable for use on ungrounded systems only.

Notes

- ① Poles in series connection is customer supplied. Use rated cable per NEC.
- ② For grounded systems, all poles in series must be connected on non-grounded terminal, with load connected to grounded terminal.

Description

DC Switch Disconnectors	
Product Selection	V15-T3-30
Technical Data and Specifications	V15-T3-34
Dimensions	V15-T3-37

DC Switch Disconnectors

Product Description

Switch disconnectors N...DC in the special version for up to 1500 Vdc can be used on single- or two-poles. They comply with the isolation properties for earthed IT networks. Accessories, such as bridge kits, connection terminals and door coupling rotary handles, enable individual installation in the most varied types of distribution systems. Auxiliary switches, voltage releases and remote operators facilitate signalling and automation.

Application Description

- Switch disconnectors for nominal system voltage up to 1500 Vdc
- Suitable for cabinets with ambient temperatures up to 70°C
- Main switch before DC/AC converter fulfills NEC requirements
- Safely switching in combiner boxes enables effective operation in case of maintenance with breaking capacity under load up to 4x nominal current
- Bi-directional functionality of switch contacts for array protection suitable for grounded or ungrounded systems

Features

- Switch disconnectors N can be combined with voltage releases NZM...-XU, NZM...-XA and auxiliary contacts, as well as with remote operator NZM...-XR
- For DC switching, series connection of all four current paths is needed
- Standard equipment: screw-type connection, frame terminal available as an option
- For non-earthed networks (e.g., IT), the installation must be configured such that the likelihood of a double earth fault is negligibly small
- Switches can not be combined with withdrawable units and/or connection on rear
- N4-4...S15-DC supply from the bottom only

Standards and Certifications

- IEC/EN 60947-3
- Main switch characteristics including positive drive to IEC/EN 60204 and VDE 0113
- Isolating characteristics to IEC/EN 60947 and VDE 0660
- Busbar tag shroud to VDE 0160 Part 100

Bridge Kits

Two-Pole (+ and -) on One Side

- Model contains parts for upper or lower row of switchgear side for four-pole switches N...-S1(S15)-DC that are used as two-pole switches for DC

- Each link connects two contacts in series
- Incoming unit and outgoing at bottom according to the switching diagrams
- N4-4-... ≥1250A at 65°C alternate connection at bottom through module plates NZM4-4-XKM2S-1600
- N4-4-...S15-DC supply from the bottom only

Note: N...S1-DC and N...S15-DC cannot be combined with plug-in or withdrawable units and/or in case of rear connection.

Central Fitting Position

IT Network Including the Possibility of a Double-Ground Fault

In ungrounded networks (for example, IT) the installation has to be done in a way to keep the likelihood of a double-ground fault neglectably low.

Depending on the use of jumper kits and on the layout of the single- or two-pole circuit, the following maximum rated operating voltage levels have to be respected to make sure that—even in case of a double-ground fault—safe switch-on and switch-off is possible in accordance with utilization category DC22-A.

Rated Operating Voltage U_e Maximum IT Network

DC Switches

DC Switches**Product Description**

Eaton's new offering of PV switches have multiple poles factory-wired, and they are approved for NEC Article 690 applications right from the box. Other manufacturers require the contractor to add jumpers to a two- or three-pole switch, add a neutral, and add labels to meet this requirement. For fusible switches, the new Eaton PV switch requires only one fuse per switch—saving the customer at least one fuse on each switch.

For more information on Eaton's DC Switches, please see **Tab 2.4** of this catalog.

DC Switched Combiners**Contents****Description**

DC Switched Combiners

3

DC Switched Combiners**Product Description**

The Eaton switched combiner (ESC) unites Eaton's 600 Vdc solar disconnect and source-combiner box in one convenient enclosure (1000 Vdc Switched Combiners available late 2012).

For more information on Eaton's DC Switched Combiners, please see **Tab 2.5** of this catalog.

V15-T3-43

Encapsulated Transformers

Product Description

Eaton's family of encapsulated transformers is ideally suited for harsh outdoor environments.

Their standard enclosure is NEMA® 3R rated, and are also available in NEMA 3R stainless steel, or NEMA 4X enclosures. The core and coil assembly is completely embedded in a sand and resin compound that seals out moisture and other contaminants.

Please refer to **Volume 2—Commercial Distribution**, CA08100003E, Tab 2 for more information.

V15-T3-42

Ventilated Transformers/Open Core-Coil Assemblies

Product Description

Eaton offers a complete line of ventilated and totally enclosed non-ventilated transformers, in a variety of K-factor ratings and efficiency levels. Please refer to **Volume 2—Commercial Distribution**, CA08100003E, Tab 2 for additional information on Eaton's standard product offering.

In addition to these standard products, Eaton also offers custom design capabilities to meet the specific requirements of the solar industry. We offer special dimensions and layouts to meet a specific customer's needs. We can also design transformers to meet CEC weighted-efficiency levels, or other efficiency levels if necessary. Please contact your local Eaton representative for additional information on Eaton's custom design capabilities.

Warranty	V15-A1-3

Selling Policy (Supersedes Selling Policy 25-000, dated November 1, 2008)

Terms and Conditions of Sale

The Terms and Conditions of Sale set forth herein, and any supplements which may be attached hereto, constitute the full and final expression of the contract for the sale of products or services (hereinafter referred to as Product(s) or Services by Eaton Corporation (hereinafter referred to as Seller) to the Buyer, and supersedes all prior quotations, purchase orders, correspondence or communications whether written or oral between the Seller and the Buyer. Notwithstanding any contrary language in the Buyer's purchase order, correspondence or other form of acknowledgment, Buyer shall be bound by these Terms and Conditions of Sale when it sends a purchase order or otherwise indicates acceptance of this contract, or when it accepts delivery from Seller of the Products or Services.

THE CONTRACT FOR SALE OF THE PRODUCTS OR SERVICES IS EXPRESSLY LIMITED TO THE TERMS AND CONDITIONS OF SALE STATED HEREIN. ANY ADDITIONAL OR DIFFERENT TERMS PROPOSED BY BUYER ARE REJECTED UNLESS EXPRESSLY AGREED TO IN WRITING BY SELLER. No contract shall exist except as herein provided.

Complete Agreement

No amendment or modification hereto nor any statement, representation or warranty not contained herein shall be binding on the Seller unless made in writing by an authorized representative of the Seller. Prior dealings, usage of the trade or a course of performance shall not be relevant to determine the meaning of this contract even though the accepting or acquiescing party had knowledge of the nature of the performance and opportunity for objection.

Quotations

Written quotations are valid for 30 days from its date unless otherwise stated in the quotation or terminated sooner by notice.

Verbal quotations, unless accepted, expire the same day they are made.

A complete signed order must be received by Seller within 20 calendar days of notification of award, otherwise the price and shipment will be subject to re-negotiation.

Termination and Cancellation

Products

Any order may be terminated by the Buyer only by written notice and upon payment of reasonable termination charges, including all progress billings and all incurred direct manufacturing costs.

Services

Any order may be terminated by the Buyer only by written notice and upon payment of reasonable termination charges including all costs plus profit.

Seller shall have the right to cancel any order at any time by written notice if Buyer breaches any of the terms hereof, becomes the subject of any proceeding under state or federal law for the relief of debtors, or otherwise becomes insolvent or bankrupt, generally does not pay its debts as they become due or makes an assignment for the benefit of creditors.

Appendix 1—General Terms and Conditions of Sale

Effective Date: November 1, 2017

Prices

All prices are subject to change without notice. In the event of a price change, the effective date of the change will be the date of the new price or discount sheet, letter or telegram. All quotations made or orders accepted after the effective date will be on the new basis. For existing orders, the price of the unshipped portion of an order will be the price in effect at time of shipment.

Price Policy—Products and Services

When prices are quoted as firm for quoted shipment, they are firm provided the following conditions are met:

1. The order is released with complete engineering details.
2. Shipment of Products are made, and Services purchased are provided within the quoted lead time.
3. When drawings for approval are required for any Products, the drawings applicable to those Products must be returned within 30* calendar days from the date of the original mailing of the drawings by Seller. The return drawings must be released for manufacture and shipment and must be marked "APPROVED" or "APPROVED AS NOTED." Drawing re-submittals which are required for any other reason than to correct Seller errors will not extend the 30-day period.

* 60 days for orders through contractors to allow time for their review and approval before and after transmitting them to their customers.

If the Buyer initiates or in any way causes delays in shipment, provision of Services or return of approval drawings beyond the periods stated above, the price of the Products or Services will be increased 1% per month or fraction thereof up to a maximum of 18 months from the date of the Buyer's order. For delays resulting in shipment or provision of Services beyond 18 months from the date of the Buyer's order, the price must be renegotiated.

Price Policy—BLS

Refer to Price Policy 25-050.

Minimum Billing

Orders less than \$1,000 will be assessed a shipping and handling charge of 5% of the price of the order, with a minimum charge of \$25.00 unless noted differently on Product discount sheets.

Taxes

The price does not include any taxes. Buyer shall be responsible for the payment of all taxes applicable to, or arising from the transaction, the Products, its sale, value, or use, or any Services performed in connection therewith regardless of the person or entity actually taxed.

Terms of Payment

Products

Acceptance of all orders is subject to the Buyer meeting Seller's credit requirements. Terms of payment are subject to change for failure to meet such requirements. Seller reserves the right at any time to demand full or partial payment before proceeding with a contract of sale as a result of changes in the financial condition of the Buyer. Terms of Payment are either Net 30 days from the date of invoice of each shipment or carry a cash discount based on Product type. Specific payment terms for Products are outlined in the applicable Product discount schedules.

Services

Terms of payment are net within 30 days from date of invoice for orders amounting to less than \$50,000.00.

Terms of payment for orders exceeding \$50,000.00 shall be made according to the following:

1. Twenty percent (20%) of order value with the purchase order payable 30 days from date of invoice.
2. Eighty percent (80%) of order value in equal monthly payments over the performance period payable 30 days from date of invoice.

Except for work performed (i) under a firm fixed price basis or (ii) pursuant to terms of a previously priced existing contract between Seller and Buyer, invoices for work performed by Seller shall have added and noted on each invoice a charge of 3% (over and above the price of the work) which is related to Seller compliance with present and proposed environmental, health, and safety regulations associated with prescribed requirements covering hazardous materials management and employee training, communications, personal protective equipment, documentation and record keeping associated therewith.

Adequate Assurances

If, in the judgment of Seller, the financial condition of the Buyer, at any time during the period of the contract, does not justify the terms of payment specified, Seller may require full or partial payment in advance.

Delayed Payment

If payments are not made in accordance with these terms, a service charge will, without prejudice to the right of Seller to immediate payment, be added in an amount equal to the lower of 1.5% per month or fraction thereof or the highest legal rate on the unpaid balance.

Freight

Freight policy will be listed on the Product discount sheets, or at option of Seller one of the following freight terms will be quoted.

F.O.B.—P/S—Frt./Ppd. and Invoiced

Products are sold F.O.B. point of shipment freight prepaid and invoiced to the Buyer.

F.O.B.—P/S—Frt./Ppd. and Allowed

Products sold are delivered F.O.B. point of shipment, freight prepaid and included in the price.

F.O.B. Destination—Frt./Ppd. and Allowed

At Buyer's option, Seller will deliver the Products F.O.B. destination freight prepaid and 2% will be added to the net price.

The term "freight prepaid" means that freight charges will be prepaid to the accessible common carrier delivery point nearest the destination for shipments within the United States and Puerto Rico unless noted differently on the Product discount sheets. For any other destination, contact Seller's representative.

Shipment and Routing

Seller shall select the point of origin of shipment, the method of transportation, the type of carrier equipment and the routing of the shipment.

If the Buyer specifies a special method of transportation, type of carrier equipment, routing, or delivery requirement, Buyer shall pay all special freight and handling charges.

When freight is included in the price, no allowance will be made in lieu of transportation if the Buyer accepts shipment at factory, warehouse, or freight station or otherwise supplies its own transportation.

Risk of Loss

Risk of loss or damage to the Products shall pass to Buyer at the F.O.B. point.

Concealed Damage

Except in the event of F.O.B. destination shipments, Seller will not participate in any settlement of claims for concealed damage.

When shipment has been made on an F.O.B. destination basis, the Buyer must unpack immediately and, if damage is discovered, must:

1. Not move the Products from the point of examination.
2. Retain shipping container and packing material.
3. Notify the carrier in writing of any apparent damage.
4. Notify Seller representative within 72 hours of delivery.
5. Send Seller a copy of the carrier's inspection report.

Witness Tests/Customer Inspection

Standard factory tests may be witnessed by the Buyer at Seller's factory for an additional charge calculated at the rate of \$2,500 per day (not to exceed eight (8) hours) per Product type. Buyer may final inspect Products at the Seller's factory for \$500 per day per Product type.

Witness tests will add one (1) week to the scheduled shipping date. Seller will notify Buyer fourteen (14) calendar days prior to scheduled witness testing or inspection. In the event Buyer is unable to attend, the Parties shall mutually agree on a rescheduled date. However, Seller reserves the right to deem the witness tests waived with the right to ship and invoice Products.

Held Orders

For any order held, delayed or rescheduled at the request of the Buyer, Seller may, at its sole option (1) require payment to be based on any reasonable basis, including but not limited to the contract price, and any additional expenses, or cost resulting from such a delay; (2) store Products at the sole cost and risk of loss of the Buyer; and/or (3) charge to the Buyer those prices under the applicable price policy. Payment for such price, expenses and costs, in any such event, shall be due by Buyer within thirty (30) days from date of Seller's invoice. Any order so held delayed or rescheduled beyond six (6) months will be treated as a Buyer termination.

Drawing Approval

Seller will design the Products in line with, in Seller's judgment, good commercial practice. If at drawing approval Buyer makes changes outside of the design as covered in their specifications, Seller will then be paid reasonable charges and allowed a commensurate delay in shipping date based on the changes made.

Drawing Re-Submittal

When Seller agrees to do so in its quotation, Seller shall provide Buyer with the first set of factory customer approval drawing(s) at Seller's expense. The customer approval drawing(s) will be delivered at the quoted delivery date. If Buyer requests drawing changes or additions after the initial factory customer approval drawing(s) have been submitted by Seller, the Seller, at its option, may assess Buyer drawing charges. Factory customer approval drawing changes required due to misinterpretation by Seller will be at Seller's expense. Approval drawings generated by Bid Manager are excluded from this provision.

Warranty

Warranty for Products

Seller warrants that the Products manufactured by it will conform to Seller's applicable specifications and be free from failure due to defects in workmanship and material for one (1) year from the date of installation of the Product or eighteen (18) months from the date of shipment of the Product, whichever occurs first.

In the event any Product fails to comply with the foregoing warranty, Seller will, at its option, either (a) repair or replace the defective Product, or defective part or component thereof, F.O.B. Seller's facility freight prepaid, or (b) credit Buyer for the purchase price of the Product. All warranty claims shall be made in writing.

Seller requires all non-conforming Products be returned at Seller's expense for evaluation unless specifically stated otherwise in writing by Seller.

This warranty does not cover failure or damage due to storage, installation, operation or maintenance not in conformance with Seller's recommendations and industry standard practice or due to accident, misuse, abuse or negligence. This warranty does not cover reimbursement for labor, gaining access, removal, installation, temporary power or any other expenses, which may be incurred in connection with repair or replacement.

This warranty does not apply to equipment not manufactured by Seller. Seller limits itself to extending the same warranty it receives from the supplier.

Appendix 1—General Terms and Conditions of Sale

Effective Date: November 1, 2017

Extended Warranty for Products

If requested by the Buyer and specifically accepted in writing by Seller, the foregoing standard warranty for Products will be extended from the date of shipment for the period and price indicated below:

- 24 months—2% of Contract Price
- 30 months—3% of Contract Price
- 36 months—4% of Contract Price

Special Warranty (In and Out) for Products

If requested by the Buyer and specifically accepted in writing by Seller, Seller will, during the warranty period for Products, at an additional cost of 2% of the contract price, be responsible for the direct cost of:

1. Removing the Product from the installed location.
2. Transportation to the repair facility and return to the site.
3. Reinstallation on site.

The total liability of Seller for this Special Warranty for Products is limited to 50% of the contract price of the particular Product being repaired and excludes expenses for removing adjacent apparatus, walls, piping, structures, temporary service, etc.

Warranty for Services

Seller warrants that the Services performed by it hereunder will be performed in accordance with generally accepted professional standards.

The Services, which do not so conform, shall be corrected by Seller upon notification in writing by the Buyer within one (1) year after completion of the Services.

Unless otherwise agreed to in writing by Seller, Seller assumes no responsibility with respect to the suitability of the Buyer's, or its customer's, equipment or with respect to any latent defects in equipment not supplied by Seller. This warranty does not cover damage to Buyer's, or its customer's, equipment, components or parts resulting in whole or in part from improper maintenance or operation or from their deteriorated condition. Buyer will, at its cost, provide Seller with unobstructed access to the defective Services, as well as adequate free working space in the immediate vicinity of the defective Services and such facilities and systems, including, without limitation, docks, cranes and utility disconnects and connects, as may be necessary in order that Seller may perform its warranty obligations. The conducting of any tests shall be mutually agreed upon and Seller shall be notified of, and may be present at, all tests that may be made.

Warranty for Power Systems Studies

Seller warrants that any power systems studies performed by it will conform to generally accepted professional standards. Any portion of the study, which does not so conform, shall be corrected by Seller upon notification in writing by the Buyer within six (6) months after completion of the study. All warranty work shall be performed in a single shift straight time basis Monday through Friday. In the event that the study requires correction of warranty items on an overtime schedule, the premium portion of such overtime shall be for the Buyer's account.

Limitation on Warranties for Products, Services and Power Systems Studies

THE FOREGOING WARRANTIES ARE EXCLUSIVE EXCEPT FOR WARRANTY OF TITLE. SELLER DISCLAIMS ALL OTHER WARRANTIES INCLUDING ANY IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

CORRECTION OF NON-CONFORMITIES IN THE MANNER AND FOR THE PERIOD OF TIME PROVIDED ABOVE SHALL CONSTITUTE SELLER'S SOLE LIABILITY AND BUYER'S EXCLUSIVE REMEDY FOR FAILURE OF SELLER TO MEET ITS WARRANTY OBLIGATIONS, WHETHER CLAIMS OF THE BUYER ARE BASED IN CONTRACT, IN TORT (INCLUDING NEGLIGENCE OR STRICT LIABILITY), OR OTHERWISE.

Asbestos

Federal Law requires that building or facility owners identify the presence, location and quantity of asbestos containing material (hereinafter "ACM") at work sites. Seller is not licensed to abate ACM. Accordingly, for any contract which includes the provision of Services, prior to (i) commencement of work at any site under a specific Purchase Order, (ii) a change in the work scope of any Purchase Order, the Buyer will certify that the work area associated with the Seller's scope of work includes the handling of Class II ACM, including but not limited to generator wedges and high temperature gaskets which include asbestos materials. The Buyer shall, at its expense, conduct abatement should the removal, handling, modification or reinstallation, or some or all of them, of said Class II ACM be likely to generate airborne asbestos fibers; and should such abatement affect the cost of or time of performance of the work, then Seller shall be entitled to an equitable adjustment in the schedule, price and other pertinent affected provisions of the contract.

Compliance with Nuclear Regulation

Seller's Products are sold as commercial grade Products not intended for application in facilities or activities licensed by the United States Nuclear Regulatory Commission for atomic purposes. Further certification will be required for use of the Products in any safety-related application in any nuclear facility licensed by the U.S. Nuclear Regulatory Commission.

Returning Products

Authorization and shipping instructions for the return of any Products must be obtained from Seller before returning the Products.

When return is occasioned due to Seller error, full credit including all transportation charges will be allowed.

Product Notices

Buyer shall provide the user (including its employees) of the Products with all Seller supplied Product notices, warnings, instructions, recommendations, and similar materials.

Force Majeure

Seller shall not be liable for failure to perform or delay in performance due to fire, flood, strike or other labor difficulty, act of God, act of any governmental authority or of the Buyer, riot, embargo, fuel or energy shortage, car shortage, wrecks or delays in transportation, or due to any other cause beyond Seller's reasonable control. In the event of delay in performance due to any such cause, the date of delivery or time for completion will be extended by a period of time reasonably necessary to overcome the effect of such delay.

Liquidated Damages

Contracts which include liquidated damage clauses for failure to meet shipping or job completion promises are not acceptable or binding on Seller, unless such clauses are specifically accepted in writing by an authorized representative of the Seller at its headquarters office.

Patent Infringement

Seller will defend or, at its option, settle any suit or proceeding brought against Buyer, or Buyer's customers, to the extent it is based upon a claim that any Product or part thereof, manufactured by Seller or its subsidiaries and furnished hereunder, infringes any United States patent, other than a claim of infringement based upon use of a Product or part thereof in a process, provided Seller is notified in reasonable time and given authority, information and assistance (at Seller's expense) for the defense of same. Seller shall pay all legal and court costs and expenses and court-assessed damages awarded therein against Buyer resulting from or incident to such suit or proceeding. In addition to the foregoing, if at any time Seller determines there is a substantial question of infringement of any United States patent, and the use of such Product is or may be enjoined, Seller may, at its option and expense: either (a) procure for Buyer the right to continue using and selling the Product; (b) replace the Product with non-infringing apparatus; (c) modify the Product so it becomes non-infringing; or (d) as a last resort, remove the Product and refund the purchase price, equitably adjusted for use and obsolescence. In no case does Seller agree to pay any recovery based upon its Buyer's savings or profit through use of Seller's Products whether the use be special or ordinary. The foregoing states the entire liability of Seller for patent infringement.

The preceding paragraph does not apply to any claim of infringement based upon: (a) any modification made to a Product other than by Seller; (b) any design and/or specifications of Buyer to which a Product was manufactured; or (c) the use or combination of Product with other products where the Product does not itself infringe. As to the above-identified claim situations where the preceding paragraph does not apply, Buyer shall defend and hold Seller harmless in the same manner and to the extent as Seller's obligations described in the preceding paragraph. Buyer shall be responsible for obtaining (at Buyer's expense) all license rights required for Seller to be able to use software products in the possession of Buyer where such use is required in order to perform any Service for Buyer.

With respect to a Product or part thereof not manufactured by Seller or its subsidiaries, Seller will attempt to obtain for Buyer, from the supplier(s), the patent indemnification protection normally provided by the supplier(s) to customers.

Compliance with OSHA

Seller offers no warranty and makes no representation that its Products comply with the provisions or standards of the Occupational Safety and Health Act of 1970, or any regulation issued thereunder. In no event shall Seller be liable for any loss, damage, fines, penalty or expenses arising under said Act.

Limitation of Liability

THE REMEDIES OF THE BUYER SET FORTH IN THIS CONTRACT ARE EXCLUSIVE AND ARE ITS SOLE REMEDIES FOR ANY FAILURE OF SELLER TO COMPLY WITH ITS OBLIGATIONS HEREUNDER.

NOTWITHSTANDING ANY PROVISION IN THIS CONTRACT TO THE CONTRARY, IN NO EVENT SHALL SELLER BE LIABLE IN CONTRACT, IN TORT (INCLUDING NEGLIGENCE OR STRICT LIABILITY) OR OTHERWISE FOR DAMAGE TO PROPERTY OR EQUIPMENT OTHER THAN PRODUCTS SOLD HEREUNDER, LOSS OF PROFITS OR REVENUE, LOSS OF USE OF PRODUCTS, COST OF CAPITAL, CLAIMS OF CUSTOMERS OF THE BUYER OR ANY SPECIAL, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES WHATSOEVER, REGARDLESS OF WHETHER SUCH POTENTIAL DAMAGES ARE FORESEEABLE OR IF SELLER HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

THE TOTAL CUMULATIVE LIABILITY OF SELLER ARISING FROM OR RELATED TO THIS CONTRACT WHETHER THE CLAIMS ARE BASED IN CONTRACT, IN TORT (INCLUDING NEGLIGENCE OR STRICT LIABILITY) OR OTHERWISE, SHALL NOT EXCEED THE PRICE OF THE PRODUCT OR SERVICES ON WHICH SUCH LIABILITY IS BASED.

Volume 15: Solar Inverters and Electrical Balance of System

Powering Business Worldwide

Electrical Balance of System for Residential Installations

Our roots in the electrical business run deep. Eaton is a global technology leader in electrical components and systems for power quality, distribution and control. Our industry leading products and services are designed to deliver:

- Reliability
- Efficiency
- Safety

Powering Business Worldwide

Eaton Solar

One-stop BOS shopping

We can assemble a package of Balance of System (BOS) equipment that is ready to be installed. You will have one vendor, one purchase order, one delivery schedule and a single point of accountability.

- We can customize our solutions to the physical dimensions of your home
- Our BOS solutions will work with many photovoltaic (PV) panel manufacturers
- We offer a wide range of solar power solutions

Eaton product solutions combine:

- DC switching (UL98 and UL98B)
- Robust inverter technology – same reliable technology that is used in our UPS systems (UL1741)
- AC switching and protection

EATON'S ELECTRICAL BALANCE OF SYSTEM

- A** DC combiners and switches (600 Vdc)
- B** Solar inverters (600 Vdc)
- C** AC meter breakers, loadcenters and switches
- D** Electric vehicle charging
- Eaton Certified Contractor Network

Electrical Balance of System for Residential Installations

A DC combiners and switches (600 Vdc)

Eaton's solutions for protecting and switching DC current are designed and tested to meet UL1741, UL98 and UL98B requirements for solar electrical balance of system equipment.

B Solar inverters (600 Vdc)

Eaton's solar inverters use the same robust, reliable technology we put in our uninterruptible power systems (UPS). Solar inverters are designed and tested to meet UL1741 standards.

C AC meter breakers, load centers and switches

Eaton's AC switching and protection solutions are designed to meet 2008 NEC® Article 690.64(B)(2) sizing requirements for solar photovoltaic systems.

D Electric vehicle charging

Eaton is uniquely positioned to create a safe and reliable infrastructure that supports the use of electric vehicles. Our family of charging solutions is the most robust, flexible offering on the market.

DC combiner boxes

- Combines input photovoltaic strings forming a single output
- Options include string monitoring and surge protection

Solar inverters: 3.8 kW - 7 kW

- CEC rated for 97% efficiency
- Integral AC/DC switching with four-string combiner

Solar-ready meter breaker

- Complete family of circuit breakers for all applications

EV charging station

DC disconnect switches

- Isolates photovoltaic source
- Provides rooftop disconnect required by fire departments

Solar-ready loadcenter

AC disconnect switches

- Isolates utility feed

Eaton Certified Contractor Network

Electrical Balance of System for Commercial Installations

As your single-source supplier for a solar balance of system package, Eaton can help you build a solar system tailored to the needs of a retail, commercial or institutional site with a focus on:

- Reliability
- Efficiency
- Safety

We know space is always at a premium. That's why we offer totally integrated power control and management solutions like inverters and solar switchboards. These space-savings lineups house the system's DC switching equipment, solar inverter and AC switching equipment. The equipment is pre-configured for easy installation, saving space, time and cost.

We can also help you customize your electrical system package to the requirements of your facility, including the physical dimensions of your building or installation. In addition, our regional satellites and service centers are knowledgeable about local electrical codes and regulations in your area, which allows us to customize your solutions accordingly.

Eaton product solutions combine:

- DC switching (UL98 and UL98B)
- DC combiners (UL1741)
- Robust inverter technology
- AC switching and protection
- Integrated metering
- Customized packaging and pre-configuration

EATON'S ELECTRICAL BALANCE OF SYSTEM

- A** DC combiners, switches and switched combiners (600 Vdc)
- B** Solar inverters (600 Vdc) and solar transformers
- C** AC switchgear
- D** Monitoring and metering
- E** Electric vehicle charging
- F** Electrical solar services

Electrical Balance of System for Utility Installations

Our roots in the electrical industry run deep. As a bankable partner with 100 years of innovation, we are your single source supplier of electrical balance of system solutions to help improve:

- Reliability
- Efficiency
- Safety

Eaton provides complete electrical balance of system solutions from the combiners, to the inverter, to the medium voltage interconnection to the grid.

Our NEMA 3R enclosures and outdoor electrical houses help protect equipment from the elements and keep it operating.

Eaton can also help support solar farms once they are operating. We offer an extensive selection of operations training for electrical power systems equipment, and we are a leader in electrical safety training. We can even help monitor and manage solar system performance with our remote performance monitoring services.

Eaton product solutions combine:

- DC switching (UL98 and UL98B)
- DC combiners (UL1741)
- Robust inverter technology – same reliable technology that is used in our battery storage inverters
- AC switchgear
- Integrated metering
- Customized packaging and pre-configuration

Commercial and Utility Electrical Solar Services

Eaton's Electrical Services and Systems engineers can help manage the power of the sun. We offer the convenience of turnkey project teams who can design, build and support your solar power system.

Powering Business Worldwide

Design

Pre-installation services

Eaton's Electrical Services and Systems (EESS) team can help you choose a solar system that makes technical and financial sense. Our comprehensive solar site assessment service evaluates topics like optimal panel placement, estimated revenues and projected maintenance costs. And our experienced power system engineers can design a solar system that will always operate at peak performance.

Build

Installation services

Our field service engineers can install, start up and commission any manufacturer's solar power equipment quickly using our efficient, standardized processes. Your solar system will be up and running safely and reliably.

Support

Post-installation services

Eaton's remote performance monitoring services track solar power outputs and identify trends over time. That makes it easier to spot performance trends.

Additional services

Eaton offers many additional services that help keep workers safe and clean, reliable power flowing.

- Arc flash hazard analysis and solutions
- Power reliability studies
- LEED certification audits

Design

- Solar site assessments including technical and financial analysis
- Solar system design including shading and annual kWh output analysis
- Photovoltaic panel design
- Electrical balance of system design
- Monitoring system design (meters and software)
- Building connection and substation design
- Turnkey construction project management, including design and procurement services

Build

- Turnkey construction projects
- Photovoltaic panel installation
- Electrical balance of system installation
- Monitoring system installation (meters and software)
- Building infrastructure connection
- Substation construction
- Utility grid interconnection, synchronizing and controls
- Solar system commissioning and performance verification

Support

- Remote performance monitoring (metering and data collection)
- Ongoing energy production monitoring and rebate certifications
- Building energy audits
- Site power quality, load shedding and future expansion analysis
- Maintenance
- Operations training for site personnel
- Safety training

Dimensions, Weights and Ratings

Dimensions, weights and ratings given in this catalog **are approximate and should not be used for construction purposes**. Drawings containing exact dimensions are available upon request. All listed product specifications and ratings are subject to change without notice. Photographs are representative of production units.

Terms and Conditions

All prices and discounts are subject to change without notice. When price changes occur, they are published in Eaton's *Price and Availability Digest* (PAD). All orders accepted by Eaton's Electrical Sector are subject to the general terms and conditions as set forth in Appendix 1—Eaton Terms & Conditions.

Technical and Descriptive Publications

This catalog contains brief technical data for proper selection of products. Further information is available in the form of technical information publications and illustrated brochures. If additional product information is required, contact your local Eaton Products Distributor, call **1-800-525-2000** or visit our website at **www.eaton.com**.

Compliance with Nuclear Regulation 10 CFR 21

Eaton products are sold as commercial grade products not intended for application in facilities or activities licensed by the United States Nuclear Regulatory Commission for atomic purposes, under 10 CFR 21. Further certification will be required for use of these products in a safety-related application in any nuclear facility licensed by the U.S. Nuclear Regulatory Commission.

WARNING

The installation and use of Eaton products should be in accordance with the provisions of the U.S. National Electrical Code® and/or other local codes or industry standards that are pertinent to the particular end use. Installation or use not in accordance with these codes and standards could be hazardous to personnel and/or equipment.

These catalog pages do not purport to cover all details or variations in equipment, nor to provide for every possible contingency to be met in connection with installation, operation or maintenance. Should further information be desired or should particular problems arise which are not covered sufficiently for the purchaser's purposes, the matter should be referred to the local Eaton Products Distributor or Sales Office. The contents of this catalog shall not become part of or modify any prior or existing agreement, commitment or relationship. The sales contract contains the entire obligation of Eaton's Electrical Sector. The warranty contained in the contract between the parties is the sole warranty of Eaton. Any statements contained herein do not create new warranties or modify the existing warranty.

Powering Business Worldwide

Eaton is a global leader in power distribution, power quality, control and automation, and monitoring products.

At Eaton, we believe a reliable, efficient and safe power system is the foundation of every successful enterprise. Through innovative technologies, cutting-edge products and our highly skilled services team, we empower businesses around the world to achieve a powerful advantage.

In addition, Eaton is committed to creating and maintaining powerful customer relationships built on a foundation of excellence. From the products we manufacture to our dedicated customer service and support, we know what's important to you.

Solutions

Eaton takes the complexity out of power systems management with a holistic and strategic approach, leveraging our industry-leading technology, solutions and services. We focus on the following three areas in all we do:

- Reliability—maintain the appropriate level of power continuity without disruption or unexpected downtime
- Efficiency—minimize energy usage, operating costs, equipment footprint and environmental impact
- Safety—identify and mitigate electrical hazards to protect what you value most

Using the Eaton Catalog Library

As we grow, it becomes increasingly difficult to include all products in one or two comprehensive catalogs. Knowing that each user has their specific needs, we have created a library of catalogs for our products that when complete, will contain 15 volumes. Since the volumes will continuously be a work in progress and updated, each volume will stand alone. Refer to our volume directory, MZ08100001E, for a quick glance of where to look for the products you need. The 15 volumes include:

- Volume 1—Residential and Light Commercial (CA08100002E)
- Volume 2—Commercial Distribution (CA08100003E)
- Volume 3—Power Distribution and Control Assemblies (CA08100004E)
- Volume 4—Circuit Protection (CA08100005E)
- Volume 5—Motor Control and Protection (CA08100006E)
- Volume 6—Solid-State Motor Control (CA08100007E)
- Volume 7—Logic Control, Operator Interface and Connectivity Solutions (CA08100008E)
- Volume 8—Sensing Solutions (CA08100010E)
- Volume 9—Original Equipment Manufacturer (CA08100011E)
- Volume 10—Enclosed Control (CA08100012E)
- Volume 11—Vehicle and Commercial Controls (CA08100013E)
- Volume 12—Aftermarket, Renewal Parts and Life Extension Solutions (CA08100014E)
- Volume 13—Counters, Timers and Tachometers (CA08100015E)—Available in electronic format only
- Volume 14—Fuses (CA08100016E)—Available in electronic format only
- Volume 15—Solar Inverters and Electrical Balance of System (CA08100018E)

These volumes are not all-inclusive of every product, but they are meant to be an overview of our product lines. For our full range of product solutions and additional product information, consult Eaton.com/electrical and other catalogs and product guides in our literature library. These references include:

- The Consulting Application Guide (CA08104001E)
- The Eaton Power Quality Product Guide (COR01FYA)

If you don't have the volume that contains the product or information that you are looking for, not to worry. You can access every volume of the catalog library at Eaton.com/electrical in the Literature Library.

By installing our Automatic Tab Updater (ATU), you can be sure you always have the most recent version of each volume and tab.

Icons

Green Leaf

Eaton Green Solutions are products, systems or solutions that represent Eaton benchmarks for environmental performance. The green leaf symbol is our promise that the solution has been reviewed and documented as offering exceptional, industry-leading environmental benefits to customers, consumers and our communities. Though all of Eaton's products and solutions are designed to meet or exceed applicable government standards related to protecting the environment, our products with the Green Leaf designation further provide "exceptional environmental benefit."

Learn Online

When you see the Learn Online icon, go to Eaton.com/electrical and search for the product or training page. There you will find 100-level training courses, podcasts, webcasts or games and puzzles to learn more.

Drawings Online

When you see the Drawings Online icon, go to Eaton.com/electrical and find the products page. There you will find a tab that includes helpful product drawings and illustrations.

Contact Us

If you need additional help, you can find contact information under the Customer Care heading of Eaton.com/electrical.

Eaton Grid-Tied Solar Inverter (3.8–7 kW)

Product Overview

The Eaton Grid-Tied Solar Inverter’s breakthrough technology and features deliver maximum return on investment for consumers. Eaton solar inverter units offer the highest efficiency and voltage operating ranges available in order to maximize energy yield.

Installation time and costs are greatly reduced through packaging the combiner box, AC/DC disconnects and wire raceway with the inverter. The design also simplifies service on the unit through a two-piece modular configuration, which allows the wiring box to remain connected and mounted if the need ever arises to replace the power module.

Features and Benefits

Ratings

- 3800W, 4000W, 5000W, 6000W, 7000W

Maximum Energy Harvest

- 97% CEC efficiency
- Broad voltage operating range (105–500 Vdc) for superior performance in low light and high temperature environments
- Transformerless design

Saves Installation Time and Cost

- Integrated PV system AC/DC disconnect switch
- Four branch circuit-rated negative and positive fused inputs
- Integrated NEC®-compliant wire raceway

Contents

Description

Eaton Grid-Tied Solar Inverter (3.8–7 kW)

Product Selection/Technical Data

and Specifications

Page

V15-T1-3

Application Description

Available in four individual sizes: 4 kW, 5 kW, 6 kW and 7 kW respectively. The 4 kW unit has the ability to be field-converted to output 3.8 kW to accommodate lower rated AC loadcenters. This inverter family is to be used in grid-tied applications only, thus having the ability to feed power to the utility grid. The design focus of these residential/light commercial inverters was on maximizing energy harvest and minimizing installation time and cost. The inverters boast an extremely high efficiency and a wide DC voltage operating range, while fully integrating the complete balance of system into the unit, including a four-string DC combiner, a DC disconnect switch, an AC disconnect switch and a wire raceway.

Versatility in Installation

- Field-selectable voltage output: 208/240/277 Vac
- LCD display with side pushbutton for nighttime monitoring
- NEMA® 3R enclosure
- Two-piece modular design

Eaton Value

- A global leader in inverter technology
- Complete balance of system provider
- Eaton reputation for quality, support, and service
- Installation certification via Eaton Certified Contractor Network (ECCN)

Standards and Certifications

- ETL Listed (in compliance with UL® Std 1741)
- CSA® Listed (Std C22.2 No. 107.1)
- CEC Listed

Solar Power Center Loadcenters and Meter Breakers

Product Description

Eaton’s Solar Power Centers combine both utility power and solar photovoltaic (PV) power into one enclosure. Solar Power Centers can be applied as a component of a complete PV electrical system. Eaton offers the most complete line of Balance of System (BOS) products in the industry, along with a wide variety of configurations including loadcenters and meter breakers.

The Solar Power Centers feature industry-exclusive factory-installed permanent markings, which help to ensure National Electrical Code® (NEC) compliance. Required by the NEC, these markings enable quick and easy identification of product ratings and location of the parallel energy source disconnect. Prior to installation, contact your local utility to confirm approval.

Product Types

Loadcenters are enclosures specifically designed to house the branch circuit breakers and wiring required to distribute power to individual circuits. They contain either a main breaker when used at the service entrance point or a main lug when used as a sub-panel to add circuits to existing service. The main breaker protects the entire panel and can be used as a service disconnect. The branch breakers protect the wires leading to individual electrical loads such as fixtures and outlets.

Contents

<i>Description</i>	<i>Page</i>
Solar Power Center Loadcenters and Meter Breakers	
Features	V15-T1-5
Standards and Certifications	V15-T1-5
Product Selection	V15-T1-7
Additional Information	V15-T1-8

Meter breakers are service entrance equipment that consist of a single meter socket and loadcenter (circuit breaker distribution section) or meter socket and main breaker combined in one enclosure. Sometimes called Combos, All-in-Ones, Meter Centers or Meter Mains, these units are increasing in popularity as the socket and loadcenter or main breaker are located in one location, thus providing the contractor with a labor and material savings when installing.

Meter breakers are most often sold in the western, southwestern and southeastern United States. The popularity of meter breakers is continuing to increase as more utilities deregulate and pass the responsibility of supplying watt-hour meter sockets on to the electrical contractor.

Application Description

How to Size a Solar-Ready Loadcenter or a Meter Breaker for your Solar Application

The National Electrical Code (2008) Section 690.64(B)(2)/ (2011) Section 705.12(D)(2) states: "The sum of the ampere ratings of overcurrent devices in circuits supplying power to a busbar or conductor shall not exceed 120 percent of the rating of the busbar or conductor."

For example: A 200A main breaker loadcenter + a backfed 70A PV breaker = 270A = 120% of the 225A busbar rating. In 2014, 120% was extended to 125% of the conductor rating.

Note: Check with local utility for exact requirements.

Panel Main Breaker Ampere Rating	Standard Bus Ampere Rating	Maximum Total Ampere Rating of all PV Backfed Mains	Maximum Ampere Rating of Panel Mains + PV Mains
100	100	20	120
100	125	50	150
125	125	25	150
200	200	40	240
200	225	70	270
225	225	45	270
400	400	80	480

Features and Benefits

Solar Power Center

- Up to 225A rated copper bussing maximizes solar source up to 70A for standard units
- 100A, 125A and 200A main breakers available factory installed, which provides additional flexibility in PV sizing
- Main breaker and PV backfed main are located at opposite ends of the distribution panel
- Single-phase, three-wire 120/240 Vac
- Overhead and underground feed applications
- Padlocking provisions
- Surface and flush designs available
- Top or bottom exit of load wiring
- Limited lifetime warranty for Type CH and 10-year warranty for Type BR

Loadcenters

- Type CH features plug-on neutral loadcenters and breakers that enable the contractor to connect the breaker directly to the neutral bar, eliminating the need for wiring a pigtail
- Type CH features unique stab design, which provides a tight connection to the bus
- Top or bottom feed
 - Straight-in wiring saves labor and material
 - Only one panel for either application—no modifications necessary
- Extra 1.50-inch (38.1 mm) knockout for bundling enables easier installation
- Drywall marking on enclosure indicates proper mounting depth for flush applications
- Unique sandalwood finish is aesthetically appealing with scratch-resistant powder coating
- Silver flash plated copper bus provides superior conductivity

Meter Breakers

- Meter socket and distribution section are located in one enclosure, which provides labor and material savings
- EUSERC / West Coast and Non-EUSERC designs
- Ring, ringless and lever bypass designs
- 7-inch-deep designs available, which is ideal for stucco homes
- Endwall knockouts are easily accessible for future wiring without damaging stucco

Standards and Certifications

- Complies with NEC (2008) Section 690.64(B) / (2011) Section 705.12(D), which identifies the acceptable installation and marking requirements for utility interactive solar inverters
- UL Listed
- Non-EUSERC
- EUSERC/West Coast

Charging Stations

Product Description

Eaton's established excellence in both the automotive and electrical distribution/control industries have created a perfect platform for all electrical vehicle charging needs. Whether it's a residential system, a commercial endeavor or a system to support fleet electric vehicles, Eaton has the products and the depth of experience to support, install and service electric vehicle chargers.

Features

- Eaton has been managing power systems (electrical, fluid, and air) for over 100 years
- Eaton is a Tier 1 Automotive Supplier. This connectivity with the major automotives enables Eaton to be on the forefront of emerging vehicle technologies
- Turnkey installation solutions through Eaton Engineering Services (EES) and Eaton Certified Contractor Network (ECCN) throughout the United States and Canada
- Eaton is the only provider of a full family of electric vehicle charging products
- Eaton provides a one stop solution for all your electrical distribution needs
- Restricted accessibility options such as credit card and radio frequency identification (RFID)

Level 1 Universal Receptacle

Product Description

Eaton's 120 Vac Level 1 Universal Receptacle Charging Station provides a safe, reliable means for charging up to four vehicles at a time. It is the perfect solution for buildings that require multiple-vehicle charging, such as apartments and offices.

This innovative charging station provides a universal receptacle for up to four EVs. It's perfect for charging electric cars, e-bikes, NEVs, electric service vehicles and golf carts, simultaneously. For applications that require more than four vehicles to be charged, Eaton's Level 1 Universal Receptacle Charging Stations can be connected in a series with optional utility-grade sub-metering.

Features

- Perfect for charging electric vehicles (with their respective cordsets), e-bikes, NEVs, electric service vehicles, and golf carts
- 110/120 Vac
- 20, 40, and 80A units available
- Charge up to four vehicles
- Pedestal and bollard styles available
- Locking provision to prevent cordset theft
- Support hook to prevent unintentional unplugging with heavier EV cordsets

Standards and Certifications

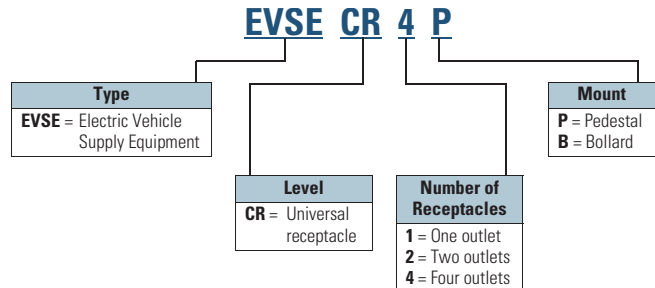

- NEC 625 compliant
- UL Listed to UL 2594 for EV use

- Charging stations can be connected in series
- NEMA 5-20 T-slot receptacles
- Rugged stainless steel construction
- Indoor/outdoor rated
- Optional LED lighting available
- Optional utility grade sub-metering
- Customization available

Level 2 Charging Station

Level 2 Charging Station

Product Description

Using an industry standard J1772 30A or 70A connector, the Level 2 charging station will easily fill a depleted all-electric vehicle battery in three to four hours while the owner is working, shopping or sleeping. The Level 2 charging station is ideal for residential or commercial EV charging applications.

Features

- Charge electric vehicles up to 5 times faster than with a vehicle's cordset
- 208/240 Vac
- 16 and 30A units available
- Wallmount and pedestal styles
- Quick and easy installation
- Rugged stainless steel construction
- Indoor/outdoor rated
- Auto-reset feature
- Hardwire connected
- Optional advanced cord management to protect SAE J1772 connector
- Standard 24 foot cord
- Optional LED lighting available
- Optional utility grade sub-metering
- Customization available

Electric Vehicle Simulator

Product Description

To ensure correct installation of Electric Vehicle Chargers, Eaton introduces the EVSE Electric Vehicle Simulator. Eaton's EV Simulator allows installers to immediately test the functionality of the EVSE on-site during installation.

Features

- Confirm proper operation of any J1772 compliant EVSE without the need of an actual electric vehicle
- Rugged case is perfect for service personnel
- Easy-to-follow testing instructions printed on unit
- Ready to charge
- Ground fault simulation
- Charging indicator
- Pilot signal test points for oscilloscopes

Electric Vehicle Charging Station Pedestal

Product Description

Plug-in electric vehicles are becoming popular due to rising fuel costs and environmental concerns.

Eaton's EV Charging Station provides a safe and reliable means to quickly power up electric vehicles.

Features

- EV Charging Pedestals ship with EV Chargers mounted and pre-wired
- Single or dual EVSE pedestal options
- Available with Eaton Level 1 and Level 2 charging stations
- Quick and easy installation
- Rugged stainless steel construction
- Indoor/outdoor rated
- Standard 24 foot cord
- Optional utility-grade sub-metering
- Greater flexibility for external installations
- Dual EVSE pedestal option allows for multiple vehicle charging
- Customization available

Power Xpert Solar 250 kW Inverter

Product Description

The Eaton Power Xpert Solar 250 kW Inverter incorporates Eaton’s programmable logic controllers (PLCs), advanced variable frequency drives and protective relays. Every critical component inside the Power Xpert Solar 250 kW Inverter is proven to be reliable based on the known life cycles of high volume industrial and electrical control equipment.

Engineered for ease-of-installation, operation, and maintenance, the Power Xpert Solar 250 kW Inverter contains the intelligence to automate the commissioning, operation, and shut down procedures with minimal physical action. These robust utility-interactive three-phase inverters are based on Eaton’s mature motor-drive assembly featuring Eaton’s Active Front End® (AFE) control technology.

The Power Xpert Solar 250 kW inverter is designed specifically for 480 Vac three-phase utility (grid) applications and 600 Vdc (open circuit) PV systems. It is an excellent choice for either indoor or outdoor installations from a company known for its state-of-the-art electrical products and industry support.

- CEC 96% efficiency
- >99% MPPT efficiency—3rd Party verified
- Earliest startup—latest shutdown with DC excitation and zero load grid sync
- Minimized offline nuisance events with superior fault tolerance of a utility grade electric protection relay

Features and Benefits

Dual-Stage 250 kW inverter with hysteresis, 2 x 125 kW design, provides optimum efficiency in lower irradiance conditions. Offers less stressful power-stage operation for improved inverter longevity. Seamless dual-inverter operation.

Grid Sensor based vector control ensures precise synchronism and fast response to grid dynamics, ensuring a stable operation and an improved solar energy harvesting.

Advanced Proportional Integral Derivative (PID) control enables precise synchronization to the grid, finer current and power limits. Improved temperature limits, better reactive power or power factor control.

DC excitation algorithm and system control Smart PV energy utilization over wasteful utility-based methods of energizing the transformer. Faster morning “wake-up” and power export. Faster mid-day re-connect improves energy harvesting during utility anomalies and outages, minimal-stress “zero-crossing” grid connection process, less part-count for improved solar-system reliability.

Large DC bus capacitors smart, extremely low ripple-current on the PV array makes for a better, trouble-free solar-module operation. Reduced stress on solar modules and wiring control algorithm ensures lower stress on isolation transformer over adverse environmental conditions.

Inverter re-combiner box with DC circuit breaker option available:

- Optional inverter re-combiner box with DC breakers to meet NEC® 2011 requirements for safe DC disconnect, eliminating the need for external DC disconnects
- DC breaker option eliminates the need to replace DC fuses, allowing cost and time savings (lowering O&M costs)
- Current sensing of each DC input is available for array zone monitoring; DC input current is reported to inverter controller, which makes it available via Modbus®

- DC breakers can be individually turned off, allowing isolation of a defective sub-array while allowing other sub-arrays to operate. This feature enhances de-bugging procedures and maximizes fault-tolerance
- DC breakers are available on different configurations and ampacity (90A DC, 100A DC, 125A DC, 150A DC, 175A DC, 200A DC and 225A DC)

Inverter grounding bus

on DC and AC sides allows installation as per NEC 690.47 (C) (1), (2), or (3), should the facility POCC have a bonded equipment-ground to the facility's grounding electrode system.

Maximum power point:

Fast (mSec based) response time with variable step-size control reacts to sudden changes, improved current response for low-irradiance periods, sudden-onset shading and grid outages, superior solar-energy harvesting

Isolation-transformer-based solar inverter which operates with all photovoltaic modules (technologies), negative and positive grounded PV systems.

Eaton Logic Controller (ELC) watch-dog system

that ensures greater system integration and information response for display and stored performance data. It Isolates controls from external interference (anti-hacking)

Rich standard features and options list

- Full-load DC switch disconnect and AC breaker, lockout/tagout compatible
- Lockable display and controls door with window sealed against the elements
- Configurable utility connection
 - Three-wire delta (A/B/C), no neutral required
 - Four-wire wye (A/B/C/N), N-sensing only
- 100 kA surge protection
- 200 kAIC AC breaker
- Large DC and AC conductor gland plates on bottom and immediate sides
- Color, menu-driven display
- Indicator lights (LEDs) and selection switch
- Remote, field-duplicable up-fits
 - Remote indicators (LEDs)
 - Remote OFF (shutdown)
- AC view-window for visible blade disconnect
- Infrared inspection ports for DC and AC cabinets
- CEC approved 2% PBI power meter
- Internal heater for humidity and cold temperature control
- Multiple DC input (combiner) with fuse and breaker options
- SunSpec Alliance compatible monitoring (gateway)

Two-cabinet design Inverter and isolation transformer

that enables integration into electrical rooms, provides better package for roof-top installations, is easier to receive, lift, transport and secure, design category(s) seismic complaint, terminated transformer cables included.

Easy maintenance by Eaton's Electrical Services & Systems (EESS)

- No ladder required to service cooling-system air filters; ground-level access
- Three-door design ensures wide opening for limited-access locations
- Country and worldwide local services

Commissioning support

through country and worldwide local services.

Remote monitoring interface

support via Modbus/TCP with an RJ 45 plug, and a terminal block supplying additional I/O and a 120 Vac power supply for compatibility with third party monitoring applications.

Advanced anti-islanding function, which prevents the operation of the inverter in the event of a utility outage.

AC overcurrent protection and safety inverter

is equipped with a 200 kAIC AC breaker that is operable from the outside of the unit via lockout/tagout-capable handle.

No need for AC fuse replacements, minimizing O&M costs.

Inverter doors are fitted with mechanical interlocks that will safely shut down the inverter if doors are opened.

Human Machine Interface (HMI):

A color touch screen LCD display that represents the status screens during normal operation and additional screens with password protection for access to configuration, troubleshooting, and service.

Standards and Certifications

- UL® 1741 2nd Edition January 2010
- IEEE® 1547
- NFPA 70, National Electrical Code® (NEC)
- CEC Listed (California Energy Commission)
- Seismic qualified to IBC/CBC

Power Xpert Solar 1500/1670 kW Inverter

Product Description

The Power Xpert® Solar MW scale inverter is a rugged, robust and reliable solar inverter designed with Eaton engineering’s 100-year tradition of safety and reliability. Designed for utility applications the Power Xpert Solar 1500/1670 is the world’s largest PV inverter and sets the new standard in reliability and performance.

The inverter is outdoor-rated, and no extra shelter (canopy) or environmental protection is needed in order for the equipment to sustain operation in harsh environments (rain, dust, snow and sun). This makes the Power Xpert Solar inverter not only an economical and cost-effective solution but capable of rapid deployment and installation.

Availability is optimized by a complete fault tolerant design. This inverter is composed by three blocks of 500 kW (555 kW), which can be individually isolated in the unlikely event of a fault, allowing the inverter to operate at partial power until field service arrives on site. This provides for higher reliability and availability than using multiple smaller inverters.

The Power Xpert Solar inverter provides the most cost-effective solution in the market for the following reasons:

- Fully outdoor rated enclosure—no extra shelter or environmental protection needed

- Inverter includes:
 - Recombiner box with fuses
 - Load brake rated DC disconnect switches
 - AC circuit breaker for AC disconnection
 - AC and DC surge suppression
 - True MW design— one inverter is needed for 1.5 MW/1.67 MW station providing the lowest cost of installation and operation:
 - Fewer cement pads, less excavation and less cement
 - Reduced field labor for cabling and wiring due to fewer units needed
 - Direct-coupling, throat connection with step-up transformer
- Fault tolerance design— inverter is able to run at partial power (1/3, 2/3 of full power)
- High reliability due to conservatively rated components, film capacitors and liquid cooling
- No active power de-rating for up to ±0.91 power factor support
- SCADA communication via Modbus® TCP

Features and Benefits

- True MW scale inverter allows for maximum cost savings on installation of inverter and transformer. It also enables a skidless solution as there is only one inverter and a simple pad-mount transformer to be installed
- Inverter can be configured as a 1.5 MW or 1.67 MW for maximum output power optimization. Depending on the MPPT range for the array, the inverter output power can be set to 1.5 MW or 1.67 MW
- Power factor support at rated power. The inverter will supply full rate power (1.5 MW or 1.67 MW), and still provide support for up to a ± 0.91 power factor range. This provides cost optimization especially on projects with a power factor support requirement
- Maximum flexibility on grid support. Power Xpert Solar grid and frequency ride through settings are flexible and can be changed to meet local utility or special grid requirements
- Maximum DC/AC ratio (array I_{sc}): Maximum array short-circuit current (I_{sc}) cannot be higher than 4480 ADC. As long as this limit is maintained, the inverter warranty will not be voided
- The inverter voltage and frequency disturbance characteristics are set and controlled by a widely accepted protection relay SEL-751A. This device is well known by utilities and enables one extra protection layer for safe inverter shutdown under abnormal grid conditions
- Direct-coupling throat connection between the inverter and transformer enables cost savings on cables, conduits and pad installation. The throat connection has been implemented using Eaton's vast experience on low voltage switchgear with connection to a step-up transformer
- DC grounding configuration is available as positive and negative schemes
- A recombiner box with maximum flexibility is available. The standard configurations for number of DC inputs, DC fuse current and cable size are shown in the Catalog Number Selection graphic on **Page V15-T2-10**. The DC fuse ratings available are 160 A, 200 A, 250 A, 315 A, 350 A, 355 A and 400 A
- Array Zone monitoring is possible with the option of current sensing on each DC input. This option allows current monitoring of the ungrounded DC polarity inputs. Each DC input current measurement is stored on the internal inverter controller and available to a plant monitoring device via Modbus TCP
- Fiber optics communication connection is available for large plants, where inverter stations are placed at a far distance from the plant central controller or monitoring device
- Optional auxiliary I/O ports provide an effective way of cost-savings when external devices need to be monitored, such as step-up transformer measurements (liquid temperature, pressure and level). The standard offering is 6 digital inputs and 1 analog input. Other options are available, please consult factory
- A revenue grade meter in the low voltage side of the step-up transformer is also present as an option. Please consult an Eaton representative for further information

Standards and Certifications

- The 1500 kW and 1670 kW inverters are certified by Intertek per UL® 1741

600 Vdc Single-Pole Disconnects

Product Description

Eaton’s offering of PV switches have multiple poles factory-wired, and they are approved for NEC Article 690 applications right from the box. Other manufacturers require the contractor to add jumpers to a two- or three-pole switch, add a neutral, and add labels to meet this requirement. For fusible switches, the Eaton PV single-pole switch requires only one fuse per switch—saving the customer at least one fuse on each switch.

Application Description

When photovoltaic panels convert the sun’s energy into electricity, the power generated is direct current (DC). Typically, the systems are designed with DC system voltages in the 400–600V range. This is much higher voltage than typically found in building systems. The higher voltage, when combined with the lack of a current sine wave with zero crossings, creates a number of challenges in wiring, particularly when switching circuits on and off.

DC circuits consist of two wires—a positive and a negative. In most PV systems, one of these wires is grounded (like a neutral in an AC system). Which of the two wires is grounded is specified by the solar panel manufacturer. The more common application is a negative ground, and the location of this bond is usually found at the inverter. Per the National Electrical Code (NEC) Section 690.5(A), only the current-carrying ungrounded conductor should be switched. Thus, in a negative-grounded system, only the positive wire is switched.

Unlike AC systems that possess a current sine wave with zero crossings, the interruption of higher voltage DC circuits requires an increased air gap to safely and quickly interrupt and break the arc. Within this family of switches, the increased gap is accomplished by wiring multiple poles of a single switch in series for safe arc interruption. The UL 98 listing of these products does not permit multiple circuits to be switched by one switch.

2.3

DC Disconnects

600 Vdc Single-Pole Disconnects

2

Features

Standard Features

- All switches are single-pole and suitable for switching one circuit
- Clear polycarbonate deadfront to guard against accidental contact with live parts
- NEC 690.17-compliant labeling warning that the switch terminals may be energized in the open position
- NEC 690.14.(C) 2 required "PV System Disconnect" label included
- Isolated ground terminals (neutral) for grounded conductors
- Ground lug for equipment grounding conductor
- NEMA 3R, 12 and 4X stainless enclosures
- Fusible and non-fusible configurations—Class R fuse clips standard
- Fuse clips are located on the center pole to ensure that both fuse clips are de-energized—meets NEC Article 690.16, which requires isolation of the fuse from all potential supply sources
- Available for Flex Center modifications (windows, pilot lights, 316 grade stainless, and so on)

Standards and Certifications

- UL 98 listed
- Marked as suitable for NEC 690 PV applications up to 600 Vdc
- OSHPD Special Seismic Certification Preapproval (OSP)

600 Vdc Per Pole and 1000 Vdc Disconnects

Product Description

The latest addition to Eaton's solar disconnect family of products is the UL Listed 600 Vdc per pole, bi-directional disconnect. Listed to the UL 98B standard, this design has the capacity to switch multiple circuits of up to 600 Vdc each. Also included in the line are 1000 Vdc disconnects, designed for use in large scale projects where the higher voltage helps drive improved efficiencies.

The use of renewable energy sources is on the rise. Photovoltaic (PV) systems are among the fastest growing of the new green technologies, and they are being installed on a variety of building types and landscapes throughout North America. This results in a growing need for products to meet the requirements of these systems. Eaton's lineup of 600 Vdc per pole and 1000 Vdc switches are tested and listed to the rigorous UL 98B standard, in line with NEC 690 Code requirements for PV installations.

Application Description

Switching devices primarily designed for DC service require design features to increase the total arcing voltage. This can be achieved by designing larger single air gaps and multiple gaps in series, or by using magnetic fields to force arc movement. In this safety switch design, Eaton uses magnetic fields, created with the use of permanent magnets, to stretch the arc. These products are not polarity sensitive, so they can be used on either negative or positive grounded systems, and they provide protection regardless of whether the current flow is in the "normal" direction or is reversed (possible due to miswiring or under a fault condition).

Note: Photos shown above—
Left: 60A, 3 circuit, 600 Vdc per pole, NEMA 3R.
Right: 200A, 4 circuit, 600 Vdc per pole, NEMA 4, w/ isolated grounded return terminals.

Grounded PV systems

A large number of PV systems in North America to date are grounded systems. These systems will be either positive grounded or negative grounded. In a positive grounded system, the disconnect will switch (break) the negative (-) conductor only. Conversely, in a negative grounded system, the disconnect will switch (break) the positive (+) conductor only. It is important that the disconnect applied within a grounded PV system be properly rated for that specific system. Eaton's lineup of switches (600 Vdc and 1000 Vdc) are designed and UL Listed for use in both positive and negative grounded applications—one switch can be used on either system.

Ungrounded PV systems

Somewhat less common today are ungrounded (floating) PV systems. These use transformerless inverters and, relative to the disconnects within the system, both the positive (+) and the negative (-) conductors are switched. Eaton is proud to also offer a series of disconnects (600 Vdc and 1000 Vdc) for ungrounded systems.

Safety

The incorporation of the modified heavy duty safety switch mechanism provides a visible means of disconnect when the switch handle is in the OFF position. Blade disengagement from the stationary contact can be seen when viewing the switch base.

Features

Standard Features

- UL Listed to the UL 98B standard
- Marked as suitable for NEC 690 PV applications per UL 1741 requirements
- Suitable for use on positive and negative grounded systems, not polarity sensitive
- Bi-directional functionality; will break high-energy DC arc regardless of direction of current flow
- Ampacity range—30, 60, 100, 200 and 400A
- Clear polycarbonate deadfront shield
- Equipment ground
- NEMA 3R, 4 and 4X stainless steel enclosures
- Flex Center modification available, such as viewing windows, pilot lights and more

600 Vdc Specific Features

- First UL Listed 600 Vdc per pole, bi-directional solution in the market
- 2-, 3-, 4- and 6-circuit configurations for grounded systems
- 1-, 2- and 3-circuit configurations for ungrounded systems
- Fusible and non-fusible
- Grounded configurations include isolated return terminals. Exceptions include 6-circuit 30, 60, 100A, and 4-circuit 400A
- Suitable for use on a circuit capable of delivering up to 10,000A, 600 Vdc

1000 Vdc Specific Features

- 1-, 2- and 3-circuit configurations for both grounded and ungrounded systems
- Fusible and non-fusible
- Factory-installed jumpers
- Grounded configurations include isolated return terminals. Exceptions include 2-circuit 400A
- Suitable for use on a circuit capable of delivering up to 10,000A, 1000 Vdc

Standards and Certifications

Listed to the UL 98B standard in-line with NEC 690 Code requirements for PV installations.

Catalog Number Selection

DC Disconnects

Note

① Not all configurations for ampere rating and number of circuits are available. All circuit configurations can be found in the product dimension tables.

Pow-R-Line C Distribution Switchboards	
Integrated Facility Switchboard	V15-T2-23

Pow-R-Line C Distribution Switchboards

Product Description

Eaton’s Pow-R-Line C distribution switchboards combine a space-saving design with modular construction and increased system ratings to provide economical and dependable electrical system distribution and protection.

Application Description

Whether providing access for solar systems to main distribution systems or combining outputs of multiple inverters, Eaton’s Pow-R-Line C switchboards are available for customization for many applications, including backfeed scenarios.

Refer to Eaton’s *Consulting Application Guide*.

Features, Benefits and Functions

Pow-R-Line C designates a family of distribution switchboards, incorporating design concepts that fit the ever-increasing need for applications on high short-circuit systems, while retaining maximum safety and convenience throughout the line.

- 6000A maximum main bus rating
- 600 Vac and below
- 600 Vdc and below
- Front or rear accessible
- Type 1 or Type 3R enclosures
- ANSI-61 gray powder coat paint finish
- Microprocessor-based metering and monitoring devices
- Utility metering provisions
- Surge protective devices (SPD)
- Ground fault protection on mains and distribution devices
- Busway and transformer connections
- Complete protective device accessory capability
- 65 kAIC bus bracing standard; optional 100 or 200 kAIC
- Standard tin-plated aluminum bus; optional copper- or silver-plated copper bus
 - Standard bus ampacities based on UL heat test ratings. Optional density rated bus systems are also available

Main and Individually Mounted Devices

- Magnum® SB insulated case circuit breakers, 800–5000A, fixed or drawout
- Magnum DS power circuit breakers, 800–5000A, fixed or drawout
- Molded case circuit breakers, 400–2500A, fixed mounted
- Bolted pressure switches, 800–5000A
- FDPW fusible switches, 400–1200A

Group-Mounted Distribution Devices

- Molded case circuit breakers, 15–1200A
- FDPW fusible switches, 30–1200A

Front Accessible

Front-accessible switchboards align at the rear, enabling them to be placed against a wall (Pow-R-Line C front accessible). If the main section is deeper than others, due to physical size of the main device, the necessary off-set in line-up will occur in front, and the main section will be accessible from the side as well as from the front. Standard front accessible switchboards will align at the front and rear.

Rear Accessible

Rear-accessible switchboards align at the front and the rear. Bus maintenance and cable entry and exit require rear access.

Standard Switchboard Height

Standard Pow-R-Line C switchboard height is 90 inches (2286.0 mm).

Group Mounting

Group-mounted circuit protective devices are an assembly of units mounted on a panelboard type base (panelboard construction). Units may be molded case breakers, or FDPW fusible switches. Circuit protective devices are accessible from the front.

A main molded case breaker or main FDPW fusible switch, within the sizes listed for panelboard design, can be included in the panel-mounted assembly in lieu of a separate, individually mounted unit.

Space Only for Future Devices Group-Mounted Construction

Where space only for future circuit protective devices is required, the proper space and a blank filler plate will be supplied. Connections and mounting hardware are not included.

Provision for Future Devices

Where provisions for future circuit protective devices are required, space for the device, corresponding vertical bus, device connectors and the necessary mounting hardware will be supplied.

Busbar System

Standard bus in the switchboards is tin-plated aluminum. Silver-plated copper and tin-plated copper are also available.

Main bus and sub-main buses meet UL and NEMA standards for temperature rise on all Pow-R-Line C switchboards. Special bus densities are available.

Overcurrent Devices

To properly select and size overcurrent devices for use in a switchboard, the allowable temperature rise must be taken into account as to its effect on the tripping characteristics of the devices in question.

Accordingly, Article 220 of the NEC requires overcurrent devices to be rated not less than 125% of the continuous load they are protecting. To comply with this, an 80% derating factor must be used with all overcurrent devices such as molded case breakers and FDPW fusible switches unless they are tested and marked as 100% rated devices.

Short-Circuit Rating

Standard bus and connectors on all switchboards are rated for use on systems capable of producing up to 65,000A rms symmetrical short-circuit current at the incoming terminals.

Increased bus short-circuit ratings equal to that of connected switchboard devices, up to 200,000A rms symmetrical, are available in most Pow-R-Line C switchboards when approved main devices are installed. Contact Eaton for more information. UL labeled switchboard sections are marked with their applicable short-circuit rating.

Provision for Busway Entrance and Exit

Busway connections to switchboard sections include cutout and drilling in the top of the switchboard with riser connections from the switchboard device or bus, up to the point where the bus duct enters the switchboard. No connections are furnished external to the switchboard.

Note: In all transactions involving busway attached to switchboards, it is essential that information regarding orientation of the busway with respect to the front of the switchboard be supplied to the coordinating assembly plant.

On Pow-R-Line C switchboards, solid busbar is used to connect the bus duct to the individually mounted main device, main or sub-main switchboard bus, or vertical main bus of panel mounted circuit protective device panels. Busway fed by group-mounted branch devices are cable connected.

Aluminum riser connections are standard. Copper- or silver-plated copper is available as a modification.

Transitions

Transition structures are required for connecting switchboards to the secondary of power center transformer (dry or liquid filled), motor control centers, and for other special switchboard configurations such as “L” or “U” shaped lineups. In some applications, an extra structure complete with connections is required; in others, where switchboard depth and space permit, only the connection conductors are required. Refer to factory for these applications.

Standards and Certifications

- Meets NEMA Standard PB-2 and UL 891
- Seismically qualified

**Product Selection**

For complete application and pricing information, contact your local Eaton sales office.

Technical Data and Specifications**Service**

- 120/240V, single-phase, three-wire
- 240/120V, 208Y/120V, 415Y/240V, 480Y/277V or 600Y/347V three-phase, four-wire
- 600 Vdc

Main Bus Rating

- 400–5000A

Service Section

- Main circuit breaker, 400–5000A
- Main fusible switch, 400–5000A
- Main lugs only, 400–6000A

Metering Sections

- Tenant main disconnects and meter sockets (200A maximum self-contained metered circuits)
- Hot sequence metering circuits
- Cold sequence metering circuits (WCMS only)
- Optional rear barriered wireways or load side pull sections for cable exit requirements
- Sections for metered circuits larger than 200A available with 400A continuous rated self-contained sockets or with CT compartment and transformer rated socket in combination with disconnect

Integrated Facility Switchboard

Product Description

Eaton’s Integrated Facility Switchboards use the modular Pow-R-Line C group-mounted switchboard design to integrate traditionally separate electrical distribution and control equipment into a single space-saving factory assembled and connected package.

The service entrance equipment can be integrated with multiple lighting and appliance branch panelboards into a compact front-accessible group-mounted switchboard. Where multiple panelboards are used in the same electrical room as a conventional distribution switchboard or power panelboards, the integrated design will significantly reduce equipment space requirements, as well as reduce installation time and cost.

Other associated equipment can also be integrated into the assembly, including dry-type distribution transformers, time clock space, lighting control, electronic controls, surge protective devices, metering and energy monitoring devices. Depending upon the application, other user-defined equipment such as a subsystem control package may also be incorporated.

Application Description

Eaton’s Integrated Facility Switchboards are designed to meet specific needs for:

- Solar/alternative energy integration projects
- Retail chain stores
- Commercial offices
- High rise buildings
- Correctional facilities
- Agricultural facilities
- Industrial facilities
- Hospitals/health care facilities
- Educational facilities

Whether the application is a multi-site prototype or single application, integrated switchboards offer time and space-saving features.

For complete application description, refer to Eaton’s *Consulting Application Guide*.

Features, Benefits and Functions

Front Accessible

Integrated Facility Switchboards are front accessible and align at the rear, enabling them to be placed against a wall. Most switchboards align at the front and the rear. If the main section is deeper than others, due to physical size of the main device, the necessary off-set in line-up will occur in front, and the main section will be accessible from the side as well as from the front.

Standard Switchboard Height

Switchboard height is 90 inches (2286.0 mm).

A limited offering of 78-inch (1981.2 mm) high equipment is available. Consult the factory for specific applications.

Switchboard Shipping Splits

The sections can be shipped as specified by the customer to meet specific requirements.

For retrofit applications, single-piece switchboard structures can be shipped to facilitate movement through limited access doorways, etc.

Factory Interconnections

Most sub-panels are fed from the main distribution panel feeder circuit breakers using copper cable sized per the NEC and UL.

Space Savings

The space-saving switchboard installation provides additional usable floor space. For example:

- Retail stores—floor space for sales
- Offices—additional storage, cubicle
- Health care—additional work area
- Retrofits—ability to fit existing rooms

Site Construction Savings

Timely installation of the electrical system typically is a key element on the critical path for any project.

Along with the time to install the equipment, other expenses include the time to handle all of the loose pieces of equipment arriving on a job site and ensuring it reaches the proper trades person. With Eaton's Integrated Facility Switchboards, one piece of equipment is typically shipped to a job site virtually eliminating these issues.

The equipment may also be used for temporary power on job sites, further reducing construction expenses and times.

Standards and Certifications

- Meets NEMA Standard PB-2 and UL 891
- Panelboards mounted inside the sections meet NEMA PB-1 and UL 67
- Other equipment is UL listed as applicable and appropriate

Product Selection

For complete application and pricing information, contact your local Eaton sales office.

Additional Information

Product Description

Eaton’s EZ Box™ and EZ Trim™ represents the first significant change in panelboard box and trim designs in more than a half-century. The EZ Box and EZ Trim have been designed for faster, more secure and safer installations. The new EZ Box and EZ Trim are provided standard for Eaton’s Pow-R-Line 1a and Pow-R-Line 2a lighting panelboards, as well as the Pow-R-Line 3a and Pow-R-Line 3E mid-range panelboard.

Flange Detail

Features

- Virtually eliminates sharp edges
- Trim installs in seconds rather than minutes
- Door-in-door is standard
- Ability to adjust flush box to wall irregularities
- Trim installs without the need for tools
- No exposed hardware (because there is none)

The EZ Box flanges are bent and painted, which virtually eliminates the sharp edges associated with traditional boxes. Additionally, all steel panelboard chassis parts are painted. This significantly reduces potential injury for material handlers and installers. Each flange is adjustable outward up to 3/4-inch (19.1 mm). This feature allows the installer to adjust flush box applications to be level and flat with the finished wall after the wall material is installed to help correct wall irregularities. The new box flange also provides the means for attaching the EZ Trim.

Standalone Trim and Bottom Flange Hanger with Notch

Corner Flange Detail

Fast Installation

The EZ Trim incorporates a groundbreaking design that installs in seconds, rather than minutes. The standard trim features include door-in-door construction; no exposed hardware and no tools are required for installation.

Trim Hanger Inserted Into Box Flange

The balance of the hangers are aligned with the other flange openings and pushed in. When all hangers are in the box flange, the trim is lifted up slightly to clear the notch on the bottom hanger, and the trim is self-supported on the EZ Box.

The installation is completed by swinging the trim to the closed position, then lifting and pushing slightly to the right. The trim will drop into place totally secured. The multi-point catches on the left side of the trim will lock into the left side box flange openings.

Each EZ Trim includes hangers attached on the right side. The bottom trim hanger has a notch in its base. To install, the bottom hanger is inserted into the bottom right side box flange opening, resting the notch on the flange.

To prevent the trim from being removed by non-authorized persons, a unique sliding means automatically latches in place when the trim door is closed. Along with a new lock, the EZ Trim offers a high degree of door security.

Standards and Certifications

When used with Eaton's panelboard chassis, EZ Boxes and EZ Trims meet the following applicable industry standards:

- UL 50 listed
- NEMA Standard PB1
- Federal specifications
- National Electrical Code

Product Description

Distribution Panelboards

Eaton's assembled panelboards are designed for sequence phase connection of branch circuit devices. This allows complete flexibility of circuit arrangement (single-, two- or three-pole) to allow balance of the electrical load on each phase.

Sturdy, rigid chassis assembly ensures accurate alignment of interior with panel front; prevents flexing and minimizes possibility of loosening or damage to current carrying parts during and after installation.

Four-point in-and-out adjustment of panel interior is provided to meet critical depth dimensions on flush installations. This compensates for possible misalignment of box at installation.

Main lugs are mechanical solderless type and approved for copper or aluminum conductors.

Enclosures

Boxes are code-gauge galvanized steel, which include a painted box finished in ANSI-61 light gray to match the trim.

Standard panelboard cabinets are designed for indoor use. Alternate types are available for indoor and special purpose applications.

All enclosures are furnished in accordance with Underwriters Laboratories standards and include wiring gutters with proper wire bending space. Special cabinets can be provided at an additional charge.

The box dimensions shown are inside dimensions. For outside dimensions, add 1/4-inch (6.4 mm).

Standard panelboard boxes are supplied without knockouts (blank endwalls).

Fronts

Fronts (trims) for all panelboards are made of code-gauge steel and have a high durability ANSI-61 light gray finish applied by a baked-on polyester powder coating paint system.

The fronts for lighting and appliance branch circuit panelboards and small power distribution panelboards include a door with rounded corners and concealed hinges. A flush-type latch and lock assembly is included. All locks are keyed alike. These trims are available in both surface- and flush-mounted designs.

EZ Trim Features Standard Door-in-Door with No Exposed Hardware or Sharp Edges (no Tools are Required for Installation)

The Three-Piece Trim for Larger Power Distribution Panelboards Provides for Easy Handling and Installation

Fronts for power distribution panelboards utilize a unique breaker front cover design in which each device has a dedicated bolt-on steel cover. The individual covers form a single deadfront for the panelboard that is used in conjunction with two wiring gutter covers to complete the trim. A door is not finished as part of the standard offering on these panelboards but can be provided, for an additional charge, using a deeper than standard box.

Application Description

Whether providing access for solar systems to inverter inputs or combining outputs from multiple inverters, Eaton's Pow-R-Line C panelboards are available for customization for any application, including backfeed scenarios.

Panelboard Selection Factors

In selecting a panelboard, the following factors must be considered:

- Service (voltage and frequency)
- Interrupting capacity (fully or series rated)
- Ampere rating of main
- Ampere ratings of branches
- Environment

Panelboard Short-Circuit Rating

The short-circuit rating of Eaton's assembled panelboards are test verified by, and listed with, Underwriters Laboratories (UL). Generally, these ratings are that of the lowest interrupting rated device in the panel.

Service Entrance Equipment

The National Electrical Code (NEC) requires that:

- A panel used as service entrance equipment must be located near the point where the supply conductors enter the building
- A panelboard having main lugs only shall have a maximum of six service disconnects to de-energize the entire panelboard from the supply conductors. Where more than six disconnects are required, a main service disconnect must be provided
- A disconnectable electrical bond must be provided between the neutral and ground
- A service entrance type UL label must be factory installed
- Ground fault protection of equipment shall be provided for each service disconnect rated 1000A or more if the electrical service is a solidly grounded wye system of more than 150V to ground, but not exceeding 600V phase-to-phase

Note: Service entrance panels must be identified as such on the order.

Panelboard Standards

In 2008, both the National Electrical Code (Article 408) and UL 67 were updated to remove the mandated 42-circuit limitation. Eaton offers panelboards with more than 42 circuits for those jurisdictions that have adopted the 2008 NEC or later.

For jurisdictions that have not adopted the 2008 or later version of the National Electrical Code, the 42-circuit limitation for Lighting and Appliance Branch Panelboards remains in place. Check with your local code officials to determine specific jurisdiction status.

Panelboard Installation

NEC requires that the operating handle of the topmost mounted device be no more than 6 feet 7 inches (2006.6 mm) above the finished floor and should be installed per NEC and manufacturer's instructions.

Additional boxes and fronts are required when the components required for one panelboard exceed the standard box dimensions.

Multi-Section Panelboards

When two or more separate enclosures are required, separate fronts for each box are standard. A common front can be furnished at additional charge.

Interconnecting Multi-Section Panelboards

When a panelboard, for connection to one feeder, must be furnished in more than one section (Box), each section must be furnished with main bus and terminals of the same rating, unless a main overcurrent device is provided in each section.

Sub-feed or through-feed provisions must also be included (and priced) to provide connection capability to the second section.

Note: Sub-feed or through-feed lugs cannot be used on any panelboard that is not protected by a single main overcurrent device either in the panelboard or immediately upstream, i.e., service entrance panelboards with main lugs only using the six disconnect rule.

Sub-Feed Lugs

Sub-feed lugs (see figure below) are one means of interconnecting multi-section panels. The sub-feed (second set of) lugs are mounted directly beside the main lugs. These are required in each section except the last panel in the lineup. The feeder cables are brought into the wiring gutter of the first section and connected to the main lugs. Another set of the same size cables are connected to the sub-feed lugs (Section 1) and are carried over to the main lugs of the adjacent panel. Cross connection cables are not furnished by Eaton. Sub-feed lugs are only available on main lug only panels.

Note: Sub-feed lugs may not be used on main lug only (six disconnect rule) service entrance panels.

Sub-Feed Lugs

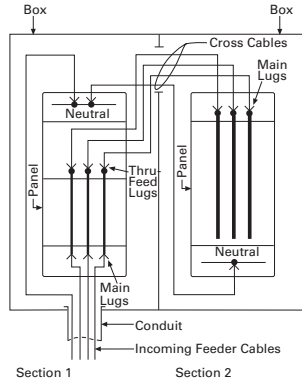

Through-Feed Lugs

Through-feed lugs (see figure below) are another method to interconnect multi-section panelboards. The incoming feeder cables are connected to the main lugs or main breaker at the bottom of panel (Section 1). Another set of lugs (through-feed) are located at the opposite end of the main bus. The interconnecting cables are connected to the through-feed lugs in Section 1 and are carried over to the main lugs in Section 2. The connection arrangement could be reversed, i.e., main lugs at top; through-feed lugs at bottom end of panel. Cross cables are not furnished by Eaton.

Note: Through-feed lugs may not be used on main lug only (six disconnect rule) service entrance panels.

Through-Feed Lugs

Multiple Section Panelboard—Flush Mounted

Shown below is the standard method for flush mounting multiple section lighting and distribution panelboards using standard flush trims.

Multiple Section Panelboard Flush Mounted—Dimensions in Inches (mm)

Overcurrent Protection

The following requirements will be found in the NEC:

Each lighting and appliance branch circuit panelboard shall be individually protected on the supply side by not more than two main circuit breakers or two sets of fuses having a combined rating not greater than that on the panelboard.

Ambient Temperatures

The primary function of an overcurrent device is to protect the conductor and its insulation against overheating. In selecting the size of the devices and conductors, consideration should be given to the ambient temperature surrounding the conductors within and external to the panelboard. Cumulative heating within the panelboard may cause premature operation of the overcurrent protective devices.

Underwriters Laboratories test procedures are based, in part, on 80% loading of panelboard branch circuit devices. The NEC limits the loading of overcurrent devices in panelboards to 80% of rating where in normal operation the load will continue for three hours or more. Further derating may be required, depending on such factors as ambient temperature, duty cycle, frequency or altitude.

Exception: There is one exception to this rule in both UL and NEC. It applies to assemblies and overcurrent devices that have been listed for continuous duty at 100% of its rating.

Special Conditions

Standard panelboards, assembled with standard components, are adequate for most applications. However, special consideration should be given to those required for application under special conditions such as:

- Excessive vibration or shock
- Frequencies above 60 cycles
- Altitudes above 6600 feet (2011.7m)
- Damp environment (possible fungus growth)
- Compliance with federal, state and municipal electrical codes and standards

Seismic Considerations

The Uniform Building Code® and the International Building Code, as well as local and state building codes, place an emphasis on seismic building design requirements. Electrical distribution systems are treated as attachments to the building and therefore, fall into this category.

All Eaton panelboards are seismic qualified at the highest possible level, and have been tested in accordance with ANSI C37.81. This standard quantifies actual earthquake conditions, as well as equipment seismic capability.

Harmonic Currents

Standard panelboard neutrals are rated for 100% of the panelboard current. However, since harmonic currents can cause overheated neutrals, an option is provided for neutrals to be rated at 200% (1200A maximum neutral for 600A main bus) of the panelboard phase current.

Panelboards with the 200% rated neutral are UL listed as suitable for use with non-linear loads.

Prior to specifying the 200% rated neutral, Eaton recommends a harmonic survey be conducted of the distribution system, be it new or existing.

Surge Protective Devices

The quality of power feeding sensitive electronic loads is critical to the reliable operation of any facility. In modern offices, hospitals, and manufacturing facilities, the most frequent causes of microprocessor-based equipment downtime and damage are voltage transients and electrical noise.

Electrical loads and microprocessor-based equipment are highly susceptible to both high and low energy transients. High energy transients include lightning induced surges and power company switching. These high energy transients can destroy components instantly.

More frequently the electrical system experiences low energy transients and high frequency noise.

The effects of continual low energy transients and high frequency noise can cause erratic equipment performance or sudden failure of electronic circuit board components.

Eaton can provide protective and diagnostic systems integral to panelboards. The surge protective device (SPD) is integrated into the panelboards using a “zero lead length” direct busbar connection.

Pow-R-Line 4

The SPD protects sensitive electronic equipment from the damaging effects of high and low energy transients, as well as high frequency noise.

Standards and Certifications

Eaton’s panelboards are designed to meet the following applicable industry standards, except where noted:

- Underwriters Laboratories:
 - Panelboards: UL 67
 - Cabinets and Boxes: UL 50

Note: Only panelboards containing UL listed devices can be UL labeled.

- National Electrical Code
- NEMA Standards: PB 1
- Federal Specification W-P-115c:
 - Circuit Breakers—Type I Class I
 - Fusible Switch—Type II Class I

Terminal Wire Ranges, Pressure-Type Al/Cu Terminals Except as Noted

Note: All terminal sizes are based on wire ampacities corresponding to those shown in NEC Table 310.16 under the 75°C insulation columns (75°C wire). The use of smaller size, (in circular mills), regardless of insulation temperature rating, is not permitted.

Where copper-aluminum terminals are supplied on designated panelboard types, best results are obtained if a suitable joint compound is applied when aluminum conductors are used.

Check Eaton's standard terminal sizes versus customer requirements. In particular, 400 and 800A breakers often require nonstandard lugs.

Optional 750 kcmil mechanical screw-type terminals are available upon request. Panelboard dimensions may be affected, refer to Eaton.

Notes

- ① DC ratings apply to substantially non-inductive circuits.
- ② Two- and three-pole HACR rated.
- ③ 100% rated circuit breaker.
- ④ DC rating not available with electronic trip.
- ⑤ Available with integral ground fault protection.
- ⑥ 100k based on NEMA test procedure.

Product Description

- 240 Vac maximum
- Three-phase four-wire, three-phase three-wire, single-phase three-wire, single-phase two-wire
- 400A maximum mains
- 100A maximum branch breakers
- Bolt-on or plug-on branch breakers
- Each branch connector is capable of up to a total of 140A maximum by breaker ampere rating
- Factory assembled
- Refer to **Page V15-T2-29** for additional information

Application Description

- Lighting branch panelboard
- Fully rated or series rated
- Interrupting ratings up to 200 kA symmetrical
- Suitable for use as Service Entrance Equipment, when specified on the order
- See **Pages V15-T2-29** through **V15-T2-36** for additional information

Standards and Certifications

- UL 67, UL 50

Notes

- ① Single-pole breakers are rated 120 Vac maximum.
- ② 50A devices are available as two-pole only.
- ③ GFCI for 5 mA personnel protection.
- ④ GFP for 30 mA equipment protection.
- ⑤ Arc fault circuit breaker.
- ⑥ HID (High Intensity Discharge) rated breaker.
- ⑦ Switching Neutral Breaker. single-pole device requires two-pole space, two-pole device requires three-pole space.
- ⑧ Solenoid operated breaker.

Box Sizing and Selection

Approximate Dimensions in Inches (mm)

Assembled Circuit Breaker Panelboards and Lighting Controls

Box size and box and trim catalog numbers for all standard panelboard types are found on **Page V15-T2-40**.

Instructions

1. Using description of the required panelboard, select the rating and type of main required.
2. Count the total number of branch circuit poles, including provisions, required in the panelboard. Do not count main breaker poles. Convert two- or three-pole branch breaker to single-poles, i.e., three-pole breaker, count as three poles.
3. Determine sub-feed breaker or through-feed lug requirements.
3. Select the main ampere rating section from table on **Page V15-T2-40**.
4. Select panelboard type from first column, main breaker frame, if applicable, from second column, and sub-feed breaker frame, if applicable, from the third column.
5. From Step #2, determine the number of branch circuits in Column 4.
6. Read box size, box and trim catalog numbers across columns to the right. Specify surface or flush mounting on the order.

Cabinets

Fronts are code-gauge steel, ANSI-61 light gray painted finish.

Boxes are code-gauge galvanized steel without knockouts. Standard depth is 5-3/4 inches (146.1 mm). Standard width is 20 inches (508.0 mm). An optional 28-inch (711.2 mm) wide box is available.

Top and Bottom Gutters

5-1/2 inches (139.7 mm) minimum.

Type PRL3a

Product Description

- 600 Vac maximum (250 Vdc)
- Three-phase four-wire, three-phase three-wire, single-phase three-wire, single-phase two-wire
- 800A maximum main lugs
- 600A maximum main breaker
- 225A maximum branch breakers
- Bolt-on branch breakers
- Factory assembled
- Refer to **Page V15-T2-29** for additional information

Application Description

- Lighting panelboard or power distribution panelboard
- Fully rated or series rated
- Interrupting ratings up to 200 kA symmetrical
- Suitable for use as Service Entrance Equipment, when specified on the order
- See **Pages V15-T2-29** through **V15-T2-36** for additional information

Standards and Certifications

- UL 67, UL 50
- Federal Specification W-P-115c

Notes

- ① 800A MLO requires 28-inch (711.2 mm) wide box.
- ② 100,000 based on NEMA test procedure.
- ③ Top feed only.
- ④ Requires 6.50-inch (165.1 mm) deep box. Not available in Type 3R, 12, 4 and 4X enclosures.
- ⑤ 100% rated circuit breaker. Requires copper bus. Not available in Type 12, 4 and 4X enclosures.

Notes

- ⁽¹⁾ 50A devices are available as two-pole only.
- ⁽²⁾ Single-pole breaker rated 120 Vac.
- ⁽³⁾ Two-pole breaker rated 120/240 Vac.
- ⁽⁴⁾ Arc fault circuit breaker.
- ⁽⁵⁾ HID (High Intensity Discharge) rated breaker.
- ⁽⁶⁾ Switching Neutral Breaker. single-pole device requires two-pole space, two-pole device requires three-pole space.
- ⁽⁷⁾ Solenoid operated breaker.
- ⁽⁸⁾ Single-pole breaker rated 277 Vac.
- ⁽⁹⁾ For use on 480Y/277V systems only.
- ⁽¹⁰⁾ AIC rating for two- and three-pole breakers only.
- ⁽¹¹⁾ Maximum of six breakers per panel, 175–225A.

Pow-R-Line C Panelboards

Box Sizing and Selection

Approximate Dimensions in Inches (mm)

2

Panel Layout Instructions

- Select:
 - Required mains (lugs or breaker).
 - Neutral where required.
 - Branch circuits as required.
- Layout panel as shown below, using appropriate “X” dimensions.
- Using total X units (panel height) find box height in inches (mm) and box catalog number from table below. (When total X units come out to an uneven number, use next highest number; i.e., if total X comes out 25X, use 31X.)

Layout—PRL3a

		Poles	
		6 - 3X	BAB, QBHW, QBCAF,
		12 - 5X	BABRP, BABRSP, QBHCAF
		18 - 8X	GHQ, GHB, HGHB
		24 - 10X	①
		30 - 13X	
		36 - 15X	
	42 - 18X		
	1-Pole	1X	EDB, EDS, ED, EDH, EDC,
	2-Pole	2-Pole	EHD, FDB, FD, FDE, HFD, FDC, HFDE
	1-Pole	3-pole	150A max. per branch breaker (300A max. per connector)
	2-Pole	2X	
	1-Pole	3-pole	
	2-Pole	3-pole	
	2- or 3-pole	2X	EDB, EDS, ED, EDH, EDC
		2-Pole	FD, HFD, FDC, ② FDE, HFDE
		3X three-pole	
Neutral Section		5X	100–250A
		8X	400–800A
		11X	800A with through-feed lug
Main Lug Section		2X	100A
		5X	250A
		8X	400–600A
		14X	800A
Main Breaker Section	Horizontal Mounting	2X	EHD, FDB, FD, HFD, FDC, FDE, HFDE
		2-Pole	
		3X three-pole	EDB, EDS, ED, EDH, EDC ③
	Vertical Mounting	7X	EHD, FDB, FD, FDE, HFD, FDC, HFDE, EDB, EDS, ED, EDH, EDC ④
		9X	FCL, FB-P ⑤
		14X	JD, HJD, JDC
		15X	DK, KD, HKD, KDC, LHH
		17X	LD, HLD, LDC, CLD, CHLD, CLDC
		18X	LGE, LGH, LGC
		21X	LCL, LA-P ⑥

Notes

- GHB, HGHB and GHQ breakers cannot be mixed on same connector as BAB, QBHW, BABRP and BABRSP.
- Maximum of six breakers per panel.
- Horizontal mounted 15–150A main breakers EHD, FDB, FD, FDE, HFD, HFDE and FDC, will be furnished as branch breaker construction. Branch breakers single-, two- or three-pole as required, may be located opposite these main breakers.
- If optional terminal kit 3TA225FDK is required, use 10X.
- FB-P and LA-P top mounting only.
- LCL or LA-P main breaker requires 6-1/2-inch (165.1 mm) deep box.

Layout Example

- Description of Panel

Type PRL3a three-phase, four-wire, 120/208 Vac flush mounting. Panel to have short-circuit rating of 22,000 symmetrical amperes. Main breaker 400A, three-pole, bottom mounting. Branch circuits bolt-on as follows:

 - 12–200A single-pole QBHW
 - 1–200A three-pole ED
 - 1–225A three-pole ED
- Layout Information from **Layout—PRL3a** table (left):
 - 400A Neutral. = 8X
 - 12-poles of QBHW = 5X
 - Two three-pole ED breakers . . = 6X
 - Main breaker, 400A, Three-pole DK. = 15X
 - Total Height. = 34X
- From **Box Tabulation—PRL3a** table (below):
 - 34X Height (use 40X box)
 - Box Height 72 inches (1828.8 mm)
 - Box Catalog Number. **YS2072** or **EZB2072R**

Cabinets

Fronts are code-gauge steel, ANSI-61 light gray painted finish.

Boxes are code-gauge galvanized steel without knockouts. Standard depth is 5-3/4 inches (146.1 mm).

Standard widths are:
 20-inch (508.0 mm)
 100–600A.
 28-inch (711.2 mm)
 800A.

Standard Depth

5-3/4 inches (146.1 mm).

Top and Bottom Gutters

5-1/2 inches (139.7 mm) minimum.

Side Gutters

4 inches (101.6 mm) minimum.

Notes

- ① For ground fault protection on main devices, see **Modification 14** on Page V15-T2-63 or **Modification 15** on Page V15-T2-63
- ② For use on DC systems only.
- ③ 100% rated breaker. Requires copper bus. Not available in Type 12, 4 and 4X enclosures.
- ④ Breaker only available in three-pole frame.
- ⑤ Requires 44-inch (1117.6 mm) wide box.
- ⑥ For ground fault protection on main devices, see **Modification 15** on Page V15-T2-63.
- ⑦ Fuses not included. **Specify required fuse clips on all switches.**
- ⑧ Class J Fuse provisions are applicable only to 600V units. When required, use dimensions of 600V units for all voltages 600 and below.
- ⑨ No DC rating on 600, 800 and 1200A switches

FDPW and FDPB Switch Ratings, 240 or 600 Vac

Ampere Rating	Fuse Class Used	Short-Circuit Ratings (kA Symmetrical)
30–100	R, J ⑥	200
200 Single	R, J ⑥	200
200 Twin	R ⑥, J ⑥, T	200
400, 600 ⑦	R ⑦, J ⑥, T	200
800, 1200 ⑦	L	200

Notes

- ① 100 kAIC based on NEMA test procedure.
- ② Fuses not included. **Specify required fuse clips on all switches. (T fuse clips not available for 200/200 twin switches.)**
- ③ When branches of a twin unit are of different ampere ratings, as a 30–60 twin unit, price and layout as a 60–60 twin unit; when a 60–100 twin unit, price and layout as a 100–100 twin unit.
- ④ No DC rating on 600, 800 and 1200A switches.
- ⑤ Class J fuse provisions are applicable to 600V units. When required, use price and dimensions of 600V units for all voltages 600V and below.
- ⑥ Twin 200A switches are not available with Class R fuse clips at 600V.
- ⑦ When shunt trip is required, 400–600A switches used with Class R fuses are rated 100 kAIC.

Box Sizing and Selection—PRL4B

Approximate Dimensions in Inches (mm)

Main Lug Only (MLO), Main Breaker, Neutral, Through-Feed Lug (TFL) and Sub-Feed Lug (SFL) "X" Space Requirements. (For other configurations not shown, refer to Eaton.)

* = Space available for branch devices. For device sizing, see **Page V15-T2-55**.

● = Blank means no bus under cover, to meet NEC cable bending space.

PRL4B Layout

Standard Main Lug, Through-Feed and Sub-Feed Lugs (500 kcmil Maximum)

Main Breaker with Neutral (when required) (500 kcmil Maximum)

800A Vertically Mtd. MDL Main Breaker only in 24-inch (609.6 mm) wide box. Available with 38X and 50X Panel Height only.

Optional Main Lugs, Through-Feed and Sub-Feed Lugs (750 kcmil Maximum)

Note

① Sub-feed lugs are available 250–600A. For 600A, use 1200A "A" space.

2.5

Panelboards—Solar Applications

Pow-R-Line C Panelboards

2

Approximate Dimensions in Inches (mm)

Panel Layout and Dimensions

To determine the dimensions of a given panelboard enclosure, make a layout sketch by fitting together the main, branch and lug modules according to the appropriate tables in the layout guide. Assign “X” units to each module as shown and obtain a total “X” number.

The height of the enclosure is related to the total “X” units in the layout as shown in table on right. Three standard box heights are available to accommodate any and all layout arrangements. “X” unit totals that do not exactly match those in table on right must be rounded off to the next highest standard (26X, 38X, 50X).

If a calculated “X” total for a panel exceeds 50X, the panel must be split into two or more separate sections with “X” space for through-feed lugs figured in for all but one section. If a neutral is required, a separate neutral bar and appropriate “X” space must be included in each section.

Layout Example

- 1–PRL4B panelboard, 480Y/277 volt, three-phase four-wire 65 kA, 800A, main lug, consisting of:
 - 12–20A/single-pole HFD
 - 2–250A/three-pole HJD
 - 1–400A/three-pole HKD

Reference PRL4B Layout Example

1. From layout guide, total “X” height of panel = 26X, (which is a design standard and no rounding off is necessary).
2. From table on right, enclosure height for 26X panel = 57 inches (1447.8 mm).
3. Width = 24 inches (609.6 mm)—directly from layout guide.
4. Enclosure depth = 11.31 inches (287.0 mm)—standard for all PRL4 panelboards.

PRL4B Layout Example

20A/1P	20A/1P	1X
20A/1P	20A/1P	1X
20A/1P	20A/1P	1X
20A/1P	20A/1P	1X
20A/1P	20A/1P	1X
20A/1P	20A/1P	1X
20A/1P	20A/1P	1X
250A/3P		3X
250A/3P		3X
400A/3P		4X
Main Lugs	800A	10X
	Neutral	

Total = 26X

Box Dimensions—PRL4B

“X” Units	Catalog Number	Height	Width	Depth ①
26X	BX2457	57.00 (1447.8)	24.00 (609.6)	11.31 (287.0)
38X	BX2473	73.50 (1866.9)	24.00 (609.6)	11.31 (287.0)
50X	BX2490	90.00 (2286.0)	24.00 (609.6)	11.31 (287.0)
38X	BX3673	73.50 (1866.9)	36.00 (914.4)	11.31 (287.0)
50X	BX3690	90.00 (2286.0)	36.00 (914.4)	11.31 (287.0)
38X	BX4473	73.50 (1866.9)	44.00 (1117.6)	11.31 (287.0)
50X	BX4490	90.00 (2286.0)	44.00 (1117.6)	11.31 (287.0)

Top and Bottom Gutters

10.63-inch (269.9 mm) minimum.

Side Gutters—Minimum

24.00-inch (609.6 mm) wide box—5.00-inch (127.0 mm).
 36.00-inch (914.4 mm) wide box—6.00-inch (152.4 mm).
 44.00-inch (1117.6 mm) wide box—8.00-inch (203.2 mm).

Notes

- ① Box depth is 10.40 inches (264.2 mm), cover adds 0.90 inches (22.9 mm) to depth.
 800A maximum bus size in 24.00-inch (609.6 mm) wide box. Flush trims not available on PRL4B panels.

Layout for Branch and Horizontally Mounted Main Devices Layout—PRL4B

Notes

- ① BAB and QBHW breakers with shunt trips require one additional pole space, i.e., single-pole is two-pole size, two-pole is three-pole size, and three-pole is four-pole size.
- ② If panel contains only BAB or QBHW branch breakers, use a PRL1a panelboard.
- ③ GHB, HGHB or GHQ breakers cannot be mixed on same subchassis as BAB, QBHW.
- ④ If panel contains only GHB, HGHB or GHQ branch breakers, use a PRL2a panelboard.
- ⑤ When only one single-pole breaker of the group is required on either side of chassis, the single-pole breaker space required changes from 1X to 2X.
- ⑥ Minimum 36-inch (914.4 mm) wide box is required if optional #6–300 kcmil lug is required.
- ⑦ MDL main breaker in 24-inch (609.6 mm) wide box, refer to **Page V15-T2-53**.
- ⑧ Optional 750 kcmil terminal requires 44-inch (1117.6 mm) wide box.
- ⑨ For use on DC systems only.

See **Page V15-T2-53** for MLO or Neutral and Vertically Mounted Mains space requirements.

Box Sizing and Selection—PRL4F

Approximate Dimensions in Inches (mm)

Main Lug (MLO), Main Switch, Neutral, Through-Feed (TFL) and Sub-Feed Lug (SFL) "X" Space Requirements. (For other configurations not shown, refer to Eaton.)

* = Space available for branch devices. For device sizing, see **Page V15-T2-58**.

● = Blank means no bus under cover, to meet NEC cable bending space.

PRL4F Layout

Standard Main Lug, Through-Feed and Sub-Feed Lugs ① (500 kcmil Maximum)

Main Switch with Neutral (when required) (500 kcmil Maximum)

400A and 600A Vertically Mounted Main Switch

800A and 1200A Vertically Mounted Main Switch ②
36-inch (914.4 mm) or
44-inch (1117.6 mm)
Wide Box

Optional Main Lugs, Through-Feed and Sub-Feed Lugs ① (750 kcmil Maximum)

Notes

① Sub-feed lugs are available 250–600A. For 600A, use 1200A "A" space.

② 800A and 1200A mains available only in vertical mounting.

Approximate Dimensions in Inches (mm)

Panel Layout and Dimensions

To determine the dimensions of a given panelboard enclosure, make a layout sketch by fitting together the main, branch and lug modules according to the appropriate tables in the layout guide. Assign “X” units to each module as shown and obtain a total “X” number.

The height of the enclosure is related to the total “X” units in the layout as shown in table on right. Three standard box heights are available to accommodate any and all layout arrangements. “X” unit totals that do not exactly match those in table on right must be rounded off to the next higher standard (38X, 50X).

If a calculated “X” total for a panel exceeds 50X, the panel must be split into two or more separate sections with “X” space for through-feed lugs figured in for all but one section. If a neutral is required, a separate neutral bar and appropriate “X” space must be included in each section.

Layout Example

- PRL4F, three-phase four-wire, 208Y/120 volt complete with 400A main switch and the following branches:
 - One 200A/three-pole
 - Two 100A/three-pole
 - Two 30A/three-pole

Panel to have short-circuit rating of 100 kA symmetrical.

Reference PRL4F Layout Example

1. From layout guide, total “X” height of panel = 43X.
2. Rounded off to next higher standard = 50X.
3. From table on right, enclosure height for 50X panel = 90 inches (2286.0 mm).
4. Width = 36 inches (914.4 mm).
5. Enclosure depth is standard for all PRL4 panelboards = 11.31 inches (287.0 mm).

Type PRL4F Layout Example

400A Neutral	7X	
30A/3P	30A/3P	4X
100A/3P	100A/3P	4X
200A/3P	6X	
400A three-pole Main Switch (Vertical Mounted)	22X	

Total = 43X

Box Dimensions—PRL4F

“X” Units	Catalog Number	Height	Width	Depth ①
38X	BX3673	73.50 (1866.9)	36.00 (914.4)	11.31 (287.0)
50X	BX3690	90.00 (2286.0)	36.00 (914.4)	11.31 (287.0)
38X	BX4473	73.50 (1866.9)	44.00 (1117.6)	11.31 (287.0)
50X	BX4490	90.00 (2286.0)	44.00 (1117.6)	11.31 (287.0)

Top and Bottom Gutters

10.63 inches (269.9 mm) minimum.

Side Gutters—Minimum

- 36-inch (914.4 mm) wide box:
 - 8-inch (203.2 mm)—200A maximum
 - 6-inch (152.4 mm)—400–1200A maximum
- 44-inch (1117.6 mm) wide box:
 - 10-inch (254.0 mm)—200A maximum
 - 8-inch (203.2 mm)—400–1200A

Notes

- ① Box depth is 10.40-inch (264.2 mm), cover adds 0.90-inch (22.8 mm) to depth. Flush trims not available on PRL4F panels.

1. Ambient Compensating Breakers

For ambient compensating breakers (where available) in lieu of standard breakers, add 10 percent to panelboard branch breaker and to main breaker list prices, if required. (Not UL listed.)

2. Bus Density

Main bus ampere rating is determined by UL listed temperature test. For 750A per square inch aluminum or 1000A per square inch copper, make price addition as follows:

Modification 2

Panel Type	Maximum Amperes
Aluminum—750A per Square Inch	
PRL1a, 2a	100
	225
	400
PRL3a	250
	400
PRL4	400
	800
Copper—1000A per Square Inch	
PRL1a, 2a	100
	225
	400
PRL3a	250
	600
PRL4	400
	1200

3. Special Cabinet (Box) Construction

Modification 3

Modification

Type 1 Enclosure

28-inch (711.2 mm) wide in place of standard 20-inch (508.0 mm) wide PRL1a, PRL2a, PRL3a

Type 2 Enclosure

(Drip-proof with gasketed trim) PRL1a, PRL2a, PRL3a 20-inch (508.0 mm) wide

Type 3R Enclosure

PRL1a, PRL2a 20-inch (508.0 mm) wide

PRL1a, PRL2a 28-inch (711.2 mm) wide

PRL3a ① 20-inch (508 mm) wide (600A maximum)

PRL3a ① 28-inch (711.2 mm) wide (600A maximum)

PRL4 24-inch (609.6 mm) or 36-inch (914.4) wide only

Type 12 Enclosure

PRL1a, PRL2a 20-inch (508.0 mm) wide

PRL1a, PRL2a 28-inch (711.2 mm) wide

PRL3a ① 20-inch (508 mm) wide (600A maximum)

PRL3a ① 28-inch (711.2 mm) wide (600A maximum)

PRL4 24-inch (609.6 mm) or 36-inch (914.4) wide only
Must also add bus density price from Modification 2 for PRL4

Type 4 Enclosure or Type 4X Stainless Steel Enclosure

Refer to Eaton

4. Complete Assembly

Complete assembly of panelboard box, interior and trim prior to shipment when required.

5. Compression Main Lugs—Al/Cu Burndy Range Taking

For other terminal types and box sizes, refer to Eaton.

Modification 5—Compression Lug Data

Main Amperes	Wire Range by Panel Type		
	PRL1a and PRL2a	PRL3a	PRL4
100	(1) #1–1/0 or (1) 2/0–300 kcmil	—	—
125	—	(1) #4–2/0 or (1) 2/0–300 kcmil	—
225	(1) 2/0–300 kcmil or (1) 4/0–500 kcmil	—	—
250	—	(1) 2/0–350 kcmil or (1) 4/0–500 kcmil	(2) 500–750 kcmil
400	(2) 4/0–300 kcmil or (2) 500–750 kcmil	(2) 4/0–300 kcmil or (2) 500–750 kcmil	(2) 500–750 kcmil
600	—	(2) 2/0–500 kcmil or (2) 500–750 kcmil	(2) 500–750 kcmil
800	—	—	(3) 500–750 kcmil
1200	—	—	(4) #2–600 kcmil or (4) 500–750 kcmil

Modification 5—Box Height Additions

Main Amperes	PRL1a, PRL2a	PRL3a without Neutral	PRL3a with Neutral
100	0	0X	0X
225	0	—	—
250	—	2X	5X
400	0	0X	0X
600	—	0X	0X

Maximum size for PRL1a and PRL2a panels:
1–750 kcmil per phase, or 2–500 kcmil per phase.
For PRL4 panels, see layout pages.

6. Concealed Trim Clamps—LT Trim

Modification 6

Description

Add per panel PRL1a, PRL2a, PRL3a

7. Conduit Covers

Fabricated sheet metal to cover open conduits above and/or below standard Type 1 box.

Modification 7

Cover Type

Conduit Enclosing Shield (open back)
PRL1a, PRL2a, PRL3a, PRL4—Refer to Eaton

Conduit Enclosure (solid back)
PRL1a, PRL2a, PRL3a, PRL4—Refer to Eaton

Note

① At 600A, PRL3a requires the addition of density rated copper bus for Type 3R or 12 enclosure.

2.5

Panelboards—Solar Applications

Types PRL1a, 2a, 3a and 4 Modifications

2

8. Copper Lugs

Optional copper mechanical main lugs only. (Includes main incoming neutral lug.)

Modification 8

Main Amperes	Wire Range and Number of Lugs Per Phase
100	(1) #14–1/0
225	(1) #6–250 kcmil
250	(1) #6–250 kcmil
400	(2) #1/0–600 kcmil
600	(2) #1/0–600 kcmil
800	(2) #1/0–600 kcmil
1200	(3) #1/0–600 kcmil

Modification 8—Box Height Additions

Main Amperes	PRL1a, PRL2a	PRL3a without Neutral	PRL3a with Neutral	PRL4
100	0	0X	0X	—
225	0	—	—	—
250	—	0X	0X	0X
400	0	0X	0X	0X
600	—	1X	1X	0X
800	—	—	—	0X
1200	—	—	—	0X

9. Copper Main Bus

Modification 9

Available in PRL1a, PRL2a, PRL3a and PRL4

9a. Silver-Plated Copper Main Bus

Modification 9a

Available in PRL1a, PRL2a, PRL3a and PRL4

9b. Tin-Plated Copper Main Bus (PRL1a, 2a, 3a, Only)

Modification 9b

Panel Type

PRL1a, PRL2a, PRL3a

10. Directory Frame—Metal

Modification 10

Frame Type

Metal frame, plastic cover

11. Trim and Door Modifications—Special Fronts and Doors

Modification 11

Description

Door-in-door, one door over interior and one which exposes gutter. (LT Trim) (PRL1a, PRL2a, PRL3a only)

Common trim for two section panels with boxes bolted together. (LT Trim) (PRL1a, PRL2a, PRL3a only)

Standard flush lock with quarter turn fasteners at top and bottom of trim door (LT Trim) (standard on doors 48-inch (1219.2 mm) high and over). (PRL1a, PRL2a, PRL3a only)

To provide a trim with a lockable door for PRL4 panels (door-in-door is standard with this adder). Includes National lock with standard keying. ^①

Add per panel

12. Fungus Proofing

For fungus proofing external portions of circuit breakers and all non-metallic parts, add 10 percent of total panelboard list price. For fungus proofing fusible switches and all non-metallic parts, add 20 percent of total panelboard list price.

13. Ground Bar

Modification 13

	Description	Bar Type
Panel Type		
PRL1a	Aluminum terminal bar for aluminum or copper cable	Standard, insulated/isolated ^②
PRL2a		
PRL3a	Copper terminal bar for copper cable only	Standard, insulated/isolated ^②
PRL4		
Column Type		
In Pull Box	Aluminum terminal bar for aluminum or copper cable	Standard, insulated/isolated ^②
In Gutter		
	Copper terminal bar for copper cable only	Standard, insulated/isolated ^②

Notes

^① Extra depth box is required. Box will be 12.82-inch (325.6 mm) deep.

^② For PRL1a, 2a, 3a and Column Type panelboards. The insulated/isolated ground bar includes a standard ground bar.

14. Electronic Trip Units

Modification 14—Applies to Digitrip 310 and 310+ Trip Units

Description

K-, L- and M-Frame Circuit Breaker (three-pole only)

Digitrip RMS310 LS

Digitrip RMS310 LSI

Digitrip RMS310 LSG ①

Digitrip RMS310 LSIG ①

N-Frame circuit breaker

Digitrip RMS310 LS

Digitrip RMS310 LSI

Digitrip RMS310 LSG ①

Digitrip RMS310 LSIG ①

Digiview Ammeter for 310+ Trip Unit

15. Zero Sequence Ground Fault Protection

For main devices only (circuit breakers or FDPW switch) in PRL4 assembled panels. Available in 250–1200A panels.

Price includes current monitors, ground bar, static sensor, shunt trip, necessary space, mounting and connecting in panelboards. Price does not include circuit breaker or FDPW switch.

Zero sequence ground fault is available with the following family of main devices:

Modification 15

Main Device

JD, KD, LD, MDL, ND, LCL, LA-P, NB-P
FDPW switches
(400–1200A)

16. Circuit Breaker Handle Lockoff Devices

Modification 16

Breaker Types

Non-Padlockable

BAB, QBHV, GHB, EHD, FDB, FD, ED, EDH, EDC, HQP, QPHW

JD, KD, MDL, ND

Padlockable

EHD, FDB, FD, HFD, FDC, ED, EDH, EDC, GHB, BAB, QBHV, HQP, QPHW, EGB, EGS, EGH

JD, KD, LD, MDL, ND, FDE, HFDE

17. Special Hinges—LT Trim

Piano hinges in lieu of standard hinges.

18. Increased Dimensions (PRL1a, PRL2a and PRL3a Only) Type 1 Enclosure Only

Modification 18

Description

Increased End Gutters

4 inch (101.6 mm) Top or Bottom

7 inch (177.8 mm) Top or Bottom

12 inch (304.8 mm) Top or Bottom

Increased Side Gutters

4 inch (101.6 mm) Left or Right

7 inch (177.8 mm) Left or Right

12 inch (304.8 mm) Left or Right

19. Increased Panel Main Bus Rating (Three-Phase Four-Wire, Single-Phase Three-Wire)

Modification 19

Main Bus Ampere Rating Panel Type

100–225/250 PRL1a, PRL2a, PRL3a

225–400

600 (PRL3a)

250–400 PRL4

400–600

600–800

800–1200

20. Interior and Fronts to Fit Existing Boxes

Refer to Eaton.

21. Special Locks

Modification 21

Description

LT Type Trim

Yale 511S with rosette

Yale 4651S (LL803 Key)

Master keying—above locks or standard lock—per panelboard

Corbin 15767 (Cat. #60 Key)

PRL1a, PRL2a, PRL3a

Tee handle and 3-point catch

PRL1a, PRL2a, PRL3a

COMPX metal lock with standard keying

PRL1a, PRL2a, PRL3a

COMPX metal lock with GE75 keyway

PRL1a, PRL2a, PRL3a, PRL4

EZ Type Trim

Standard Lock, Keyed GE75

Standard Lock, Keyed to Corbin TEU-1

Standard Lock, Keyed to Corbin Cat 60

Standard Lock, Keyed to Corbin WEM1

Notes

① Main breaker only.

PRL4 with door includes National lock with standard keying. See **Modification 11**.

2.5

Panelboards—Solar Applications

Types PRL1a, 2a, 3a and 4 Modifications

2

22. Molded Case Switches (Three-Pole, Two-Pole)

Modification 22

Not UL Listed

Breaker Frame	Maximum Volts	Maximum Amperes
EHD	480	100
FD	600	225
JD	600	250
DK	240	400
KD	600	400
LD	600	600
MDL	600	800
ND	600	1200

23. Nameplates, Engraved

Modification 23

Type

Mastic back and installed by purchaser, per nameplate

Fixed to panel trim with two screws or rivets, per nameplate
PRL1a, PRL2a, PRL3a only

24. Neutral Rated 200%

Modification 24

Main Bus Rating	Neutral Rating
100	225
225	450
250	500
400	800
600	1200

Modification 24—Box Height Additions

Main Bus Rating	Neutral Rating	PRL1a, PRL2a	PRL3a	PRL4
100	225	0	0X	—
225	450	0	—	—
250	500	—	3X	0X
400	800	0	3X	0X
600	1200	—	3X	0X

Note: Dimensions based on mechanical lugs. For compression or copper lugs, refer to Eaton.

For 800 and 1200A PRL4 with 200% neutral, refer to Eaton.

25. Painting and Special Coatings

Standard boxes are code-gauge galvanized sheet steel. Standard trims are code-gauge sheet steel with a rust inhibiting phosphatized coating and finished with ANSI-61.

Modification 25

Description

Painted boxes (ANSI-61)

Painted trims or boxes (other than ANSI-61)

26. Permanent Circuit Numbers

Modification 26

Description

To provide permanently attached Micarta Xcircuit numbers.

27. Remote Control Switches—ASCO 920 (Three-Pole, Two-Pole)

Electrically operated, mechanically held remote control switch directly mounted to panelboard bus for total or split bus switching applications.

(For split bus applications, make price addition from **Modification 30**.)

480 Vac maximum short-circuit rating of panelboard is 22 kAIC maximum.

Includes complete installation in the panelboard with a screw cover over the switch compartment.

Pushbuttons or other control devices are not included. For control circuit modifications, refer to Eaton.

Modification 27—Remote Control Switches (PRL3a Only)

Switch Rating Amperes

30, 60, 75, 100, 150, 200, 225

Modification 27—Remote Control Switch Modifications

Description

Two-wire control relay

Three-wire control relay

Control power transformer

To provide hinged cover in place of standard screw cover

28. Service Entrance

To provide a Service Entrance Label as detailed under the “Service Entrance Equipment” in application considerations. Only panelboards meeting these requirements can be labeled as such. The requirement for a Service Entrance Label must be noted on order entry. Includes neutral disconnect link and Service Entrance Equipment Label. (Ground bar not included—see **Modification 13**.)

Modification 28

Panel Type

PRL1a, PRL2a, PRL3a, PRL4

29. Shunt Trip for Main or Branch Circuit Breaker and FDPW Switches

For tripping device from a remote point. Voltage and frequency must be specified. Wiring to terminal blocks is not included. Standard leads extend 18-inches (457.2 mm) out of device.

Factory-installed 120, 240 or 480 Vac shunt trips are available with UL listing as shown in table below. Underwriters Laboratories listing is not available for shunt trip mounted on molded case switches.

Modification 29

Device

BAB, QBHW

Requires one additional pole space, i.e., single-pole is two-pole size, two-pole is three-pole size and three-pole is four-pole size.

GHB (three-pole only)

All other circuit breakers

FDPW switch (400–1200A)

30. Split Bus or Meter Loop (250A Max., 3Ph 4W, 3Ph 3W, 1Ph 3W, 1Ph 2W)

Panel type PRL3a only. For enclosure size, refer to Eaton.

Modification 30

Main Bus Amperes

100–250

31. Metering Devices (PRL4 Only)

IQ digital metering for incoming service. Devices are installed in chassis mounted compartment with hinged door. Standard CTs (1200A maximum) are included with devices. Requires copper bus at 1200A.

Modification 31

Device	Box Height Addition
IQ 130 with CTs and display	13X
IQ 130 with CTs, no display	13X
IQ 140 with CTs and display	13X
IQ 140 with CTs, no display	13X
IQ 150 with CTs and display	13X
IQ 150 with CTs, no display	13X

PXM 2250 with CTs, no display	13X
PXM 2260 with CTs and display	13X
PXM 2260 with CTs, no display	13X
PXM 2270 with CTs and display	13X
PXM 2270 with CTs, no display	13X

32. Sub-Metering IQ Multi-Point Submeter II (PRL4 Only)

Microprocessor-based breaker-mounted device to monitor power and energy (kW, kWh, kW demand). Device mounts on the load side of three-pole F-, J- and K-Frame feeder breakers. Units are shipped with the interior for field installation. Minimum box width of 36 inches (914.4 mm) is required.

Modification 32

IQ Energy Sentinel

F-Frame three-pole (150A maximum)

J-Frame three-pole

K-Frame three-pole

33. Sub-Feed Breakers

Modification 33—Panel Types PRL1a, PRL2a, PRL3a One Breaker Per Panel

37. Time Clock Space Only

Includes box, trim, door and mounting pan.

Modification 37

Enclosure Type

Type 1

PRL1a, PRL2a, PRL3a (24-inch (609.6 mm) space)

PRL1a, PRL2a, PRL3a (36-inch (914.4mm) space)

Type 3R

PRL1a, PRL2a, PRL3a (24-inch (609.6 mm) space)

38. Touchup Paint

Modification 38

Description

12 oz. spray can. ANSI-61 light gray indoor

Case Lot of 12—12 oz. spray cans. ANSI-61 light gray indoor single style

Notes

- ① Refer to PRL4 layout.
- ② Refer to panelboard sizing charts.

39. Surge Protective Device (SPD)

Type PRL1a, PRL2a and PRL 3a and Panelboards

Package includes SPD unit connected to the panelboard bus.

Available for all enclosure types.

Sizing:

PRL1a, PRL2a: Add 7 inches (177.8 mm) to the standard box height.

PRL3a: Add 4X for 100–200 kA SPD units.

Type PRL4 and Elevator Control Panelboards

Package includes SPD unit and integral circuit breaker disconnect (30A) connected to the panel bus.

Available for all enclosure types.

The SPD unit and integral circuit breaker disconnect will require 7X of chassis space. (Only available in 36-inches (914.4 mm) or 44-inches (1117.6 mm) wide enclosure.)

40. Copper Wire Only Terminals for Molded Case Circuit Breakers

(To replace standard Al/Cu terminals.)

Modification 40

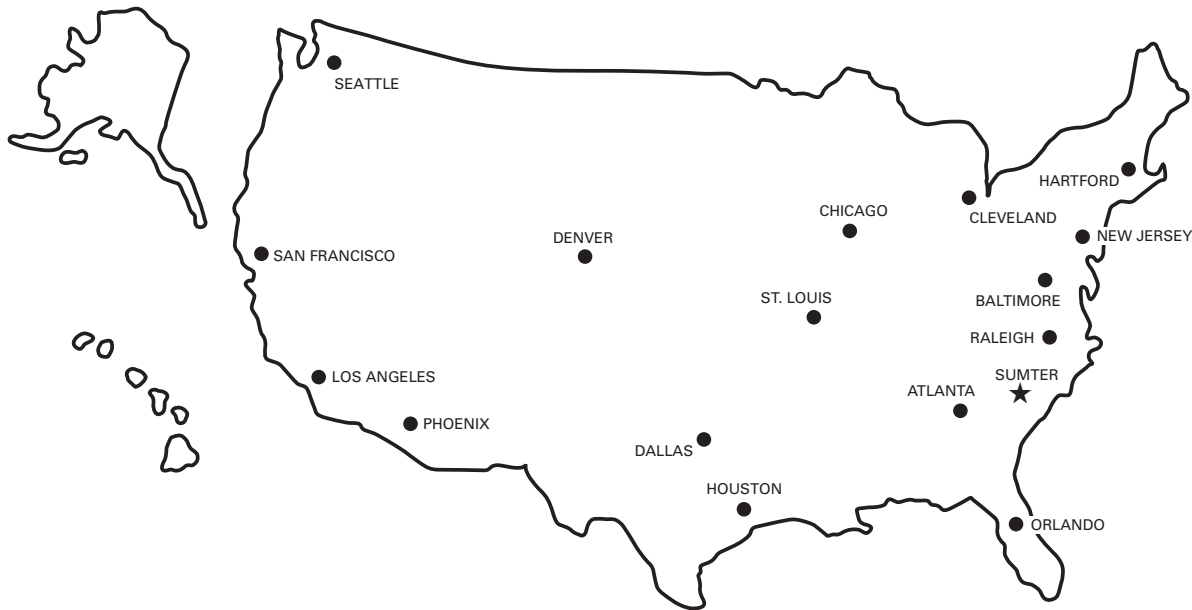

Breaker Frame	Maximum Breaker Ampere Rating	Terminal Material	Wire Range
F	225	Copper	#4–4/0
J	250	Stainless Steel	#4–350
K	225	Copper	(1) #3–350
	350	Copper	(1) 250–500
	400	Copper	(2) 3/0–250
L	600	Copper	(2) 250–500
M	600	Copper	(2) #2/0–500
	800	Copper	(3) #3/0–300
N	700	Copper	(2) #2/0–500
	1000	Copper	(3) #3/0–500
	1200	Copper	(4) #3/0–400

Note

- ① Requires 15A branch breaker for cable connection—three-pole (three-phase) or two-pole (single-phase). (Add breaker separately, not included in price.)

Satellites

A unique concept of facilities close to customer locations, assuring fast delivery of standard- and custom-assembled equipment *when it's needed.*

Located at strategic locations throughout the United States, these facilities manufacture and deliver standard or custom-assembled panelboards, switchboards and enclosed circuit breakers...when and where you need them. And, when you have an emergency, they can have your equipment ready in hours.

Highly trained and experienced personnel will manage your order and ensure that you receive on-time delivery of high quality equipment that meets your specifications.

Special Configurations

The unique capabilities of these plants and people can provide solutions for special products to meet special needs.

Typical examples include special dimensions, retrofit equipment and panelboard interiors to fit existing boxes.

Speedy Delivery

- Panelboards: from one to five days.
- Switchboards: between five and 10 days.
- Assembled Enclosed Circuit Breakers: from one to 10 days.

Save Time and Money

No matter your location, you will save time and money when ordering from a satellite. For more information, contact your Eaton representative or authorized distributor.

Additional Information

For information on reverse feed breaker applications, please see **Consulting Application Guide—Molded-Case Circuit Breakers & Enclosures**, CA08104001E, Tab 27.

Product Group Overview

Eaton has created several key support groups, for the direct purpose of providing the highest quality service available today in the renewable energy market segment. These valued-added support capabilities allow us to provide a level of service above all other manufacturers and regional independent organizations. Below is a description of the groups involved in completing any successful solar photovoltaic turnkey project from design through construction. Equipment startup and system commissioning and even long-term maintenance requirements are part of Eaton’s strengths.

Features

- Feasibility studies
- AC interconnection analysis
- DC and photovoltaic system engineering
- Turnkey construction
- Utility interconnection substations
- Equipment manufacturer
- Equipment and system commissioning
- Monitoring services
- Long term maintenance

Solar Renewable Analysis and Consultation

Product Overview

Eaton’s team can provide a cost-effective review with recommendations that maximizes solar renewable energy production. Eaton’s approach investigates all or some of the following:

- Analysis of solar production potential by applying various methods of fixed, tilt and tracking systems
- Analysis of electrical interconnect feasibility and power usage
- Analysis of term-term maintenance and monitoring options and associated costs
- Development of Life-Cycle-Cost-Analysis (LCCA) for potential solar sites
- Initial analysis via use of Google-Earth photographs if feasible
- If required, specific site visits to further investigate the above
- If required, site visual audit of electrical equipment operating conditions
- Establishing a “Solar Production Index” when evaluating multiple sites
- Identify any potential issues with equipment life expectancy and warranty fulfillment obligations

Our analysis starts with the following premises that have been communicated to us by developers:

- Need to maximize solar energy production with expected 20-year solar variations
- Estimated construction costs identified and technical opinion of project completion from a technical and construction standpoint
- Preliminary review of any potential civil or structural issues involving potential solar sites
- Best practice recommendations for long-term monitoring to ensure maximum uptime and energy production to match the financial model
- Need for experienced analysis of hardware supplied, life expectancy and potential issues with warranty fulfillment obligations
- Recommendations for ongoing maintenance, operations and failure response

Product Description

Eaton’s Electrical Services & Systems Group has extensive experience in electrical power distribution systems design, installation, start-up, commissioning, maintenance, trouble-shooting, life-extension and ongoing monitoring of operating parameters as well as failure indicators. We have added expertise and direct experience in the area of solar renewable energy projects, therefore providing developers and investors a non-biased technical review of potential solar sites.

Terms and Conditions

Eaton can provide the above services in accordance with Eaton Standard Terms and Conditions or other mutually acceptable terms at either a fixed price or a time-and-material basis. If you have any questions or requests, please contact your local Eaton Engineering Services & Systems office today.

Solar Design

Product Overview

Interconnection Analysis Services

Power system analysis services offer a focused and systematic approach to enhance performance and design, validate equipment selection, and simulate response to abnormal conditions. Typical analysis services performed during design of new renewable generation sites include:

- Short-Circuit Analysis— Calculation of the available short-circuit currents at equipment locations throughout the power system. Evaluation of equipment ratings ensures equipment can withstand, and, where applicable, interrupt an electrical fault. Results are critical for proper system design, including specification and selection of equipment
- Protective Device Coordination— Determination of necessary characteristics, ratings, and settings for electrical protective devices
- Arc Flash Analysis— Calculation of arc flash hazards associated with energized work at locations throughout the power system in accordance with NFPA 70E, IEEE1584, National Electric Safety Code, and Z462 requirements
- Load Flow Analysis— Analysis of the system’s capacity to supply electrical energy from the renewable energy source to the utility or customer under steady-state conditions, determination of appropriate continuous ratings for electrical equipment, and optimal placement and characteristics of reactive power compensation equipment
- Harmonic Analysis— Evaluation of harmonic currents on the electrical system introduced by the renewable energy source and application of harmonic mitigation equipment and design techniques

Solar Monitoring	V15-T2-77

- Transient Stability Analysis—Evaluation of dynamic behavior of the renewable source and system voltages during transient conditions such as system faults or start-up
- Switching Transient Analysis—Analysis of system behavior during switching conditions to identify possible damaging voltage transients. Results are used to design and specify mitigation equipment such as snubbers

Electrical Design Services

Eaton’s electrical design services can extend from the point of utility connect to the equipment. Design services are integrated with analysis services, resulting in a complete engineered solution. The level of design detail can be customized from minimal design consultation and advice to a complete design package with specifications and drawings.

Typical design services include:

- Distribution System Design—Design and specification of the electrical distribution system from the point of interconnection to generation equipment
- Substation Design— Complete substation design service is available, including ground grid analysis and design, substation layout, equipment specification, protection, and control
- Protection and Control— Design of advanced electrical protection and control including transmission line protection, system automation, advanced metering and smart grid capabilities

DC Engineering Services

One-line diagram of the power system is critical to support the system evaluation and analysis. The one-line diagram shows the identification and ratings of electrical equipment such as: transformers, cables, circuit breakers, protective relays, fuses, switches, current transformers, potential transformers, surge arresters, and so on. ANSI device numbers identify protective relay types. The one-line diagram is typically provided with each type of power system study. Electrical one-line diagram, showing DC and AC portions of the system, to include the following:

- Solar module manufacturer, type and catalog number; number of module strings, number of modules per string (DC)
- Make, model, DC kW rating of solar panels
- Make, model, AC kW rating of inverter(s)
- Make, model, voltage, and current interrupt rating of all AC and DC disconnect switches
- Make and model of all lightning arrestors and surge suppression equipment
- Make and model of combiner boxes and fuses
- Make, model and rating of all circuit breakers and electrical panels
- Make and model of the utility meter
- Size, insulation rating, and temperature rating of system wiring and nominal voltage present on each line

- Complete electrical circuit back to customer's utility connection. All customer electrical panels related to the PV system shall be shown. Such panels shall be labeled with the make, model, bus rating and customer designation. The main circuit breaker shall also be labeled with the make and rating (if applicable)
- Proper compliance with all authorities having jurisdiction
- Step up transformer, MV switchgear, and point of utility connection

Typical DC connection drawing, showing the following:

- Typical termination for a solar module string
- Typical panel to panel termination
- Typical combiner box termination
- Develop cable routing and interconnection details
- Step up transformer, MV switchgear, point of utility connection equipment
- Grounding plan

Equipment layout drawing(s), showing locations for the following:

- Solar modules
- Combiner boxes
- Disconnect switches
- Inverters
- Conduit routing
- Existing panel, switchboard, or switchgear connection
- Step up transformer, MV switchgear, point of utility connection arrangement

Cable and conduit schedule, to show:

- Cable/conduit ID
- From/To destinations
- Voltages, AC or DC
- Cable and conduit sizing
- Number of conductors/sets per phase
- Insulation type

Power Systems Engineering is an integral part of Eaton's electrical service capabilities. The combined Eaton Electrical Services & Systems team can provide a full scope of design and construction management services to support your project needs:

- Engineering and design
- Multi-vendor equipment supply
- Turnkey projects and construction management
- Installation services
- Power quality and load measurements
- Power quality investigation
- Energy management studies
- Renewable energy applications

Electrical Design Submittals

Eaton can prepare an equipment specification by using an approved single line diagram(s); knowledge of physical environment restrictions; the application of the electrical equipment; the equipment manufacturer's standards and options; the latest manufacturing industry standards; and a thorough knowledge of the latest local and national codes and regulations for installation of the equipment.

Eaton can develop equipment layout or arrangement plans that will identify the location of the equipment based upon the customer's physical restrictions. Once the equipment location has been determined, foundation designs, equipment grounding, and raceway routing designs will be developed and issued for approval.

Eaton can provide the following minimum design elements for the design deliverables:

- Title sheet
- Existing site plan
- PV array layout
- Electrical one-line diagram sheet
- Equipment location plan
- Equipment specifications
- 100% design drawings and other information as needed to enable accurate procurement and installation required to construct the project

Product Description

Eaton's Power System Engineering team is your ally to provide analysis and design for connecting renewable and alternative energy generation to the utility grid. Our experience and North American coverage make Eaton the choice to analyze and design the electrical distribution system and substation for wind and solar farm projects.

Our power system engineers bring extensive skills and expertise to power system analysis and design. Active participation in technical societies such as IEEE and collaboration with a variety of utilities and industries ensures that our engineers are knowledgeable about today's cutting edge engineering techniques.

Turnkey Services

Product Overview

Services for Solar Photovoltaic Power

Pre-installation services

- Solar site assessments including technical and financial analysis
- Solar system design including shading and annual kWh output analysis
- Photovoltaic panel selection
- Electrical balance of system design
- Monitoring system design (meters and software)
- Building connection and substation design

Installation services

- Solar photovoltaic panel installation
- Electrical balance of system installation
- Building infrastructure connection
- Utility grid interconnection up to 345 kV substations, synchronizing and controls
- Solar system commissioning and performance verification

PV System Commissioning

- Eaton can provide start up and commissioning services for the solar array, DC equipment, inverters and all AC equipment up to the point of connection
- Eaton can supply all test equipment and labor to properly test the PV system
- Eaton can complete the required field verification of the solar system components from the PV panels to the electrical AC grid connection. Acceptance will involve several steps starting at factory testing through final site system performance evaluations, with ongoing reporting and evaluation
- Eaton can supply complete close out documentation including final test reports, O&M manuals, training and as built drawings

Post-installation services

- Remote performance monitoring (metering and data collection)
- Ongoing energy production monitoring and rebate certifications

Solar Monitoring

Product Overview

PVGard® is a web-based solar monitoring system that can transmit via hard wire land lines or wireless communications from field acquired measurement parameters. Data parameters monitored and displayed can include but not be limited to the following measurements and displays:

Photovoltaic power output performance measurement transducers

- AC current and voltage
- DC current and voltage
- Kilowatt-hour meter

Meteorological data measurements

- Ambient air temperature
- Relative humidity
- Barometric pressure
- Wind speed
- Wind direction
- Rainfall
- Global horizontal irradiance
- Solar cell temperature

Real time data at minimal of 15 minute intervals

- AC current, voltage and kilowatt hours
- Solar plane of array irradiance
- Ambient temperature and wind speed

Calculated parameters

- AC power output
- Sunlight conversion efficiency to AC and DC power
- Inverter DC to AC power conversion efficiency
- Avoided pollutant emissions of CO₂, SO_x, and NO_x gases

Inverter monitored data

- Watt-hour
- AC and DC voltage and current
- AC frequency
- Cumulated watt-hours
- Inverter error codes
- Inverter conversion efficiency
- DC string level and re-combiner current monitoring

Inverter System Sensors—(Enhanced monitoring parameters)

- Internal equipment enclosure temperatures and humidity
- Internal dust/smoke alarm levels within enclosures
- Water intrusion detector (floor water)
- Breaker trip or operation
- Fan and heater circuit operation
- Load current of main circuit breakers
- Transformer monitoring and alarms
- Relay status/health and Inverter error codes alarming
- Safe-solar detection and protection
- Quarterly performance reports to be e-mailed to site personnel
- Alarm conditions will be e-mailed and text-message to site personnel/Eaton
- Alarm and operating conditions will be summarized in quarterly report
- Inverter health index

The monitoring and display software permits customization to incorporate descriptive text, schematic diagrams, and user-specific data.

PVGard also provides the capability to generate the following type of graphs:

- Average plots of irradiance
- Average plots of ambient temperature and module temperature
- Daily value or totals of energy production
- Peak daily power
- Peak daily module temperature
- Peak daily irradiance plot over a specific month
- Monthly values of energy production
- Incident solar irradiance
- Cumulated yearly voided emissions of CO₂, SO_x, and NO_x gases

The displayed data can also incorporate a looping background of pictures from the site, graphic overlays of the solar power generation in watts and watt-hours for each inverter. Other display capabilities:

- Project location on globe coordinates with zoom-in and out capability
- Current weather conditions
- Power generation from the total system and/or the individual solar power arrays
- Historic power generation
- Solar power system environmental impact
- Educational power point presentation (optional)
- Installed solar power electrical system overview and single line diagram

The display system can be capable of being programmed periodically to show additional information related to scheduled maintenance.

Product Description

Eaton's PVGuard Engineered Monitoring system is a web-based system that monitors and proactively manages PV array equipment, inverters, AC equipment and weather parameters. Eaton builds in custom algorithms to track multiple inputs in order to improve and maintain system performance. For example PVGuard alerts users to underperforming panels and can schedule maintenance on inverters when expected production values are shown to be lower than optimal performance.

Direct Current Circuit Breakers

Product Description

DC (direct current) systems and applications are becoming commonplace as alternative energy sources have expanded and the number of DC devices and data centers using DC power has swelled.

Eaton offers molded case circuit breakers and switches to meet circuit protection and switching requirements for a host of different DC end use requirements. Applications include UPS battery supply circuits, solar systems and electric vehicle charging, as well as commercial and industrial distribution.

Current ratings are available from 15 to 2500A, with a full scale of voltage and interrupting ratings to address needs ranging from standard to the highest performance. Optional internal accessories provide remote tripping and indication of breaker status.

The DC breaker family is UL® 489 listed and exceeds the requirements in UL 489 Supplement SC for UPS applications. Eaton breakers may be applied in both ungrounded and select grounded applications, with poles connected in series to operate at the maximum voltages shown on **Page V15-T3-3**. To use DC circuit breakers on 600V grounded systems, three poles in series must be connected on the ungrounded leg.

The HFDDC through HMDLDC DC breakers use the same internal and external accessories as their Series C or Series G AC frame equivalents. NBDC and PBDC use the same internal and external accessories as standard NB and PB breakers.

Many of the Eaton AC molded case circuit breakers carry 250 Vdc ratings for ungrounded systems. Refer to **Volume 4—Circuit Protection**, CA08100005E, Tab 2 for these interrupting tables.

HMDLDC	800	—	—	—	—	—	—	20	10	3

Notes

^① DC ratings apply to substantially non-inductive circuits. Time constants per UL 489.

^② EGEDC through HMDLDC have been tested up to 300 Vdc to allow for battery charging voltages. 750 Vdc is common in transportation applications. HFDDC, four-pole 750 Vdc is available up to 150A maximum. 300 Vdc and 750 Vdc are not UL 489 listed voltage ratings.

^③ Four-pole frame with two-poles connected in parallel.

See **Page V15-T3-14** for series connection diagrams. Use NEC[®] rated cable to connect/short poles in series as shown.

Molded Case Switches

Eaton's DC molded case switches are used in applications requiring a compact, high-capacity disconnect. They are UL 489 listed and have automatic high instantaneous current protection. These devices do not provide overload protection.

Note

① F-Frame circuit breakers are factory sealed. Underwriters Laboratories requires that internal accessories be installed at the factory. Internal accessories are UL listed for factory installation under E7819. Where local codes and standards permit and UL listing is not required, internal accessories can be field installed. Accessory installation should be done before the circuit breaker is mounted and connected.

One accessory can be mounted per pole, per breaker. Factory installation of accessories is available. Contact Eaton for assistance with part number configuration.

Jumpers

Jumpers must be ordered separately. Priced individually.

Direct Current Circuit Breakers

Specialty Breakers

Wiring Diagrams

Series Connection Diagrams for DC Application ①②

3

250 Vdc Maximum—Two Poles in Series

Suitable for use on ungrounded systems, or grounded systems that have one end of load (A) connected to grounded terminal, opposite poles in series connection.

Suitable for use on ungrounded systems only.

500 Vdc or 600 Vdc Maximum—Three Poles in Series

Suitable for use on ungrounded systems, or grounded systems that have one end of load (A) connected to grounded terminal, opposite poles in series connection.

Suitable for use on ungrounded systems only.

750 Vdc Maximum—Four Poles in Series

Suitable for use on ungrounded systems, or grounded systems that have one end of load (A) connected to grounded terminal, opposite poles in series connection.

Suitable for use on ungrounded systems only.

Notes

- ① Poles in series connection is customer supplied. Use rated cable per NEC.
- ② For grounded systems, all poles in series must be connected on non-grounded terminal, with load connected to grounded terminal.

PVGard Solar Circuit Breakers—600 Vdc Per-Pole and 1000 Vdc Poles-in-Series

Product Overview

- Two PVGard lineups
 - 600 Vdc per-pole breaker and switch. Each pole rated 600 Vdc
 - 1000 Vdc poles-in-series breaker and switch. Requires poles in series connection
- Both options UL 489B listed for solar photovoltaic circuit protection
- 50°C calibration
- Offers both 100% and 80% rated breakers
- Handle bi-directional current flow

Product Description

Photovoltaic (PV) systems convert the energy of the sun into electrical power that is fed directly into the electric grid. Within the balance of system (BOS), direct current (DC) circuit breakers protect the wiring connected from the PV modules to the combiner or the inverter, while also behaving as a disconnect.

Eaton is a global leader in circuit protection and brings this expertise to bear in the photovoltaic market. PVGard solar circuit breakers are part of a product family that combines a disconnect with circuit protection in a single, compact, resettable device to protect and isolate DC circuits as needed in photovoltaic systems. PVGard breakers can replace fuses, fuse holders and disconnects in combiner box and inverter applications—saving space, streamlining design, purchasing and receiving, and reducing spare parts requirements.

There are two PVGard lineups to choose from: the industry-exclusive, 600 Vdc per-pole breakers and switches designed for residential and light commercial applications and 1000 Vdc poles-in-series breakers and switches for commercial and utility scale applications.

PVGard 600 Vdc Per-Pole Lineup

Only Eaton can offer this breakthrough breaker that will save significant space, time and cost. As a single-circuit-per-pole device, it allows space savings of up to 66% when compared to traditional poles-in-series disconnects, switches and breakers. In addition, it eliminates the need for jumpers for poles-in-series connection—saving on installation time, labor and even inventory.

PVGard 1000 Vdc Poles-in-Series Lineup

This 1000 Vdc poles-in-series lineup provides reliable and safe disconnect means and overcurrent protection in a single, compact device for commercial and utility scale PV systems. This solution does not require jumpers with the breaker/switch to be a UL 489B listed device, providing reliability and flexibility in design without limitation on implementation of the breaker/switch. If needed, cost-effective Eaton jumpers can be included.

Application Description

Photovoltaic (PV) systems convert the energy of the sun into electrical power that is fed directly into the electric grid. PVGard circuit breakers are used to protect the wiring from the modules to the combiner box or inverter from overcurrents, and to provide an isolation mechanism.

Eaton offers a complete line of UL 489 Listed multi-purpose 600 Vdc poles-in-series breakers and switches, as well as protection for the AC side of the inverter.

Features

PVGard breakers are uniquely designed with these features:

- Meets the higher voltage and lower fault current levels of solar systems
- Tested to extreme ambient conditions from -40°C to $+90^{\circ}\text{C}$
- Full complement of accessories for status, signalling, and on/off operation remotely
- Can handle bi-directional flow of current
- Can be applied in grounded, ungrounded or bi-polar systems
- Meets and exceeds the standards of UL 489B for photovoltaic molded case circuit breakers and molded case switches
- Available both standard (80%-rated) and 100%-rated breakers
- 50°C calibration
- Ability to open on signal from DC arc or ground fault detector
- Wide range of current ratings increases options for matching incoming strings
- Eliminates fuse stocking costs and matching issues

Designed specifically for high- and low-temperature demands of PV installations, PVGard circuit breakers undergo extreme ambient cycling tests, and carry a robust operating temperature range. Trip units calibrate at 100% and 80% of nameplate current in a 50°C ambient, ensuring continuous operation in higher temperature environments typical to solar.

Rigorous third-party testing includes limited and standard fault current tests, electrical and mechanical endurance, di-electric voltage withstand and temperature tests. Eaton's PVGard products are stand-alone devices without requiring jumpers to be UL 489B listed devices.

PVGard breakers are available with a full complement of accessories to provide string status, enable remote trip, on/off operation, and can be customized to site requirements.

Standards and Certifications

- Designed to meet UL 489B for solar photovoltaic circuit protection
- UL File E350638, Category Control Number DIUR

Molded Case Switches

Eaton's DC molded case switches (MCS) are used in applications requiring a compact, high capacity disconnect. PVGard 1000 Vdc

MCS are UL 489B listed and have automatic instantaneous current protection. These devices do not provide overload protection.

Notes

① Underwriters Laboratories requires that internal accessories for the FD PV be installed at the factory. Internal accessories are UL listed for factory installation under E7819. Where local codes and standards permit and UL listing is not required, internal accessories can be field installed. Accessory installation should be done before the circuit breaker is mounted and connected.

One accessory can be mounted per pole, per breaker.

Technical Data and Specifications

- Thermal-magnetic circuit breakers
- Designed to meet UL 489B for solar photovoltaic circuit protection
- 100% rated of the continuous current rating
- 50°C calibrated
- Can be applied in grounded, ungrounded or bi-polar systems
- Ability to open on signal from DC arc or ground fault detector
- Two PVGard lineups
 - UL File EE350638, Category Control Number DIUR
 - 600 Vdc per-pole breaker and switch
 - Each pole rated 600 Vdc
 - 1000 Vdc poles-in-series breaker and switch
 - Requires poles in series connection

3

JF PVS, KD PVS—600 Vdc Per-Pole

Suitable for grounded or ungrounded systems.
Suitable for quantity (3) 600 Vdc circuits.

FD PV, KD PV, LG PV—1000 Vdc Maximum—Four Poles-in-Series

Suitable for use on ungrounded systems, or grounded systems that have one end of load (A) connected to grounded terminal, opposite poles in series connection.

Suitable for use on ungrounded systems only.

MDL PV—1000 Vdc Maximum—Three Poles in Series

Suitable for use on ungrounded systems, or grounded systems that have one end of load (A) connected to grounded terminal, opposite poles in series connection.

Suitable for use on ungrounded systems only.

Notes

- ① Poles in series connection is customer supplied. Use rated cable per NEC.
- ② For grounded systems, all poles in series must be connected on non-grounded terminal, with load connected to grounded terminal.

Description

DC Switch Disconnectors	
Product Selection	V15-T3-30
Technical Data and Specifications	V15-T3-34
Dimensions	V15-T3-37

DC Switch Disconnectors

Product Description

Switch disconnectors N...DC in the special version for up to 1500 Vdc can be used on single- or two-poles. They comply with the isolation properties for earthed IT networks. Accessories, such as bridge kits, connection terminals and door coupling rotary handles, enable individual installation in the most varied types of distribution systems. Auxiliary switches, voltage releases and remote operators facilitate signalling and automation.

Application Description

- Switch disconnectors for nominal system voltage up to 1500 Vdc
- Suitable for cabinets with ambient temperatures up to 70°C
- Main switch before DC/AC converter fulfills NEC requirements
- Safely switching in combiner boxes enables effective operation in case of maintenance with breaking capacity under load up to 4x nominal current
- Bi-directional functionality of switch contacts for array protection suitable for grounded or ungrounded systems

Features

- Switch disconnectors N can be combined with voltage releases NZM...-XU, NZM...-XA and auxiliary contacts, as well as with remote operator NZM...-XR
- For DC switching, series connection of all four current paths is needed
- Standard equipment: screw-type connection, frame terminal available as an option
- For non-earthed networks (e.g., IT), the installation must be configured such that the likelihood of a double earth fault is negligibly small
- Switches can not be combined with withdrawable units and/or connection on rear
- N4-4...S15-DC supply from the bottom only

Standards and Certifications

- IEC/EN 60947-3
- Main switch characteristics including positive drive to IEC/EN 60204 and VDE 0113
- Isolating characteristics to IEC/EN 60947 and VDE 0660
- Busbar tag shroud to VDE 0160 Part 100

Note: N...S1-DC and N...S15-DC cannot be combined with plug-in or withdrawable units and/or in case of rear connection.

Central Fitting Position

IT Network Including the Possibility of a Double-Ground Fault

In ungrounded networks (for example, IT) the installation has to be done in a way to keep the likelihood of a double-ground fault neglectably low.

Depending on the use of jumper kits and on the layout of the single- or two-pole circuit, the following maximum rated operating voltage levels have to be respected to make sure that—even in case of a double-ground fault—safe switch-on and switch-off is possible in accordance with utilization category DC22-A.

Rated Operating Voltage U_e Maximum IT Network

**Contents****Description**

DC Switches

DC Switches**Product Description**

Eaton's new offering of PV switches have multiple poles factory-wired, and they are approved for NEC Article 690 applications right from the box. Other manufacturers require the contractor to add jumpers to a two- or three-pole switch, add a neutral, and add labels to meet this requirement. For fusible switches, the new Eaton PV switch requires only one fuse per switch—saving the customer at least one fuse on each switch.

For more information on Eaton's DC Switches, please see **Tab 2.4** of this catalog.

DC Switched Combiners**Contents****Description**

DC Switched Combiners

3**DC Switched Combiners****Product Description**

The Eaton switched combiner (ESC) unites Eaton's 600 Vdc solar disconnect and source-combiner box in one convenient enclosure (1000 Vdc Switched Combiners available late 2012).

For more information on Eaton's DC Switched Combiners, please see **Tab 2.5** of this catalog.

Ventilated Transformers/ Open Core-Coil Assemblies	V15-T3-43

Encapsulated Transformers

Product Description

Eaton's family of encapsulated transformers is ideally suited for harsh outdoor environments.

Their standard enclosure is NEMA® 3R rated, and are also available in NEMA 3R stainless steel, or NEMA 4X enclosures. The core and coil assembly is completely embedded in a sand and resin compound that seals out moisture and other contaminants.

Please refer to **Volume 2—Commercial Distribution**, CA08100003E, Tab 2 for more information.

V15-T3-42

Ventilated Transformers/Open Core-Coil Assemblies

Product Description

Eaton offers a complete line of ventilated and totally enclosed non-ventilated transformers, in a variety of K-factor ratings and efficiency levels. Please refer to **Volume 2—Commercial Distribution**, CA08100003E, Tab 2 for additional information on Eaton's standard product offering.

In addition to these standard products, Eaton also offers custom design capabilities to meet the specific requirements of the solar industry. We offer special dimensions and layouts to meet a specific customer's needs. We can also design transformers to meet CEC weighted-efficiency levels, or other efficiency levels if necessary. Please contact your local Eaton representative for additional information on Eaton's custom design capabilities.

Terms and Conditions of Sale	V15-A1-1
Terms of Payment	V15-A1-2
Freight	V15-A1-3
Warranty	V15-A1-3

Selling Policy (Supersedes Selling Policy 25-000, dated November 1, 2008)

Terms and Conditions of Sale

The Terms and Conditions of Sale set forth herein, and any supplements which may be attached hereto, constitute the full and final expression of the contract for the sale of products or services (hereinafter referred to as Product(s) or Services by Eaton Corporation (hereinafter referred to as Seller) to the Buyer, and supersedes all prior quotations, purchase orders, correspondence or communications whether written or oral between the Seller and the Buyer. Notwithstanding any contrary language in the Buyer's purchase order, correspondence or other form of acknowledgment, Buyer shall be bound by these Terms and Conditions of Sale when it sends a purchase order or otherwise indicates acceptance of this contract, or when it accepts delivery from Seller of the Products or Services.

THE CONTRACT FOR SALE OF THE PRODUCTS OR SERVICES IS EXPRESSLY LIMITED TO THE TERMS AND CONDITIONS OF SALE STATED HEREIN. ANY ADDITIONAL OR DIFFERENT TERMS PROPOSED BY BUYER ARE REJECTED UNLESS EXPRESSLY AGREED TO IN WRITING BY SELLER. No contract shall exist except as herein provided.

Complete Agreement

No amendment or modification hereto nor any statement, representation or warranty not contained herein shall be binding on the Seller unless made in writing by an authorized representative of the Seller. Prior dealings, usage of the trade or a course of performance shall not be relevant to determine the meaning of this contract even though the accepting or acquiescing party had knowledge of the nature of the performance and opportunity for objection.

Quotations

Written quotations are valid for 30 days from its date unless otherwise stated in the quotation or terminated sooner by notice.

Verbal quotations, unless accepted, expire the same day they are made.

A complete signed order must be received by Seller within 20 calendar days of notification of award, otherwise the price and shipment will be subject to re-negotiation.

Termination and Cancellation

Products

Any order may be terminated by the Buyer only by written notice and upon payment of reasonable termination charges, including all progress billings and all incurred direct manufacturing costs.

Services

Any order may be terminated by the Buyer only by written notice and upon payment of reasonable termination charges including all costs plus profit.

Seller shall have the right to cancel any order at any time by written notice if Buyer breaches any of the terms hereof, becomes the subject of any proceeding under state or federal law for the relief of debtors, or otherwise becomes insolvent or bankrupt, generally does not pay its debts as they become due or makes an assignment for the benefit of creditors.

Appendix 1—General Terms and Conditions of Sale

Effective Date: November 1, 2017

Prices

All prices are subject to change without notice. In the event of a price change, the effective date of the change will be the date of the new price or discount sheet, letter or telegram. All quotations made or orders accepted after the effective date will be on the new basis. For existing orders, the price of the unshipped portion of an order will be the price in effect at time of shipment.

Price Policy—Products and Services

When prices are quoted as firm for quoted shipment, they are firm provided the following conditions are met:

1. The order is released with complete engineering details.
2. Shipment of Products are made, and Services purchased are provided within the quoted lead time.
3. When drawings for approval are required for any Products, the drawings applicable to those Products must be returned within 30* calendar days from the date of the original mailing of the drawings by Seller. The return drawings must be released for manufacture and shipment and must be marked "APPROVED" or "APPROVED AS NOTED." Drawing re-submittals which are required for any other reason than to correct Seller errors will not extend the 30-day period.

* 60 days for orders through contractors to allow time for their review and approval before and after transmitting them to their customers.

If the Buyer initiates or in any way causes delays in shipment, provision of Services or return of approval drawings beyond the periods stated above, the price of the Products or Services will be increased 1% per month or fraction thereof up to a maximum of 18 months from the date of the Buyer's order. For delays resulting in shipment or provision of Services beyond 18 months from the date of the Buyer's order, the price must be renegotiated.

Price Policy—BLS

Refer to Price Policy 25-050.

Minimum Billing

Orders less than \$1,000 will be assessed a shipping and handling charge of 5% of the price of the order, with a minimum charge of \$25.00 unless noted differently on Product discount sheets.

Taxes

The price does not include any taxes. Buyer shall be responsible for the payment of all taxes applicable to, or arising from the transaction, the Products, its sale, value, or use, or any Services performed in connection therewith regardless of the person or entity actually taxed.

Terms of Payment

Products

Acceptance of all orders is subject to the Buyer meeting Seller's credit requirements. Terms of payment are subject to change for failure to meet such requirements. Seller reserves the right at any time to demand full or partial payment before proceeding with a contract of sale as a result of changes in the financial condition of the Buyer. Terms of Payment are either Net 30 days from the date of invoice of each shipment or carry a cash discount based on Product type. Specific payment terms for Products are outlined in the applicable Product discount schedules.

Services

Terms of payment are net within 30 days from date of invoice for orders amounting to less than \$50,000.00.

Terms of payment for orders exceeding \$50,000.00 shall be made according to the following:

1. Twenty percent (20%) of order value with the purchase order payable 30 days from date of invoice.
2. Eighty percent (80%) of order value in equal monthly payments over the performance period payable 30 days from date of invoice.

Except for work performed (i) under a firm fixed price basis or (ii) pursuant to terms of a previously priced existing contract between Seller and Buyer, invoices for work performed by Seller shall have added and noted on each invoice a charge of 3% (over and above the price of the work) which is related to Seller compliance with present and proposed environmental, health, and safety regulations associated with prescribed requirements covering hazardous materials management and employee training, communications, personal protective equipment, documentation and record keeping associated therewith.

Adequate Assurances

If, in the judgment of Seller, the financial condition of the Buyer, at any time during the period of the contract, does not justify the terms of payment specified, Seller may require full or partial payment in advance.

Delayed Payment

If payments are not made in accordance with these terms, a service charge will, without prejudice to the right of Seller to immediate payment, be added in an amount equal to the lower of 1.5% per month or fraction thereof or the highest legal rate on the unpaid balance.

Freight

Freight policy will be listed on the Product discount sheets, or at option of Seller one of the following freight terms will be quoted.

F.O.B.—P/S—Frt./Ppd. and Invoiced

Products are sold F.O.B. point of shipment freight prepaid and invoiced to the Buyer.

F.O.B.—P/S—Frt./Ppd. and Allowed

Products sold are delivered F.O.B. point of shipment, freight prepaid and included in the price.

F.O.B. Destination—Frt./Ppd. and Allowed

At Buyer's option, Seller will deliver the Products F.O.B. destination freight prepaid and 2% will be added to the net price.

The term "freight prepaid" means that freight charges will be prepaid to the accessible common carrier delivery point nearest the destination for shipments within the United States and Puerto Rico unless noted differently on the Product discount sheets. For any other destination, contact Seller's representative.

Shipment and Routing

Seller shall select the point of origin of shipment, the method of transportation, the type of carrier equipment and the routing of the shipment.

If the Buyer specifies a special method of transportation, type of carrier equipment, routing, or delivery requirement, Buyer shall pay all special freight and handling charges.

When freight is included in the price, no allowance will be made in lieu of transportation if the Buyer accepts shipment at factory, warehouse, or freight station or otherwise supplies its own transportation.

Risk of Loss

Risk of loss or damage to the Products shall pass to Buyer at the F.O.B. point.

Concealed Damage

Except in the event of F.O.B. destination shipments, Seller will not participate in any settlement of claims for concealed damage.

When shipment has been made on an F.O.B. destination basis, the Buyer must unpack immediately and, if damage is discovered, must:

1. Not move the Products from the point of examination.
2. Retain shipping container and packing material.
3. Notify the carrier in writing of any apparent damage.
4. Notify Seller representative within 72 hours of delivery.
5. Send Seller a copy of the carrier's inspection report.

Witness Tests/Customer Inspection

Standard factory tests may be witnessed by the Buyer at Seller's factory for an additional charge calculated at the rate of \$2,500 per day (not to exceed eight (8) hours) per Product type. Buyer may final inspect Products at the Seller's factory for \$500 per day per Product type.

Witness tests will add one (1) week to the scheduled shipping date. Seller will notify Buyer fourteen (14) calendar days prior to scheduled witness testing or inspection. In the event Buyer is unable to attend, the Parties shall mutually agree on a rescheduled date. However, Seller reserves the right to deem the witness tests waived with the right to ship and invoice Products.

Held Orders

For any order held, delayed or rescheduled at the request of the Buyer, Seller may, at its sole option (1) require payment to be based on any reasonable basis, including but not limited to the contract price, and any additional expenses, or cost resulting from such a delay; (2) store Products at the sole cost and risk of loss of the Buyer; and/or (3) charge to the Buyer those prices under the applicable price policy. Payment for such price, expenses and costs, in any such event, shall be due by Buyer within thirty (30) days from date of Seller's invoice. Any order so held delayed or rescheduled beyond six (6) months will be treated as a Buyer termination.

Drawing Approval

Seller will design the Products in line with, in Seller's judgment, good commercial practice. If at drawing approval Buyer makes changes outside of the design as covered in their specifications, Seller will then be paid reasonable charges and allowed a commensurate delay in shipping date based on the changes made.

Drawing Re-Submittal

When Seller agrees to do so in its quotation, Seller shall provide Buyer with the first set of factory customer approval drawing(s) at Seller's expense. The customer approval drawing(s) will be delivered at the quoted delivery date. If Buyer requests drawing changes or additions after the initial factory customer approval drawing(s) have been submitted by Seller, the Seller, at its option, may assess Buyer drawing charges. Factory customer approval drawing changes required due to misinterpretation by Seller will be at Seller's expense. Approval drawings generated by Bid Manager are excluded from this provision.

Warranty

Warranty for Products

Seller warrants that the Products manufactured by it will conform to Seller's applicable specifications and be free from failure due to defects in workmanship and material for one (1) year from the date of installation of the Product or eighteen (18) months from the date of shipment of the Product, whichever occurs first.

In the event any Product fails to comply with the foregoing warranty, Seller will, at its option, either (a) repair or replace the defective Product, or defective part or component thereof, F.O.B. Seller's facility freight prepaid, or (b) credit Buyer for the purchase price of the Product. All warranty claims shall be made in writing.

Seller requires all non-conforming Products be returned at Seller's expense for evaluation unless specifically stated otherwise in writing by Seller.

This warranty does not cover failure or damage due to storage, installation, operation or maintenance not in conformance with Seller's recommendations and industry standard practice or due to accident, misuse, abuse or negligence. This warranty does not cover reimbursement for labor, gaining access, removal, installation, temporary power or any other expenses, which may be incurred in connection with repair or replacement.

This warranty does not apply to equipment not manufactured by Seller. Seller limits itself to extending the same warranty it receives from the supplier.

Appendix 1—General Terms and Conditions of Sale

Effective Date: November 1, 2017

Extended Warranty for Products

If requested by the Buyer and specifically accepted in writing by Seller, the foregoing standard warranty for Products will be extended from the date of shipment for the period and price indicated below:

- 24 months—2% of Contract Price
- 30 months—3% of Contract Price
- 36 months—4% of Contract Price

Special Warranty (In and Out) for Products

If requested by the Buyer and specifically accepted in writing by Seller, Seller will, during the warranty period for Products, at an additional cost of 2% of the contract price, be responsible for the direct cost of:

1. Removing the Product from the installed location.
2. Transportation to the repair facility and return to the site.
3. Reinstallation on site.

The total liability of Seller for this Special Warranty for Products is limited to 50% of the contract price of the particular Product being repaired and excludes expenses for removing adjacent apparatus, walls, piping, structures, temporary service, etc.

Warranty for Services

Seller warrants that the Services performed by it hereunder will be performed in accordance with generally accepted professional standards.

The Services, which do not so conform, shall be corrected by Seller upon notification in writing by the Buyer within one (1) year after completion of the Services.

Unless otherwise agreed to in writing by Seller, Seller assumes no responsibility with respect to the suitability of the Buyer's, or its customer's, equipment or with respect to any latent defects in equipment not supplied by Seller. This warranty does not cover damage to Buyer's, or its customer's, equipment, components or parts resulting in whole or in part from improper maintenance or operation or from their deteriorated condition. Buyer will, at its cost, provide Seller with unobstructed access to the defective Services, as well as adequate free working space in the immediate vicinity of the defective Services and such facilities and systems, including, without limitation, docks, cranes and utility disconnects and connects, as may be necessary in order that Seller may perform its warranty obligations. The conducting of any tests shall be mutually agreed upon and Seller shall be notified of, and may be present at, all tests that may be made.

Warranty for Power Systems Studies

Seller warrants that any power systems studies performed by it will conform to generally accepted professional standards. Any portion of the study, which does not so conform, shall be corrected by Seller upon notification in writing by the Buyer within six (6) months after completion of the study. All warranty work shall be performed in a single shift straight time basis Monday through Friday. In the event that the study requires correction of warranty items on an overtime schedule, the premium portion of such overtime shall be for the Buyer's account.

Limitation on Warranties for Products, Services and Power Systems Studies

THE FOREGOING WARRANTIES ARE EXCLUSIVE EXCEPT FOR WARRANTY OF TITLE. SELLER DISCLAIMS ALL OTHER WARRANTIES INCLUDING ANY IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

CORRECTION OF NON-CONFORMITIES IN THE MANNER AND FOR THE PERIOD OF TIME PROVIDED ABOVE SHALL CONSTITUTE SELLER'S SOLE LIABILITY AND BUYER'S EXCLUSIVE REMEDY FOR FAILURE OF SELLER TO MEET ITS WARRANTY OBLIGATIONS, WHETHER CLAIMS OF THE BUYER ARE BASED IN CONTRACT, IN TORT (INCLUDING NEGLIGENCE OR STRICT LIABILITY), OR OTHERWISE.

Asbestos

Federal Law requires that building or facility owners identify the presence, location and quantity of asbestos containing material (hereinafter "ACM") at work sites. Seller is not licensed to abate ACM. Accordingly, for any contract which includes the provision of Services, prior to (i) commencement of work at any site under a specific Purchase Order, (ii) a change in the work scope of any Purchase Order, the Buyer will certify that the work area associated with the Seller's scope of work includes the handling of Class II ACM, including but not limited to generator wedges and high temperature gaskets which include asbestos materials. The Buyer shall, at its expense, conduct abatement should the removal, handling, modification or reinstallation, or some or all of them, of said Class II ACM be likely to generate airborne asbestos fibers; and should such abatement affect the cost of or time of performance of the work, then Seller shall be entitled to an equitable adjustment in the schedule, price and other pertinent affected provisions of the contract.

Compliance with Nuclear Regulation

Seller's Products are sold as commercial grade Products not intended for application in facilities or activities licensed by the United States Nuclear Regulatory Commission for atomic purposes. Further certification will be required for use of the Products in any safety-related application in any nuclear facility licensed by the U.S. Nuclear Regulatory Commission.

Returning Products

Authorization and shipping instructions for the return of any Products must be obtained from Seller before returning the Products.

When return is occasioned due to Seller error, full credit including all transportation charges will be allowed.

Product Notices

Buyer shall provide the user (including its employees) of the Products with all Seller supplied Product notices, warnings, instructions, recommendations, and similar materials.

Force Majeure

Seller shall not be liable for failure to perform or delay in performance due to fire, flood, strike or other labor difficulty, act of God, act of any governmental authority or of the Buyer, riot, embargo, fuel or energy shortage, car shortage, wrecks or delays in transportation, or due to any other cause beyond Seller's reasonable control. In the event of delay in performance due to any such cause, the date of delivery or time for completion will be extended by a period of time reasonably necessary to overcome the effect of such delay.

Liquidated Damages

Contracts which include liquidated damage clauses for failure to meet shipping or job completion promises are not acceptable or binding on Seller, unless such clauses are specifically accepted in writing by an authorized representative of the Seller at its headquarters office.

Patent Infringement

Seller will defend or, at its option, settle any suit or proceeding brought against Buyer, or Buyer's customers, to the extent it is based upon a claim that any Product or part thereof, manufactured by Seller or its subsidiaries and furnished hereunder, infringes any United States patent, other than a claim of infringement based upon use of a Product or part thereof in a process, provided Seller is notified in reasonable time and given authority, information and assistance (at Seller's expense) for the defense of same. Seller shall pay all legal and court costs and expenses and court-assessed damages awarded therein against Buyer resulting from or incident to such suit or proceeding. In addition to the foregoing, if at any time Seller determines there is a substantial question of infringement of any United States patent, and the use of such Product is or may be enjoined, Seller may, at its option and expense: either (a) procure for Buyer the right to continue using and selling the Product; (b) replace the Product with non-infringing apparatus; (c) modify the Product so it becomes non-infringing; or (d) as a last resort, remove the Product and refund the purchase price, equitably adjusted for use and obsolescence. In no case does Seller agree to pay any recovery based upon its Buyer's savings or profit through use of Seller's Products whether the use be special or ordinary. The foregoing states the entire liability of Seller for patent infringement.

The preceding paragraph does not apply to any claim of infringement based upon: (a) any modification made to a Product other than by Seller; (b) any design and/or specifications of Buyer to which a Product was manufactured; or (c) the use or combination of Product with other products where the Product does not itself infringe. As to the above-identified claim situations where the preceding paragraph does not apply, Buyer shall defend and hold Seller harmless in the same manner and to the extent as Seller's obligations described in the preceding paragraph. Buyer shall be responsible for obtaining (at Buyer's expense) all license rights required for Seller to be able to use software products in the possession of Buyer where such use is required in order to perform any Service for Buyer.

With respect to a Product or part thereof not manufactured by Seller or its subsidiaries, Seller will attempt to obtain for Buyer, from the supplier(s), the patent indemnification protection normally provided by the supplier(s) to customers.

Compliance with OSHA

Seller offers no warranty and makes no representation that its Products comply with the provisions or standards of the Occupational Safety and Health Act of 1970, or any regulation issued thereunder. In no event shall Seller be liable for any loss, damage, fines, penalty or expenses arising under said Act.

Limitation of Liability

THE REMEDIES OF THE BUYER SET FORTH IN THIS CONTRACT ARE EXCLUSIVE AND ARE ITS SOLE REMEDIES FOR ANY FAILURE OF SELLER TO COMPLY WITH ITS OBLIGATIONS HEREUNDER.

NOTWITHSTANDING ANY PROVISION IN THIS CONTRACT TO THE CONTRARY, IN NO EVENT SHALL SELLER BE LIABLE IN CONTRACT, IN TORT (INCLUDING NEGLIGENCE OR STRICT LIABILITY) OR OTHERWISE FOR DAMAGE TO PROPERTY OR EQUIPMENT OTHER THAN PRODUCTS SOLD HEREUNDER, LOSS OF PROFITS OR REVENUE, LOSS OF USE OF PRODUCTS, COST OF CAPITAL, CLAIMS OF CUSTOMERS OF THE BUYER OR ANY SPECIAL, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES WHATSOEVER, REGARDLESS OF WHETHER SUCH POTENTIAL DAMAGES ARE FORESEEABLE OR IF SELLER HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

THE TOTAL CUMULATIVE LIABILITY OF SELLER ARISING FROM OR RELATED TO THIS CONTRACT WHETHER THE CLAIMS ARE BASED IN CONTRACT, IN TORT (INCLUDING NEGLIGENCE OR STRICT LIABILITY) OR OTHERWISE, SHALL NOT EXCEED THE PRICE OF THE PRODUCT OR SERVICES ON WHICH SUCH LIABILITY IS BASED.
